Market Commentary

Platts Brazil Diesel Daily Commentary

- ULSD assessments diverge across regions
- Market waits for new subsidy on ULSD prices
- NYMEX futures surge on Middle East conflict

Brazilian ultra low sulfur diesel spot prices were mixed at the start of the week, as market participants adopted a wait-and-see stance following the holiday and the announcement of a new government subsidy mechanism.

Trading activity remained subdued across most locations as buyers and sellers assessed the implications of the new pricing framework amid heightened volatility in both NYMEX ULSD futures and the foreign exchange market.

According to market participants, uncertainty surrounding the implementation of the subsidy program, combined with sharp swings in international prices and exchange rates, continued to cloud price discovery and limit spot market activity. As a result, regional price movements diverged, reflecting local supply and demand conditions and varying expectations regarding replacement costs and future pricing trends.

Platts' assessment in the South and Southeast regions fell day over day amid lower reported prices and trades below the previous session. In Paranagua, Platts assessed the FCA price at 4,502.30 reais/cubic meter, down 490 reais/cubic meter, and reflecting a premium of 1,200 reais/cubic meter over Petrobras' posted price. The assessment considered a trade reported early in the day at 1,200 reais/cubic meter. In Santos, Platts' assessment followed the same trend, retreating 490 reais/cubic meter to 4,531.10 reais/cubic meter, reflecting a premium of 1,200 reais/cubic meter over Petrobras' posted price.

DAP Paranagua (all-origin) vs NYMEX	AGPAA00	-47.500	+5.750

Meanwhile, in the North and Northeast, Platts assessments rose day over day, tracking the rally in NYMEX ULSD futures and supported by firm demand fundamentals, which raised offer prices. Although uncertainty surrounding replacement costs persisted, market participants said higher international prices continued to underpin regional values and support firmer offer indications.

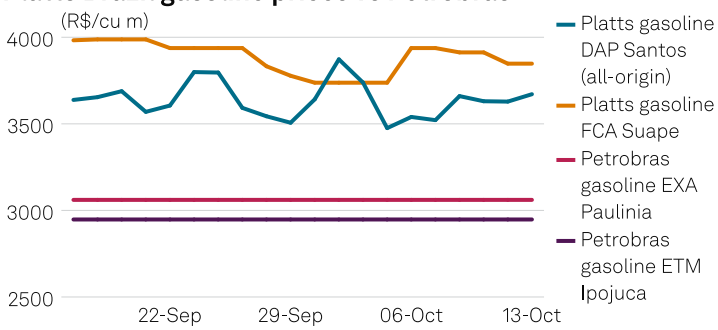

Platts assessed FCA Itaqui at 5,243 reais/cubic meter and FCA Suape at 5,257.40 reais/cubic meter, up 210 reais/cubic meter

day over day. Both locations reflected a premium of 2,090 reais/cubic meter over Petrobras' posted price, and considered an offer price level reported at 2,100 reais/cubic meter over Petrobras' posted price.

Brazilian ultra low sulfur diesel replacement costs surged, reflecting higher NYMEX ULSD futures following the Middle East conflict. The move deepened backwardation in the curve. Platts assessed DAP Itaqui for US-origin product at $4.8569/gallon, a 7.75-cent/gal discount to ULSD November futures and an 8-cent/gal premium to December futures.

Platts Brazil Gasoline Daily Commentary

- Northeast reports two trades at premium rates
- Center-South offers emerge at inland hubs

Brazilian domestic gasoline prices remained stable Oct. 13, with few trades reported.

In the Northeast, two trades were reported. One involved 1,000 cubic meters at Acelen flat, equivalent to a premium of 900 reais to Petrobras' ETM Ipojuca. The second, for 328 cubic meters, was reported at a premium of 495 reais to the same reference.

Platts, part of S&P Global Energy, assessed gasoline FCA Suape at 3,847.60 reais/cubic meter and FCA Itaqui at 3,830.30 reais/cubic meter, both at a premium of 900 reais to Petrobras' ETM Ipojuca and ETM São Luís references.

In the Center-South, offers were reported at inland hubs, while port activity remained illiquid. In Senador Canedo, Goiás, an offer was reported at a 300-reais premium to Petrobras' EXA Senador Canedo. Offers in Ribeirão Preto and Araucária were reported at premiums of 550 reais and 670 reais to Petrobras' EXA Ribeirão Preto and EXA Araucária postings, respectively.

Platts assessed gasoline FCA Santos at 3,760.80 reais/cubic meter and FCA Paranaguá at 3,720.90 reais/cubic meter, both at a 700-reais premium to Petrobras' EXA Paulínia and EXA Araucária postings.

NYMEX November RBOB contracts settled at $3.2501/gallon, down 4.16 cents from Oct. 12. The US dollar-to-real exchange rate rose to 5.0213 reais/$1.

— Beatriz Correr

News

US distillate stocks edge lower despite strong refinery margins

- Distillate stocks drop to 104.8 million barrels
- Refinery utilization climbs to 94.2% capacity

US distillate fuel oil stocks likely fell to multiweek lows during the week to Oct. 9 as global demand drives exports, analysts surveyed by Platts, part of S&P Global Energy, said Oct. 12.

Nationwide distillate stocks likely declined 33,000 barrels to about 104.8 million barrels during the period, the analysts said. The fifth straight weekly draw would put stockpiles 9.8% behind the seasonal five-year average of US Energy Information Administration data and leave them at the lowest outright level since Aug. 28, Platts data showed.

US distillate imports dropped to 118,000 b/d the prior week, while exports increased by 260,000 b/d to 1.79 million b/d, according to S&P Global Energy CERA data.

Month to date, diesel and gasoil exports have averaged 1.9 million barrels/day in October, data from S&P Global Commodities at Sea showed, up from 1.4 million b/d in September.

US gasoline stocks likely fell 680,000 barrels to 204.1 million barrels, the analysts said, narrowing the deficit to the seasonal five-year average to 5.6%. Nationwide refinery utilization likely climbed, the analysts said, up 0.15 percentage point to 92.9% of capacity.

US refinery margins remain strong. The USGC WTI MEH cracking margin averaged $54.61/b during the week to Oct. 9, up from $50.13/b for the full month of September, CERA data showed.

ULSD cracks are also strong, surpassing record highs of September. The USGC ULSD crack versus WTI MEH climbed to $104.45/b last week from a September average of $101.03/b.

Gasoline cracks, according to CERA data, fell to $56.46/b while jet fuel crack climbed to $96.81/b during the week to Oct. 9 from a September average of $53.97/b and $86.77/b, respectively, in September, the CERA data showed.

US crude stocks likely fell 2.54 million barrels to 421.6 million barrels, the analysts said, putting stocks roughly on par with the EIA's five-year average.

OIL FUTURES: US diesel cracks surge as market discounts Russia supply impact

- NYMEX diesel crack spreads climb over 8%
- Russian imports unlikely to impact US prices: analysts
- Vessel traffic drops amid Hormuz attacks

US diesel cracks moved sharply higher Oct. 13 as analysts discounted the market impact of a US plan to import more Russian diesel fuel.

NYMEX November ULSD climbed 21.12 cents/gallon to settle at $4.9344/gal Oct. 13, pushing the front crack versus NYMEX WTI up over 8% to $113.10/barrel at market settle.

"Strength across crude oil, and products such as diesel in particular, are becoming extremely hard to shake with headlines and deal talks," TD Securities analyst Ryan McKay and Bart Melek said in an Oct. 13 note. "The diesel market is holding strength despite touted Russian supply deals as the volumes are still well below normal and the market remains skeptical about the ability of Russia to deliver."

US authorization to import Russian diesel is unlikely to have a material impact on diesel prices in the near term because Russia has little capacity to boost exports, and the US license could also face legal hurdles, energy analysts say.

"The amount of diesel Russia can provide would be a drop in the bucket compared to global demand," said Masha Kotkin, a fellow at the Center for Strategic and International Studies. "If you are asking about US diesel prices, I don't think it's going to make a difference. It is not very much in the scheme of things."

Further clouding supply outlooks, President Volodymyr Zelenskyy said Ukraine has received no commitment from Russia to stop striking its energy infrastructure, contrary to a statement by US President Donald Trump declaring the two countries had reached an energy truce, according to his address at the Warsaw Security Forum Oct. 12, quoted by Interfax-Ukraine.

"There's considerable skepticism over the Russia-Ukraine energy ceasefire, particularly with reports that Russia has hit Ukrainian energy targets since Trump announced it. While diesel initially saw some weakness following the US-Russia deal, strength has returned," ING's Warren Patterson said.

NYMEX November RBOB settled 4.16 cents/gal lower at $3.2501/gal.

Crude prices lacked direction as traders weighed improved Middle East supply outlooks and the potential for near-term escalation in the region.

NYMEX November WTI settled 40 cents/b higher at $94.14/b, and ICE December Brent declined 96 cents/b to $105.69/b.

OPEC+ crude output rose by 900,000 barrels/day month over month to 39.07 million b/d in September, according to secondary sources used by OPEC to assess output levels, and the producer group cut its outlook for global demand growth to 200,000 b/d in from 400,000 b/d the month prior.

Concerns over supply chain disruptions through the Persian Gulf persisted, with vessel movements through the Strait of Hormuz under pressure amid a series of security incidents.

Vessel traffic through the Strait of Hormuz climbed to 22 on Oct. 12, S&P Global Commodities at Sea data showed, up from a two-week low of 18 on Oct. 11, despite at least four ship attacks near or within the chokepoint since Oct. 10.

Besides the confirmed ship attacks, the US Central Command said Oct. 11 that US forces disabled the Panama-flagged bulk carrier Akira Sun after it attempted to run the US naval blockade, having previously departed an Iranian port.

"This is raising concerns in the shipping industry that risks taken to transit the strait are becoming too high. This has seen a growing number of supertankers turning away from the Persian Gulf," ANZ's Daniel Hynes said in a note Oct. 13.

— Christopher Vanmoessner

Platts proposes to adopt Brazil Central Bank Ptax FX rate as dollar, euro to real conversions from Jan. 4, 2027

Platts, part of S&P Global Energy, proposes to assess some of its assessments utilizing Ptax foreign exchange rate references published by the Brazilian Central Bank (Bacen). This applies to several assessments containing dollar and euro to reais conversions, effective Jan. 4, 2027.

The proposal would align more closely with Brazilian market conventions. Platts understands that Ptax is widely used in financial and commercial transactions.

Under the proposal, Platts would assess the daily FX rates under the following existing Platts symbols, taking into account Ptax bid and ask closing quotes. Ptax opening and intermediate quotes would not be considered.

Symbol	Conversion
BRLUB00	EUR/BRL
USDRE00	USD/BRL
AUFUT00	
USDBR00	
USDBL00	

Additional Platts assessments that derive BRL, EUR or USD conversions from these FX symbols would also be affected by the proposed change. The full list is available here.

The publication of these FX rates would follow Platts Brazil publishing schedule. On Brazil non-publishing days, Platts would use the latest published values under these symbols for the conversions that follow other publishing schedules, in line with prevailing market practice.

Please send feedback, questions, or comments on the proposal by Nov. 25, 2026, to **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches SAF US Gulf Coast and Brazil import parity assessments Oct. 1

Platts, part of S&P Global Energy, has launched daily US Gulf Coast sustainable aviation fuel (SAF) assessments and daily Brazil SAF import parity price (IPP) assessments, effective Oct. 1, 2026.

Platts has observed increasing SAF supply and trade activity in the US Gulf Coast, as well as evolving regulatory frameworks and decarbonization initiatives supporting SAF adoption across Latin America. The new assessments provide additional transparency into these developing markets.

The assessments reflect SAF meeting ASTM D7566 specifications for Synthesized Paraffinic Kerosene produced from Hydroprocessed Esters and Fatty Acids (HEFA-SPK), as defined in its Annex A2. They reflect material with a density of 760 kilograms/cubic meter at 15 degrees Celsius. Feedstocks reflected include vegetable oils, waste oils, fats, tallow, and similar materials. SAF produced using palm oil feedstocks will not be reflected.

US Gulf Coast SAF

The USGC waterborne assessments reflect neat HEFA-SPK sustainable aviation fuel on an FOB basis, loading from Beaumont/Port Arthur, Lake Charles, or the greater Houston area, which includes Texas City, Deer Park, Pasadena, and Houston. Cargoes loading from Corpus Christi, New Orleans, Baton Rouge, and Pascagoula may also be considered and normalized to the primary assessed locations where appropriate.

The assessments are published as an outright assessment and as a premium to the Platts Jet Kero 54 USGC Waterborne assessment (PJABM00). The assessments exclude the Clean Fuel Production Credit and D4 biomass-based diesel Renewable Identification Number values.

The assessments reflect the following specifications:

Assessment	Biofuel Symbol	Oil symbol	Incoterm	Timing	Volume	Unit of Measure
SAF (H-S) FOB US Gulf Coast (credits detached)	SAFPC00	SAFMC00	FOB	Five to 25 days forward	Minimum volume of 1,000 barrels	US cents/gal
SAF (H-S) FOB US Gulf Coast premium (credits detached)	SAFPD00	SAFMD00	FOB	Five to 25 days forward	Minimum volume of 1,000 barrels	US cents/gal

The assessments consider bids, offers, and trades reported during the day and reflect a 13:30 Houston time market close and follow the US publishing schedule. In the absence of sufficient spot market information, Platts may consider values derived from related markets, including netbacks from the existing Platts SAF CA assessment (SAFCA00) using prevailing freight rates and other relevant market differentials, in line with Platts methodology.

Brazil SAF import parity price (IPP)

The Brazil IPP assessments reflect the price of neat HEFA-SPK SAF delivered into Santos, Brazil, published as an outright assessment and as a premium to the Platts Jet A-1 IPP Santos assessment (BJADD00). The IPP is calculated using the average of the latest three published Platts SAF FOB US Gulf Coast assessments (SAFPC00), including the assessment published on the day of calculation, and adjusted to a delivered basis using prevailing freight rates, including the Platts Clean USGC-Brazil 38,000 mt Medium Range tanker assessment (TCAFR00).

During the first two publication days following the launch, when fewer than three historical SAF FOB US Gulf Coast assessments are available, Platts will derive the three-day

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

average SAF FOB US Gulf Coast value using netback calculations from California.

Additional adjustments include demurrage, insurance, transit losses, storage costs, and any value adjustments necessary to account for specification differences. Applicable import costs, duties, and tariffs may also be considered where relevant.

The assessment specifications are as follows:

Assessment	Biofuel symbol (US cents/gal)	Biofuel symbol ($/barrel)	Biofuel symbol (BRL/CBM)	Timing	Volume
SAF (H-S) IPP Santos	SAFPA00	SAFPE00	SAFPG00	Five to 25 days forward	Minimum volume of 1,000 barrels
SAF (H-S) IPP Santos premium	SAFPB00	SAFPF00	SAFPH00	Five to 25 days forward	Minimum volume of 1,000 barrels

The assessments are also available under the following corresponding mirror symbols:

Assessment	Oil Symbol (US cents/gal)	Oil Symbol ($/barrel)	Oil Symbol (BRL/CBM)
SAF (H-S) IPP Santos	SAFMA00	SAFME00	SAFMG00
SAF (H-S) IPP Santos Premium	SAFMB00	SAFMF00	SAFMH00

The IPP assessments reflect a 13:30 Houston time market close and follow the US publishing schedule.

Platts proposed the above assessments Aug. 14 in a subscriber note available here, with the decision published Sept. 17.

Please submit any feedback, comments, or questions to **platts_biofuels@spglobal.com** and **pricegroup@spglobal.com**.

For written comments, please provide a clear indication if comments are not intended for publication by Platts. Platts will consider all comments received and will make comments not marked as confidential available upon request.
