Market Commentary

Platts Asia and Middle East Bunker Daily Commentary

- Singapore-delivered Hi-5 spread narrows to $27/mt
- Fujairah fuel oil inventories drop 30% WOW

Spot trading activity slowed around the bunker hubs of Singapore and Fujairah on Oct. 14 amid an ongoing key industry event.

The Platts benchmark FOB Singapore Marine Fuel 0.5% sulfur cargo retreated $7.94/metric ton day over day to $845.23/mt at the Asian close on Oct. 14. The Platts benchmark 380 CST HSFO cargo assessment

rose $19.72/mt to $799.13/mt on Oct. 14.

During the Platts bunker Market on Close process, the December ICE Brent futures contract rose 17 cents/b, or around $1.25/mt, from $105.65/b at the Asian close on Oct. 14.

Offers for the Singapore-delivered 0.5%S marine fuel were heard mainly at $908-$920/mt for products deliverable as early as Oct. 19, but mostly from Oct. 23-24 onward. Products deliverable later in October, from Oct. 27-28 onward and in November, were heard offered at $892-$905/mt.

Platts eventually assessed the Singapore-delivered 0.5%S marine fuel at $909/mt on Oct. 14, keeping the Singapore-delivered marine fuel 0.5%S bunker premium over benchmark Singapore marine fuel 0.5%S cargo assessments steady at $63.77/mt.

The Singapore-delivered 380 CST HSFO bunker fuel was heard offered in a wide range of $880-$894/mt for products mostly deliverable from Oct. 23-24 onward.

Platts assessed the Singapore-delivered 380 CST HSFO bunker fuel at $882/mt on Oct. 14, up $32/mt day over day. The Singapore-delivered 380 CST bunker premium over the benchmark Singapore 380 CST cargo rose 17.4% to $82.87/mt, reaching its highest level since March 13, according to Platts data.

The spread between the Singapore-delivered 0.5%S marine fuel and 380 CST HSFO bunker fuel narrowed 59.7% day over day and 70.7% week over week to a record low of $27/mt on Oct. 14.

The spread between Singapore 0.5%S marine fuel oil and benchmark high sulfur fuel oil cargo, also known as the Hi-5 spread, narrowed to $46.10/mt on Oct. 14, compared with $73.76/mt in the preceding session.

This comes as the Asia HSFO market strengthened, with rising freight rates further hampering arbitrage opportunities amid existing disruptions in cargo inflows to Singapore.

Meanwhile, China's latest round of export quotas for LSFO likely exerted downward pressure on delivered bunker prices in Asia.

"Overall, it's a higher quota than last year. Probably when year ends, when China becomes tight again, we might see some changes," a trader said.

In the Middle East, the Fujairah-delivered marine fuel 0.5%S bunker premium over the benchmark Singapore marine fuel 0.5%S cargo dropped $10.06/mt day over day to $129.77/mt, while the Fujairah-delivered 380 CST HSFO bunker premium over the 380 CST 3.5%S FOB Arab Gulf fuel oil cargo also fell $7.72/mt to $129.24/mt on Oct. 14.

Oil product inventories at Fujairah in the UAE fell 9.9% in the week ended Oct. 12, led by a 30% decline in heavy distillates used as ship fuel and for power generation, according to Fujairah Oil Industry Zone data published Oct. 14.

Heavy distillates fell to 3.291 million barrels, the lowest level in four weeks, the data showed.

Platts North Asia Bunker Daily Commentary

- Busan/Ulsan barging congestion and tight LSFO supply elevate premiums
- Hong Kong to expect slight HSFO ease around third week of Oct

North Asia bunkering hubs continue to face tight supplies of fuel oil as premiums for the complex remain elevated for the Oct. 14 session.

The Platts benchmark FOB Singapore 380CST high sulfur fuel oil cargoes rose $19.72/metric ton day over day to $799.13/mt on Oct. 14, while the front-month December ICE Brent futures gained 57 cents/b to be assessed at $105.65/b at the Platts MOC Asian assessment on Oct. 14.

High sulfur fuel oil out of the port of Busan remains in extremely limited quantities, market participants had noted, with availabilities only heard for November deliveries onward.

On the low sulfur fuel oil front, stocks were also

heard to have tightened over the Oct. 14 session, with market participants having offered an initial quotation at a much higher premium than the day before, despite upstream 380CST high sulfur fuel oil cargoes experiencing a $19.72/mt gain in market structure.

A market participant had said, "Ulsan terminals is experiencing barging congestion now," while also noting that some suppliers are also running very low on available stocks for October, leading to surging premiums for the day.

Offers for Busan-delivered low sulfur fuel oil were heard in the range of $1,015-$1,100/mt, with delivery dates available for Oct. 20-23 loadings.

Platts had eventually assessed the fuel grade at $1,050/mt, up $15/mt day over day. The premium against the benchmark FOB Singapore low sulfur fuel oil cargoes was $204.77/mt, up $22.94/mt day over day.

Meanwhile, at the port of Hong Kong, the Hi-5 spread between marine fuel 0.5%S and 380CST high sulfur fuel oil continues to remain narrow, with some market participants heard offering the high sulfur product at higher premiums than its low sulfur counterpart.

Some HSFO inventory easing is expected around Oct. 21 with the arrival of some cargo, although sentiments still point toward a tighter market for the complex.

Offers for Hong Kong-delivered high sulfur fuel oil were heard in the range of $929-$975/mt, with delivery dates typically set for Oct. 22-25.

Platts eventually assessed the Hong Kong-delivered high sulfur fuel oil at $945/mt, up $25/mt day over day. Premiums against the benchmark FOB Singapore high sulfur fuel oil cargoes were assessed at $145.87/mt, up $5.28/mt day over day.

Meanwhile, offers for Hong Kong-delivered low sulfur fuel oil were heard in the range of $919-$980/mt, with delivery dates around Oct. 17-27.

Platts eventually assessed the Hong Kong-delivered low sulfur fuel oil at $946/mt, up $6/mt day over day.

The premium against the benchmark FOB Singapore low sulfur fuel oil cargoes was assessed at $100.77/mt, up $13.94/mt day over day.

Platts is part of S&P Global Energy.

Platts Hong Kong Bunker Delivered Daily Rationale & Exclusions

Bunker Dlvd Hong Kong <PUAER00>, <MFHKD00> assessment rationale:

The Hong Kong 380 CST bunker fuel assessment Oct. 14 reflected a trade at $945/metric ton in which SINOPECHKFO sold to Chimbusco Pan Nation 500-600 mt of 380 CST bunker fuel for the Oct. 19-21 delivery at Hong Kong during the Platts Market on Close assessment process.

The Hong Kong marine fuel 0.5% bunker fuel assessment Oct. 14 took into consideration offers heard during and outside the Platts Market on Close assessment process, and the day-over-day change in the Asian 0.5% low sulfur fuel oil market.

Exclusions:

No market data was excluded from the Oct. 14 Hong Kong delivered bunker fuel assessment process.

Platts European Bunker Daily Commentary

- Rotterdam bunker demand remains low
- Suppliers report good availability

The Northwest European bunker market continued to see low demand on Oct. 14, as buyers cautiously awaited a clear price direction.

In the futures market, the ICE Brent and LSGO front-month contracts saw little change from its previous close as geopolitical tensions continued to weigh on sentiment.

In Rotterdam, suppliers described demand as poor, with limited spot activity seen on the day.

Buyers continued to await a clear price direction, with some able to withhold lifting stems amid flat price volatility.

Market participants reported good availability across all grades in Rotterdam, noting that earlier blending and logistical issues had been resolved.

"Slow day, not much demand," one supplier said.

Following Rotterdam, operational conditions in Amsterdam and Antwerp were largely stable, also improving from previous weeks, with suppliers reporting no significant product or quality issues.

"All players in the sandbox," a trader said. "As far as I can tell, nobody has any operational or quality issues."

Gothenburg was also broadly well supplied, despite reports that one supplier had a relatively full delivery schedule.

A second trader said weather was becoming a greater consideration as the region moved into the winter period.

Platts Mediterranean and African Bunker Daily Commentary

- Gibraltar inquiry remains limited Oct 14
- Piraeus port faces delivery date delays
- Weather threatens Malta bunker operations

European bunker markets were mixed Oct. 14, with demand remaining subdued across Northwest

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Europe while Mediterranean hubs saw stronger activity heading into the second half of the month.

In Gibraltar, demand was largely unchanged from previous sessions, with suppliers reporting limited inquiry levels.

Availability of HSFO remained mixed, with some suppliers reporting tight inventories, while similar mixed feedback was reported for VLSFO in Las Palmas.

Mediterranean markets showed firmer demand.

Sources in Piraeus described the port as busy, although deteriorating weather conditions could delay some bunker operations. Earliest delivery dates were moving further out, reflecting stronger scheduling pressure than seen in Northwest Europe.

Malta also faced weather-related concerns, with forecasts pointing to potential disruptions to bunker operations despite normal underlying market conditions.

Platts Americas Bunker Fuel Daily Commentary

- Gulf Coast bunker trading stays subdued
- East Coast pricing follows bulk oil trends
- West Coast bunker markets gain strength

Trading of retail bunker fuels along the US Gulf Coast remained subdued Oct. 14 as some market participants were away at an industry event while others waited out market volatility.

"Spot vessel fixtures are in wait-and-see mode," one Gulf Coast trader said.

Platts assessed ex-wharf 0.5%S VLSFO bunkers in Houston and New Orleans up $7 at $759/metric ton and $869/mt, respectively.

Marine gasoil dipped $2 in Houston and New Orleans, and Platts assessed ex-wharf pricing at $1,415/mt and $1,478/mt, respectively.

High sulfur fuel oil on the Gulf Coast rose $5 and Houston ex-wharf ended the day at $577/mt while New Orleans was assessed at $782/mt.

On the East Coast, spot pricing took cues from the bulk fuel oil barge segments and diesel futures.

Platts assessed 3.5%S HSFO bunkers in New York up $8 at $631/mt ex-wharf.

On 0.5%S VLSFO bunkers, Platts assessed New York up $10 at $807/mt ex-wharf.

The Atlantic Coast MGO market weakened across all markets. Ex-wharf New York Harbor MGO dipped $2 and was assessed at $1,564/mt.

The West Coast spot bunkers market strengthened across the board, following competing markets in Asia and oil futures.

Platts assessed 3.5%S HSFO bunkers ex-wharf Los Angeles up $17 at $888/mt. VLSFO on a delivered basis in Los Angeles rose $5 to $1,015/mt.

In the Pacific Northwest, VLSFO Vancouver rose $8 to end at $983/mt and MGO ex-wharf at the same port gained $11 to end the day at $1,590/mt, based on market indications.

Platts is part of S&P Global Energy.

Platts Latin American Bunker Daily Commentary

- Spot VLSFO rises $15/mt in Cartagena
- Bunker pricing rises in Ecuador and Chile
- Other Latin ports see mixed price movements

Latin America spot bunker prices were mixed Oct. 14, moving with futures and rising with lagged adjustments.

Platts assessed front-month Brent at $106.08/barrel, up 50 cents/b from the previous session. NYMEX ULSD front-month futures contract slid 0.70 cent/gallon to be assessed at $4.9274/gal, pushing down the Latin American MGO markets.

Spot marine fuel 0.5%S markets followed the Brent trend, with Cartagena, Colombia, showing the largest rise, up $15/metric ton to $852/mt, tracking sources' indications.

In most Latin American ports, marine fuel 0.5%S gained $1 to $6/mt, day on day.

Platts, part of S&P Global Energy, assessed delivered marine gasoil in Guayaquil, Ecuador, up $33/mt, to $1,846/mt delivered, marking the region's biggest day-on-day rise as suppliers updated their offerings.

In Valparaiso, Chile, Platts assessed MGO $8/mt up at $1,903/mt supported by Ecuador's hike, and suppliers' indications.

Delivered MGO fell $1 to $6/mt in the rest of the key Latin American ports.

Subscriber Notes

Platts proposes to launch FuelEU Compliance Surplus (FCS) price assessments Jan. 4, 2027

Platts, part of S&P Global Energy, proposes to launch weekly FuelEU Compliance Surplus (FCS) price assessments and associated monthly averages, effective Jan. 4, 2027.

Under the FuelEU Maritime Regulation, ships can utilize flexibility mechanisms, including banking, borrowing, and pooling, to manage their compliance balances. Compliance is measured by a vessel's average Well-to-Wake greenhouse gas (GHG) intensity of energy used on board during a given compliance year.

FuelEU compliance surplus is generated when the GHG intensity of energy used onboard a vessel is below the required FuelEU limit, resulting in a positive compliance balance. The proposed assessments would reflect the spot value of FuelEU compliance surplus available for allocation through FuelEU pooling, expressed in €/mtCO2e.

Platts proposes to assess FCS in standardized lot sizes of 500-1,000 mtCO2e. Platts would consider all available market information, including firm bids and offers, transactions and indications of value, as well as any other information deemed relevant to the assessment process. Bids, offers and transactions for other lot sizes may be considered and normalized to the proposed standard.

The assessment would be published weekly in €/mtCO2e. Platts would also publish monthly averages calculated from the weekly FCS assessments published during the relevant calendar month.

The assessments would be published on the following fixed pages for weekly assessments (PGB2050, PGA2051, PRF2050) and the following for monthly averages (PGB2052, PGA2053, PRF2052).

They would also be published in the Bunkerwire and Bunkerwire Monthly reports, along with the Biofuelscan reports.

Additionally, Platts would publish all FuelEU CO2 abatement assessments in the following fixed pages for weekly assessments (CMA2500, ETA2500) and the following for monthly averages (CMA2501, ETA2501), along with the Carbon Markets Daily report as mirror symbols.

Platts is also seeking feedback on the publication of forex converted FCS assessments in $/mtCO2e, alongside the €/mtCO2e assessments published.

Platts invites feedback, comments and questions on this proposal by Nov. 20, 2026, to shipping@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts proposes to launch Rotterdam bio-LNG FuelEU CO2 abatement assessments from Jan. 4, 2027

Platts, part of S&P Global Energy, proposes to launch daily FuelEU CO2 abatement assessments reflecting greenhouse gas abatement costs for the maritime sector by using bio-LNG, effective Jan. 4, 2027.

The proposed assessments would quantify the cost of emissions abatement generated through the combustion of unsubsidized bio-LNG and subsidized bio-LNG bunker fuel in Rotterdam against both very-low sulfur fuel oil and marine gasoil.

The assessments would supplement Platts' existing suite of FuelEU CO2 abatement assessments, found here.

These abatement assessments would be expressed in terms of $/mtCO2e, allowing for standardized comparisons across different fuel types. The emissions factors for Well-to-Wake emissions for fossil bunker fuels are calculated in accordance with Regulation (EU) 2023/1805 of the European Parliament.

For bio-LNG, the Well-to-Wake emissions are calculated at a carbon intensity of –30g CO2/MJ, aligning with the CI specifications for Platts' bunker assessments for unsubsidized and subsidized bio-LNG: **https://www.spglobal.com/energy/en/pricing-benchmarks/our-methodology/subscriber-notes/070126-platts-updates-carbon-intensity-value-for-subsidized-unsubsidized-rotterdam-bio-lng.**

Platts proposes to launch abatement assessments reflecting 100% and 50% of EU ETS costs, as well as EU ETS exclusive assessments, for both subsidized and unsubsidized bio-LNG.

The assessments that include EU ETS costs would use the Tank-to-Wake emissions factors of the fuels, multiplied by the daily EUA price assessments published by Platts (EADLP00), to calculate EU ETS costs.

All bio-LNG CO2 abatement assessments would reflect a 1630 London time market close and follow the Platts UK publishing schedule.

The assessments would be published on the following fixed pages for daily assessments: PGB2050, PGA2051, PRF2050, LNG0865, LNG0860, PGN0860, and the following for monthly averages: PGB2052, PGA2053, PRF2052, LNG0866.

They would also be published in the Bunkerwire and Bunkerwire Monthly reports, along with the Biofuelscan report and LNG Daily report.

Additionally, Platts would publish all bio-LNG abatement assessments in the following fixed pages for daily assessments: CMA2500, ETA2500, and the following for monthly averages: CMA2501, ETA2501, along with the Carbon Markets Daily report as mirror symbols.

Please send all feedback, comments and questions to shipping@spglobal.com and pricegroup@spglobal.com, by Nov. 20, 2026.

For written comments, please indicate if they are not intended for publication by Platts for public viewing. We will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches B100 Advanced FAME delivered Rotterdam biobunker assessment Oct. 1

Platts, part of S&P Global Energy, has launched a daily B100 Advanced fatty acid methyl ester (FAME) delivered Rotterdam biobunker assessment, effective Oct. 1, 2026.

Platts understands that the demand for marine fuels offering higher greenhouse gas emissions savings has increased in response to FuelEU Maritime and the inclusion of shipping in the EU Emissions Trading System.

The new assessment reflects neat Advanced FAME produced from feedstocks listed in Annex IX Part A of the Renewable Energy Directive and meeting EN 14214 specifications. Biofuels eligible for inclusion are required to hold proof of sustainability issued under voluntary schemes approved by the European Commission, qualify as Advanced under Dutch regulations, and achieve a minimum greenhouse gas emissions savings of 80% relative to the fossil fuel comparator specified under the Renewable Energy Directive.

In line with market feedback, the new assessment considers biobunker stems with volumes ranging from 200 to 600 metric tons. Market participants indicated that typical B100 Advanced FAME stem sizes in Rotterdam fall within this range. Platts announced the range in a decision published Sept. 3, following the 200-1,000 mt range initially proposed in an Aug. 3 subscriber note.

Additionally, the new assessment reflects biobunker stems for delivery 5 to 10 days forward on a delivered Rotterdam basis. The assessment is inclusive of barging and associated costs for delivery into the receiving ship and expressed in US dollars/mt.

The assessment specifications are as follows:

Assessment	Pricing basis	Symbol	Delivery basis	Delivery period	Volume
B100 Biobunkers Advanced FAME Rotterdam	Outright	ABKRG00	Delivered	5–10 days forward	200-600 mt

Platts may consider other delivery periods, volumes, delivery methods, and relevant nearby locations and normalize them to the above specifications.

The published assessment reflects discounts applied by suppliers in connection with Emission Reduction Units.

The assessment considers information reported to Platts and published as heards throughout the day, including firm bids and offers, trades, and indicative price information, as well as any other data deemed relevant to the assessment process.

The daily assessment reflects a 16:30 London time market close and follows the Platts UK publishing schedule.

The assessment is published in Platts Biofuels Alert, the Bunkerwire Report, Bunkerwire Monthly, Biofuelscan Report, and Biomass-Based Diesel Report, as well as on Energy Core and on fixed pages PBF0008 and PBF0009.

Please send any questions, comments, or feedback to platts_biofuels@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches FOB Rotterdam 0.1%S ultra low sulfur fuel oil barge assessment Dec 1, 2025

Platts, part of S&P Global Energy, has launched a daily assessment for FOB Rotterdam 0.1%S ultra-low sulfur fuel oil (ULSFO) barges Dec. 1, 2025.

This follows an increase in demand for the fuel in Europe following the implementation of the Mediterranean Emissions Control Area from May 1, 2025.

Specifications: The assessment reflects RMG 380 specifications as per ISO 8217: 2017 Petroleum products — Fuels (class F) on all parameters, with the addition of a minimum viscosity of 30 CST, in line with market feedback.

Size: The assessment reflects a barge size of 1,000 mt, with an operational tolerance of plus/minus 5%. Platts also publishes indications between 1,000 mt and 5,000 mt inclusive. Indications higher than 1,000 mt may be subject to normalization.

Port basis & assessment period: The assessment reflects the value of barges loading FOB basis Rotterdam-Antwerp, for loading 3-15 (Monday to Tuesday) or 5-15 (Wednesday through Friday) days forward, with value normalized to reflect the mean value of these loading ranges. Platts understands that barges typically trade for the front five days, middle five days or the back five days.

Product Origin: In line with all European fuel oil assessments, the FOB Rotterdam ULSFO barge assessments reflects non-Russian origin.

Assessment: The assessment is assessed as a flat price, in line with Platts' existing 3.5% and 0.5% Rdam barge assessments.

Nomination: A seller can nominate any reasonable terminal in the Amsterdam-Rotterdam-Antwerp region for a FOB Rotterdam-Antwerp barge trade reported in the Market on Close assessment process, and the buyer should not unreasonably refuse this option. The seller should compensate the buyer for the demonstrable incremental freight cost associated with loading in an alternative port to Rotterdam-Antwerp. For FOB North West Europe barges across all products, the buyer must give the seller 48 clear working hours' notice of the date of loading required. The nomination procedure expectations are in line with Platts' 0.5% Rdam barge assessment expectations, as stated in the Europe and Africa Refined Oil Products Methodology guide, found here: **https://www.spglobal.com/content/dam/spglobal/ci/en/documents/platts/en/our-methodology/methodology-specifications/refined-products/refined-products-europe-africa-specifications.pdf**

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Platts will launch eWindow instruments for this assessment on Dec. 15.

The FOB Rotterdam Marine Fuel 0.1% Barge assessment will be published to code FBEBR00, and on fixed pages PGA0030/PRF0030, PGA1112/PRF1112, PGA1510/PRF1510 and in European Marketscan.

Platts first proposed to launch this assessment on Oct. 10 in a subscriber note and published its decision to launch the assessment in a subscriber note on Oct. 31.

Please send any comments, feedback and questions to Europe_products@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.
