In the tender, at least 8 million barrels of Upper Zakum and 2 million barrels of Das Blend were heard sold to North Asian refiners that included those in China, Taiwan and Japan. Prices on a delivered basis were heard at premiums in the low- to mid-teens to Platts Dubai, three Asia-based sources said.

Another 5 million barrels of Upper Zakum and 3 million barrels of Das Blend were heard sold to four separate Indian refiners, with prices on a delivered basis heard at premiums in the high singles to Platts Dubai, according to three Asia-based sources.

Some of the aforementioned cargoes were also heard to have transacted on an STS basis — likely across the Fujairah-Sohar range — at discounts of around $4-$5/b to Platts Dubai for Upper Zakum, and around parity to Platts Dubai for Das Blend.

Some cargoes could also have been sold on an ICE Brent crude futures basis, though further details were unclear, the same sources said.

Sentiment across the broader Middle East crude complex continued to weaken in the Oct. 14 session, with the Platts Dubai cash-futures spread weakening for a fourth day to a fresh two-month low premium of $7.35/b.

Trade sources held mixed views on supply-demand balances within Asia. While high freight rates have impeded the flow of arbitrage crudes from the West and Iranian crude supply has tightened, ongoing spot offers from various Middle East producers, as well as the continued successful transit of tankers through the Strait of Hormuz, have helped to prevent any severe shortage within the region.

Sources also pointed to ample sales of Basrah crude to Chinese refiners in recent weeks as helping partially offset the loss of Iranian crude supply, particularly among the country's independent refiners.

"They can buy Basrah. It's cheap. Too much cargoes are not cleared," an independent refinery source said, adding that offers for December ESPO Blend cargoes have potentially fallen below a $20/b premium to ICE Brent on a DES Shandong basis.

Platts earlier reported imports of Iranian crude by China's independent refineries hitting a four-year low in September, with volumes likely to trend lower in October due to the ongoing US blockade of the Strait of Hormuz.

Basrah Medium and Heavy crude parcels, meanwhile, were heard to have been sold in recent weeks to around eight independent refiners, at premiums of about $17-$18/b to ICE Brent futures on a delivered Shandong basis for Basrah Medium, and a premium of around $12/b to ICE Brent on the same basis for Basrah Heavy.

Platts Mideast Sour Crude Daily Rationales & Exclusions

Dubai Mo01 <PCAAT00> assessment rationale: The December cash Dubai assessment Oct. 14 took into consideration bids for cash Dubai partials at 109.09/b

Platts Asia Pacific Sweet Crude Daily Market Analysis

- Dec-loading Ichthys Field condensate offered
- Taiwan's CPC seeks sweet crude for Jan arrival

The Asia-Pacific regional complex saw an increase in market activity led by tender issuances across the crude and condensate complex Oct. 14.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

In the regional condensate complex, France's TotalEnergies was heard to have offered its Australian Ichthys Field condensate cargo scheduled to load over Dec. 11-15 via a tender that closed Oct. 14, according to several trade sources.

The Platts-assessed second-month gasoline and naphtha swap cracks against Dubai crude swaps averaged $19.11/barrel and minus $6.05/b, respectively, as of the Oct. 14 Asian close, compared to averages of $23.04/b and minus $1.97/b in September.

In the delivered crude complex, Taiwan's CPC was seen seeking various sweet crude grades for January arrival via its monthly import tender that closes Oct. 15, with next-day validity.

In the previous trading cycle, the refiner was last heard to have purchased four Aframax cargoes of US WTI Midland crude scheduled for December arrival from Gunvor at premiums of about $27/b against Platts Dated Brent crude assessments, CFR Taiwan.

CPC was also heard to have purchased two Aframax cargoes of Argentina's Medanito crude scheduled for December arrival, each from PetroChina and TotalEnergies, at premiums in the $22s/b against the same benchmark.

Meanwhile, the International Energy Agency cut its forecasts for global oil demand this year and slashed its estimate for next year's demand recovery, Oct. 14, warning that diesel supplies will remain tight well into next year as the Middle East war continues to hit supplies and fuels pump prices.

World oil demand is now set to decline by an average of 2.6 million barrels/day in 2026 as the impact of the war in the Middle East weighs on markets and demand growth is not expected to return to positive territory until March 2027, the IEA said in its latest monthly Oil Market Report. The agency kept its average 2026 world oil demand at 102.4 million b/d but cut 2027 demand to 104.4 million b/d from 105 million b/d in its September report, leaving 2027 consumption about 620,000 b/d, or 0.6%, below 2025 levels.

The IEA forecast global demand falling by 2.5 million b/d year over year in the fourth quarter of 2026, following contractions of 5 million b/d in the second quarter and 3.7 million b/d in the third quarter. In September, the IEA had forecast a 2.5 million b/d decline in global oil demand in 2026 and a 2.6 million b/d rebound in 2027.

North Sea crude oil traders have indicated that differentials may have approached a near-term peak as the elevated cost environment pressures downstream margins.

The EMEA Platts Market on Close assessment process saw cargo offers across the North Sea and Mediterranean markets Oct. 14.

In the North Sea market, TotalEnergies offered an Ekofisk cargo loading over Nov. 6-8 at a premium of $20.30/b over Dated Brent, while Glencore offered a WTI Midland cargo arriving in Rotterdam over Nov. 14-18 at a premium of $22.25/b over Dated Brent.

Both indications reflected weaker values on the day but failed to attract buyers by the London close.

The retreat in crude values comes amid a squeeze on downstream margins following a recent rally in both feedstock and freight prices.

"I feel the current pricing set is starting to impact demand and margins," said one North Sea crude oil trader.

The Platts Forties Northwest Europe Cracking Netback Margin stood at $18.62/b Oct. 13, down 66% from its Sept. 1 peak. Nevertheless, the figure remains above the $12.87/b average seen in October 2025, Platts data showed.

The elevated cost environment has increased buyer hesitancy in the market amid limited clarity on price direction, as in previous cycles. A second North Sea crude trader also suggested that buyers may be waiting for a rebound in downstream product prices.

Refined product inventories remained low in the lead-up to stockpiling season amid weak storage economics, given the underlying backwardation in oil markets.

"[However] reality is coming to check in fast," the second trader said.

Despite the latest sell-side pressure, values of light-sweet crude grades remained elevated relative to their sour counterparts in the North Sea.

First-decade November loading Johan Sverdrup cargoes were again heard trading around a premium of $6/b over Dated Brent during the Oct. 14 session.

On a delivered basis to Rotterdam, two traders have estimated the spread between WTI Midland and Johan Sverdrup to be at least $10/b.

"I reckon [a sweet-sour switch] is going to happen with such wide spreads on prices," another North Sea crude trader said.

Traders have acknowledged the potential for such a switch to occur, noting the cargo movements in the first half of the week.

"Sweet is too pricey versus sours right now," the second trader said.

In upstream news, Equinor and its partners have made an oil and natural gas discovery in the Grimsnes prospect near the Osberg field in the North Sea, the Norwegian energy company said Oct. 14.

Preliminary figures put estimated volumes between 19 million and 50 million barrels of recoverable oil equivalent, Equinor said.

Platts is part of S&P Global Energy.

Platts North Sea Dated Brent, BFOE, CFD Assessment Rationales & Exclusions

Dated Brent <PCAAS00> assessment rationale:

Of the six crudes in the Dated Brent basket, Ekofisk and WTI Midland were seen in the Market on Close assessment process.

Platts assessed Brent Blend unchanged Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting steady market fundamentals, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed Forties unchanged Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting steady market fundamentals, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed Oseberg 50 cents/barrel lower Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting weakness demonstrated by Ekofisk, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed Ekofisk lower in a 4-cent/day backwardated structure Oct. 24 to Nov. 7, using an outstanding offer Nov. 7.

Nov. 7-14 was assessed in a flat structure.

Platts assessed Troll 50 cents/b lower Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting weakness demonstrated by Ekofisk, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed FOB WTI Midland lower, reflecting a lower CIF Rotterdam assessment and a higher freight adjustment factor.

Platts assessed CIF WTI Midland lower in a 2-cent/day backwardated structure Oct. 26 to Nov. 14, using an outstanding offer Nov. 15-17.

WTI Midland was the most competitive grade Oct. 24 to Nov. 4. Ekofisk was the most competitive Nov. 5-9. WTI Midland was the most competitive grade Nov. 10-14.

BFOE (PCAAQ00-PCAAR00,PCARR00) assessment rationale:

Platts assessed Dec Cash BFOE using a traded bid in the MOC.

Platts assessed Jan Cash BFOE using December/January EFP roll heard during the day.

Platts assessed Feb Cash BFOE using January/February EFP roll heard during the day.

CFD (PCAKA00-AALDA00) assessment rationale:

Platts assessed Oct. 19-23 using a traded offer.

Platts assessed Oct. 26-30 using an outstanding offer.

Platts assessed Nov. 2-6 using an outstanding bid.

Platts assessed Nov. 9-13 using an outstanding offer.

Platts assessed Nov. 16-20 using a narrowed Nov. 9-13 versus Nov. 16-20 CFD roll than heard during the day, as earlier parts of the curve had been proven narrower.

Johan Sverdrup FOB North Sea (AJSVA00, AJSVB00) assessment rationale:

Platts assessed Johan Sverdrup 50 cents/b higher Oct. 24 to Nov. 13, with flat structure rolled over back-end

Platts WTI Midland Crude DAP Europe Assessment Rationale & Exclusions

WTI Crude DAP Europe <AWTIC00> assessment rationale:

WTI DAP Rotterdam was assessed lower in a 25-cent/day backwardation structure between Nov. 13 and Dec. 3 due to weaker market sentiment heard on the day and a softening in Aframax freight rates between the US Gulf Coast and Rotterdam. There were no bids, offers, or trades in the Platts Market on Close assessment process for WTI Midland DAP Rotterdam.

WTI Crude DAP Augusta <AWTIA00> assessment rationale:

WTI DAP Augusta was assessed lower in a 25-cent/day backwardation structure between Nov. 13 and Dec. 3 due to weaker market sentiment heard on the day and a softening in Aframax freight rates between the US Gulf Coast and Augusta. There were no bids, offers, or trades in the Platts Market on Close assessment process for WTI Midland DAP Augusta.

Platts Mediterranean & Black Sea Sweet Crude Daily Commentary

- CPC Blend expected to load 1.5 mil-1.6 mil b/d in Nov
- Four Med crude cargoes offered in Platts MOC

Participants in the Mediterranean crude oil market said Oct. 14 that ample supply, strong freight rates and higher prices more generally were keeping buyers reluctant to secure light sweet volumes in the region for the time being.

Spot trading activity remained largely subdued, despite the circulation of most Mediterranean crude lifting programs for the November cycle, one trader said.

Indeed, Kazakh-origin CPC Blend was expected to load between 1.5 million-1.6 million barrels/day in November, according to data seen by Platts and compiled by several crude traders with direct knowledge of such lifting schedules.

The November program was set to mostly consist of Suezmax-sized 130,000 metric ton clips, the data showed, with just two Aframax-sized parcels of 95,000 mt. One of the traders said the program was not "particularly longer or shorter" than previous months' schedules.

The sentiment of softer buying was demonstrated in the day's Platts Market on Close assessment process with three Azeri Light cargo offers and one CPC Blend cargo offer shown in the process, with all four left outstanding at the London close without a buyer.

China's Unipec offered the 130,000 mt cargo of CPC Blend for Nov. 13-17 dates down to a $1.90/barrel premium to Dated Brent. Platts assessed CPC Blend CIF Augusta Suezmax at a $1.86/b premium on the day, lower by 95.5 cents/b.

BP, Itochu and Socar offered a 650,000-barrel cargo each of Azeri Light in the day's MOC for various November dates, with each outstanding at $15.55/b, $16.20/b and $15.70/b premiums, respectively, to Dated Brent.

Platts assessed Azeri Light CIF Augusta at a $15.69/b premium on Oct. 14, lower by $1.81/b day over day.

Platts is part of S&P Global Energy.

Platts EMEA Urals and Med Brent Crude Daily Rationales & Exclusions

Urals CIF Augusta differential <AAGXX00> assessment rationale:

Platts assessed Urals CIF Augusta down by 25.5 cents/b on the day. There were no bids or offers in the Platts Market on Close assessment process. Platts assessed the Urals CIF Augusta differential using a net forward to the Urals FOB Aframax and Suezmax assessment, with the FOB differentials unchanged on the day, reflecting steady market fundamentals.

Urals CIF Med <PCACE00> assessment rationale:

The Urals CIF Mediterranean assessment reflected the value of the Mediterranean Dated Brent Strip (AALDF00) plus the Urals CIF Augusta differential assessment (AAGXX00).

Urals RCMB (Recombined) <AALIN00> assessment rationale:

The Urals RCMB (Recombined) assessment reflected the value of the Platts Dated Brent assessment (PCAAS00) plus the Urals CIF Augusta differential assessment (AAGXX00).

Urals CIF Rdam <PCAFW00> assessment rationale:

Platts assessed Urals CIF Rotterdam down 3 cents/b on the day. There were no bids or offers in the MOC. Platts assessed the Urals CIF Rotterdam differential as a net forward to the Urals FOB Baltic assessment, with the FOB differentials unchanged on the day, reflecting steady market fundamentals.

Med Dated Brent Strip 13-28 Day <AALDF00> assessment rationale:

The Mediterranean Dated Brent Strip reflected the value of Forward Dated Brent 13-28 days ahead of the day of publication. Forward Dated Brent is assessed as a function of Platts assessments of second-month Cash BFOE (PCAAR00) and BFOE CFD differentials (PCAKA00, PCAKC00, PCAKE00, PCAKG00, AAGLU00, AAGLV00, AALCZ00).

CPC Blend CIF Augusta vs BTC Dtd Strip <AAHPL00> assessment rationale:

Platts assessed CPC Blend lower in a flat structure Nov. 3-23 using an outstanding offer for a 130,000 metric ton cargo in the Platts Market on Close assessment process.

Platts West African Crude Daily Commentary

- Landed value in Europe critical for FOB Nigerian sentiment
- Differentials must soften to compete with adjacent markets: traders

Differentials across the West African basin continued to face heavy bearish pressure Oct. 14, with freight rates remaining elevated and competitiveness in adjacent markets further weakening market sentiment.

Landed value for Nigerian crudes was crucial to how free-on-board differentials would move as the cycle progresses, sources said.

"Can you get light sweet Nigerian into Rotterdam at a certain value to compete with, for example, Ekofisk?" one Europe-based WAF trader said on the day. "The main variable there is freight, and that has been so hard to call."

A similar view was echoed by a second WAF trader, who emphasized the role played by freight and the problems associated with tanker chartering.

"Vessel availability is a huge risk," the second WAF trader told Platts. "Even if something looks good on paper, you then need to be able to find a vessel that can make the dates."

The second trader agreed that differentials for Nigerian crude grades would have to move lower in order to compete with adjacent markets such as the Mediterranean and Latin America.

Spot offers heard Oct. 14 included for Nigerian grade Usan with market sources reporting sellers showing a November-loading clip as low as a $9/b discount to benchmark Dated Brent. Platts assessed the grade lower by $1/b on the day at a $9.355/b discount.

Market participants were also awaiting the imminent circulation of WAF loading programs for the December cycle, with sources saying previously that they were expected to start in the coming days.

Platts is part of S&P Global Energy.

Platts US Pipeline Crude Daily Commentary

- Mars premium drops $1 to $1.25/b vs WTI
- Iran targets ships crossing Strait of Hormuz

Outright prices for crude oil on the US Gulf Coast were mixed Oct. 14 amid a spate of fresh attacks on shipping in the Strait of Hormuz.

Platts assessed Mars on the USGC at a $1.25/b premium to WTI, down $1 day over day. On an outright basis, Mars finished down 6 cents at $96.34/b.

Platts assessed WTI Midland unchanged at a 45-cent/barrel premium to WTI. On an outright basis, WTI Midland rose 94 cents to $95.54/b.

On a volume-weighted basis, Platts assessed WTI Midland at a 37-cent/b premium to WTI, down 10 cents day over day. This was based on a volume of 390,000 barrels.

In a statement to Reuters Oct. 14, Iranian officials said the country was actively targeting ships trying to cross the Strait of Hormuz after two vessels were reportedly struck during an attempted transit Oct. 13, according to voluntary reports received by the UK Maritime Trade Operations Center.

The attacks "support our view that Iran is deliberately seeking to put additional pressure on the oil market. We see a growing risk that the recovery in Middle Eastern exports during September and October will prove short-lived," Global Risk Management analyst Arne Rasmussen said.

Vessel transits via the strait climbed to 26 on Oct. 13 from a revised 24 the day prior, S&P Global Commodities at Sea data showed Oct. 14.

Meanwhile, Houthi militants have attacked Saudi Arabian Oil Co.'s sites in Dhahran, home to the company's headquarters, and in Riyadh, while vowing to continue targeting the company's oil facilities, according to an Oct. 14 statement from the Yemen-based group.

Platts US Gulf Coast Export Crude Daily Commentary

- AGS premium rises 81 cents to $96.92/barrel
- IEA slashes 2027 oil demand by 600,000 b/d

The Platts American Gulf Coast Select premium rose Oct. 14, as the International Energy Agency released its latest monthly Oil Market report.

Platts, part of S&P Global Energy, assessed AGS, the value for barrels of WTI Midland loaded on an FOB basis, at $96.92/barrel, up 81 cents from the previous session.

The AGS premium to cash increased by 13 cents to $3.19/barrel, while its discount to the forward Dated Brent strip narrowed from $11.84/b to $10.76/b.

Month-decade premiums to WTI at the Magellan East Houston terminal were unchanged, with the premium for first-decade loaders assessed at MEH plus 75 cents/b, second-decade loaders at MEH plus 50 cents/b, and third-decade loaders at MEH plus 20 cents/b.

The International Energy Agency, in its latest monthly Oil Market Report released Oct. 14, cut its forecasts for global oil demand this year and slashed its estimate for next year's demand recovery, warning that diesel supplies would remain tight well into next year as the Middle East war continued to hit supplies and fuel pump prices.

World oil demand was set to decline by an average of 2.6 million b/day in 2026 as the impact of the war in the Middle East weighed on markets, with demand growth not expected to return to positive territory until March 2027, the IEA said. The agency kept its average 2026 world oil demand at 102.4 million b/d but cut 2027 demand to 104.4 million b/d from 105 million b/d in its September report, leaving 2027 consumption at about 620,000 b/d, or 0.6%, below 2025 levels.

Platts Canadian Pipeline Crude Daily Commentary

- Canadian sweet crude prices continue to climb
- WCS differentials weaken across all hubs

Canadian sweet crude differentials continued to strengthen on Oct. 14, as Western Canadian Select differentials softened across all locations.

Syncrude Sweet Premium at Edmonton, Alberta, rose for the seventh-straight reporting day, moving to its strongest differential since Aug. 20. Mixed Sweet at Edmonton, Alberta, also strengthened from the previous day, rising to its strongest differential since Sept. 11. Platts assessed Syncrude Sweet Premium and Mixed Sweet at premiums of $14.25/barrel and $2.40/b, respectively, to the WTI CMA, narrowing by $0.75/b and $1.40/b day over day.

Market sources told Platts that lower supply and previous refinery turnarounds are contributing to the higher sweet crude prices.

"I would imagine because it's all diesel, and cracks are incredible," a US-based crude trader said. "There was also a lot of turnaround activity in September and October, so the market was probably short to begin with."

Western Canadian Select differentials collectively weakened, following the previous day's short-lived rebound. Platts assessed WCS at Hardisty, Alberta, at a $25.55/b discount to the WTI CMA, widening by 5 cents/b from the previous day. WCS at Cushing, Oklahoma, weakened by 35 cents/b, and WCS at Nederland, Texas, softened by 60 cents/b. Platts assessed WCS Cushing and WCS Nederland at discounts of $17.70/b and $16.75/b, respectively, to the WTI CMA.

Platts is part of S&P Global Energy.

Platts Latin American Crude Daily Commentary

- Guyanese differentials drop $3.45/b vs Dated Brent strip
- Guyana sets December record with 34 cargoes
- Brazilian grades fall $2.70/b on softening landing levels

Guyanese and Brazilian differentials continue to decline Oct. 14 amid a punitive freight market, while Guyana pushes toward record output in December, with 34 cargoes in the loading program.

Guyanese differentials fell $3.45/barrel against the Latin American Dated Brent strip, as November loadings of Unity Gold and Payara Gold were heard to have traded at weaker FOB equivalents into Europe.

Platts, part of S&P Global Energy, assessed Unity Gold and Payara Gold at discounts of $25/b and $25.45/b, respectively, to the Dated Brent strip.

"Ultimately, producers have got to keep their barrels moving and retain market share to avoid shutting in production," said a trader familiar with the grades, explaining why Guyanese differentials have been struggling to find a floor.

Meanwhile, Guyana's Uaru Gold crude, expected to hit the market in December, will be another medium-sweet grade with a quality most similar to that of Guyana's flagship Liza crude, according to a preliminary assay seen by Platts Oct. 14.

Platts assessed Liza at a $26/b discount to the Latin American strip, and another Europe-based trader said he suspected Uaru would be priced near 25 cents/b to 50 cents/b below the other Guyanese grades as it hits the market.

Guyana is set to load a record 34 million barrels of crude across 34 cargoes, each carrying 1 million barrels, in December, including four cargoes of Uaru Gold crude, according to a copy of the producers' provisional loading schedule seen by Platts Oct. 14.

In Brazil, Platts assessed both Tupi and Mero $2.70/b lower against the Latin American Dated Brent strip, at discounts of $24.95/b and $20.10/b, respectively. December-arrival barrels of Tupi were heard to have traded at about an equivalent to November Dated Brent plus "low $10s"/b. Simultaneously, the Brazil-East VLCC freight run continues its decline to 700 worldscale points, or about $36.39/b, as of Oct. 14.

Platts Latin American Dated Brent Strip Rationale

Platts Latin American Dated Brent strip <AAXBR00> assessment rationale:

This assessment reflects the value of forward Dated Brent at the US close for the loading period reflected in the Latin American crude market.

Dated Brent-related differentials for all Latin American crudes reflect values relative to the value of forward Dated Brent that prevails at the time of loading. As an example, on July 1, Platts assesses the value of Latin American crudes loading in the month of August. Therefore, the Dated Brent related basis for Platts Latin American crude assessments on July 1 reflects the average of prevailing Dated Brent swaps for Aug. 1-31.

Platts is part of S&P Global Energy.

Platts US Crude Daily Rationale & Exclusions

WTI Midland vs. ICE HOU <WMVIH00> assessment rationale:

This assessment reflects the value of West Texas Intermediate crude in Midland, Texas, as a differential to the ICE Midland WTI futures contract, known as HOU.

Exclusions: Platts did not exclude any market data from the Oct. 14 assessment process.

Platts is part of S&P Global Energy.

Platts WTI Midland Crude Bids, Offers and Trades

Bids: No Bids
Offers: No Offers
Trades: No Trades
This assessment commentary applies to the following market data codes: WTI Midland vs. ICE HOU <WMVIH00>

Platts Canadian Crude Daily Rationale & Exclusions

Pacific Cold Lake FOB Westridge vs. ICE Brent CMA <ATMXB00> assessment rationale:
Platts assessed Pacific Cold Lake on Oct. 14 based on price movements in Hardisty, Alberta.
Pacific Dilbit FOB Westridge vs. ICE Brent CMA <ATMXF00> assessment rationale:
Platts assessed Pacific Dilbit Oct. 14 based on the most recent spread to Pacific Cold Lake of minus $1/barrel, as well as price movements in Hardisty, Alberta.
Pacific Cold Lake FOB Westridge vs. Dubai CMA <ATMXI00> assessment rationale:
Platts assessed Pacific Cold Lake on Oct. 14 based on price movements in Hardisty, Alberta.
Pacific Dilbit FOB Westridge vs. Dubai CMA <ATMXJ00> assessment rationale:
Platts assessed Pacific Dilbit Oct. 14 based on the most recent spread to Pacific Cold Lake of minus $1/b, as well as price movements in Hardisty, Alberta.
Exclusions: Platts did not exclude any market data from the Oct. 14 assessment process.
Platts is part of S&P Global Energy.

Platts Canadian Crude Bids, Offers and Trades

Bids: No bids reported.
Offers: No offers reported.
Trades: No trades reported.

Platts Liza FOB Guyana Daily Rationale & Exclusions

Liza FOB Guyana <ALIZA00> assessment rationale:
Platts assessed Liza crude on Oct. 14 based on its last-known spread to Unity Gold. No activity for Liza crude was reported in the Oct. 14 Platts Market on Close assessment process.
Platts is part of S&P Global Energy.
Exclusions:
Platts did not exclude any market data from the Oct. 14 Platts Market on Close assessment process.

Platts Unity Gold FOB Guyana Daily Rationale & Exclusions

Unity Gold FOB Guyana <AUNIA00> assessment rationale:
Platts assessed Unity Gold crude on Oct. 14 based on price movements of competing crudes and a weaker indication of a November-loading cargo that traded around Dated Brent minus $25/barrel on an FOB basis. No activity for Unity Gold crude was reported in the Oct. 14 Platts Market on Close assessment process.
Platts is part of S&P Global Energy.
Exclusions:
Platts did not exclude any market data from the Oct. 14 Platts Market on Close assessment process.

Platts amends Abu Dhabi crude OSPs publication

Platts, part of S&P Global Energy, has updated its publication of Abu Dhabi crude official selling prices effective Oct. 8, 2026, in line with changes announced by Abu Dhabi National Oil Co. (ADNOC).

In July, ADNOC said it would adopt a prompt-month pricing methodology based on the Platts Dubai benchmark (PCAAT00) plus an ADNOC-announced differential for the OSPs of its Abu Dhabi onshore and offshore crude grades, with effect from November 2026 loadings. ADNOC added that it would announce the OSP differentials for Murban, Das, Umm Lulu and Upper Zakum in the month prior to the delivery month.

Accordingly, Platts will publish the monthly OSP differentials for the four grades, basis Platts Dubai, beginning with the November differentials issued by ADNOC on Oct. 8, 2026.

Platts first announced the change in a subscriber note published on Aug. 31, 2026.

The OSP differentials are published under the following reinstated codes:

Grade	OSP Diff to Dubai
Murban	AAIOS00
Umm Lulu	OSLUD00
Das Blend	AAXPL00
Upper Zakum	AAIOV00

Platts previously published the OSP differentials under these codes until May 2021, when they were then suspended due to a change in the ADNOC pricing methodology.

From November, the existing codes for the outright OSPs for Murban (AAIKZ00), Upper Zakum (AAILC00), Das Blend (AAXPH00) and Umm Lulu (OSLUF00) will remain unchanged. Platts will publish the outright OSPs of the four grades following the publication of the average of Platts Dubai crude assessments during the month of loading.

In view of the changes, Platts is no longer updating the codes reflecting Upper Zakum, Das Blend and Umm Lulu OSP differentials against Murban, as well as the codes for all four grades, including Murban, calculated against the monthly average of Platts cash Dubai 1st Line assessment in the month of trade.

The following codes will no longer be updated from October:

Grade	Diff to Dubai	Diff to Murban OSP
Murban	AOSPA00	
Umm Lulu	AOSPB00	AOSPE00
Das Blend	AOSPC00	AOSPF00
Upper Zakum	AOSPD00	AOSPG00

ADNOC's OSPs are published in the Platts price database and on Platts Global Alert page 1051.

Platts launches additional assessments of Venezuelan crude Oct. 5

Platts, part of S&P Global Energy, has launched daily assessments for Venezuela's Merey 16 crude on a free-on-board basis from Venezuela, as well as assessments for Boscan and Hamaca on a delivered-at-port basis along the US Gulf Coast, effective Oct. 5.

The Merey 16 assessment reflects the value of waterborne Merey 16 crude loading 30-60 days forward, on a FOB basis from the Port of Jose Terminal in Venezuela.

The assessments for Boscan and Hamaca reflect the value of waterborne Boscan and Hamaca delivering 30-60 days forward, on a DAP basis along the United States Gulf Coast.

The typical cargo size for all three assessments is 500,000 barrels.

The assessments are published as an outright price, as well as differentials to the Latin America Dated Brent strip, Latin America Brent Futures strip and Latin America WTI strip, which align with a 30–60-day delivery window.

The new symbols for the assessments are as follows:

Symbol	Description
PRUCA00	Merey 16 FOB Venezuela
PRUCB00	Merey 16 FOB Venezuela vs Latin American Brent Futures Strip
PRUCC00	Merey 16 FOB Venezuela vs Latin American WTI Strip
PRUCD00	Merey 16 FOB Venezuela vs Latin American Dated Brent Strip
PRUCE00	Boscan DAP USGC
PRUCF00	Boscan DAP USGC vs Latin American Brent Futures Strip
PRUCG00	Boscan DAP USGC vs Latin American WTI Strip
PRUCH00	Boscan DAP USGC vs Latin American Dated Brent Strip
PRUCI00	Hamaca DAP USGC
PRUCJ00	Hamaca DAP USGC vs Latin American Brent Futures Strip
PRUCK00	Hamaca DAP USGC vs Latin American WTI Strip
PRUCL00	Hamaca DAP USGC vs Latin American Dated Brent Strip

Merey 16 crude has a typical API gravity of 16 degrees and sulfur content of 3.4%. Boscan crude has a typical API gravity of 10.6 degrees and sulfur content of 5.4%. Hamaca crude has a typical API gravity of 21.2 degrees and a sulfur content of 2.2%.

In the absence of bids, offers, and trades for these crudes, Platts may assess the crude based on spreads to comparable grades. Platts may also use market information provided on a FOB basis to inform the DAP assessments.

Platts assessments reflect non-sanctioned material. Bids and offers that contain statements surrounding delivery of embargoed or sanctioned materials will be reviewed by Platts for publication and may be subject to normalization in value.

These additional assessments follow the launch of Merey 16 DAP USGC assessments March 31 .

The new assessments will be available on Platts Global Alert and Platts Crude Oil Alert pages 280 and 281. They will be published in Crude Oil Marketwire, Latin American Wire and Oilgram Price Report.

Please send any comments or feedback to **americas_crude@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts publishes Amenam Blend, CJ Blend as FOB Nigeria spot assessments from Oct. 1, 2026

Platts, part of S&P Global Energy, now publishes daily spot assessments for Nigerian crude grades Amenam Blend and CJ Blend on a FOB Nigeria basis, replacing their Market Parity Prices, effective Oct. 1, 2026.

This followed feedback from market participants on the spot market liquidity of both grades and subsequent demand for an assessment reflecting spot market values.

Platts previously published calculated MPPs for Amenam Blend and CJ Blend reflecting the gross product worth of each grade on both an outright basis and as a differential to Dated Brent.

The assessment codes are unchanged, with the methodology changed to spot market assessments reflecting the observed value of each grade on the open market.

The Amenam Blend and CJ Blend FOB Nigeria assessments reflect standard cargo sizes of 950,000 barrels and 650,000 barrels, respectively, loading 25-55 days ahead from the assessment date and pricing five days after bill of lading as standard.

This follows the same assessment period and pricing basis as Platts' existing West African crude oil spot assessments.

For assessment purposes, Platts now publishes bids and offers for cargoes of 950,000-1.05 million barrels inclusive for Amenam Blend, and 650,000-1.05 million barrels inclusive for CJ Blend.

Cargoes differing from the standard 950,000-barrel and 650,000-barrel sizes may be subject to normalization for assessment purposes.

Both Amenam Blend and CJ Blend are assessed as a differential to the 30-60 day forward Dated Brent strip and published as an outright price.

This change impacts the following codes and includes assessment name changes:

Code	Previous Name	New Name
AAXTI00	Amenam Blend Market Parity Price	Amenam Blend FOB Nigeria $/b
AMENA00	Amenam Blend MPP vs WAF Dated Strip	Amenam Blend FOB Nigeria vs Dated Brent $/b
APIRR00	CJ Blend MPP	CJ Blend FOB Nigeria $/b
APIRC00	CJ Blend MPP vs WAF Dated Strip	CJ Blend FOB Nigeria vs Dated Brent $/b

Amenam Blend and CJ Blend have sulfur contents of 0.11% and 0.118% and API Gravity readings of 38.7 and 33.5, respectively, according to assays seen by Platts.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The assessments reflect a 1630 London time stamp and follow the London publishing schedule.

The assessments complement Platts' existing suite of spot assessments for West African crudes, and will be published on Platts Crude Alert pages 1230 and 1231, and in Crude Oil Marketwire.

Platts' Amenam Blend and CJ Blend Market Parity Prices were previously published on Platts Crude Alert page 1270 and in Crude Oil Marketwire.

This follows a decision note published on Sept. 1, 2026 that can be found here.

Please send all feedback, comments or questions to **europe_crude@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available to the public upon request.

Description update for Amenam Blend and CJ Blend as FOB Nigeria symbols

The following CJ Blend and Blend Nigeria symbols have had their Description updated, as summarized below. These updates will take effect from Oct. 1, 2026.

Platts to assess Forties crude sulfur de-escalator at 15 cents/b from October

Effective Oct. 1, 2026, the sulfur de-escalator to be applied to Forties crude oil cargoes and related instruments in the Platts North Sea assessment process will be 15 cents/barrel per 0.1% weight of sulfur over the 0.6% weight standard, unchanged from September.

The de-escalator should apply to cargoes loading from Oct. 1.

Platts, part of S&P Global Energy, has assessed this de-escalator level after reviewing the change in outright crude value, product cracks, and the difference in value between North Sea crudes.

A rationale for the decision will be available shortly on **www.platts.com.**

Platts guidelines for its sulfur de-escalator use three significant figures for the determination of sulfur-related payment.

Please send any feedback or questions to **europe_crude@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

New Amenam Blend and CJ Blend as FOB Nigeria monthly average symbols

The following Amenam Blend and CJ Blend as FOB Nigeria monthly average symbols have been created under the Market Data category MPP (Crudes: Market Parity Prices).

They will appear on-

Publications - Crude Oil Marketwire.

Fixed Pages - Platts Crude Alert pages PCR1230 and PCR1231.

They are scheduled to begin updating Oct. 1, 2026.

Platts proposes to amend rollover date of Asian Dated Brent Strip at London close

Platts, part of S&P Global Energy, is proposing to amend the rollover date of its Asian Dated Brent Strip at London close assessment to the first publication day of the month, from Dec. 1, 2026.

The proposed change, which follows Platts review of historical data sets, would align the ADB Strip at London close assessment with the current rollover date of its ADB Strip at Asia close assessment.

© 2026 by S&P Global Inc. All rights reserved.

Platts opens consultation on West African crude Market Parity Price assessments

As part of its commitment to open and transparent pricing, Platts, part of S&P Global Energy, would like to invite feedback on its West African (WAF) crude Market Parity Price (MPP) assessments and methodology.

During this consultation period, Platts will review its full current suite of MPPs across West Africa. Since the launch of the first WAF crude MPPs in 2018, the suite of assessments has grown from six grades to 23 grades. As of September 2026, Platts assesses MPPs for grades from Equatorial Guinea, Gabon, Ghana and Nigeria.

The focus of the consultation includes, but is not limited to:

- Cost and shipping assumptions incorporated in each grade's MPP model.
- The basket(s) of comparable spot assessments used to adjust each MPP in line with market fundamentals.
- Grades that are not currently assessed as MPPs that could be launched.
- Current MPPs that are sufficiently liquid in the spot market to consider migrating to Platts' spot assessment methodology.

Platts currently uses two baskets defined by density to calculate the spot market adjustment for its MPPs using the following assessment codes:

Light Basket	Heavy Basket	Grade	Differential vs Dated Brent	Outright	Grade
Differential vs Dated Brent	Outright	Agbami	AAGXN00	AAQZB00	Bonga
PCNGD00	PCNGC00	Bonny Light	AAGXL00	PCAIC00	Dalia
AAQYY00	AAQYX00	Forcados	AAGXP00	PCABC00	Girassol
AASJD00	AASNL00	Qua Iboe	AAQZC00	PCAID00	Hungo
AASJF00	AASLJ00				

Further detail on the current suite of WAF crude MPPs that Platts publishes and their underlying methodology, including the reference grades that Platts is specifically seeking feedback on, can be found here.

Additionally, Platts welcomes feedback on its current suite of spot assessments. The current list of WAF crude spot assessments that Platts publishes, and their underlying methodology, can be found here.

Platts recently announced that two current MPPs, Amenam Blend and CJ Blend, will be migrated to spot assessments from Oct. 1, 2026. The relevant subscriber note can be found here.

Please send all comments to **europe_crude@spglobal.com** and **pricegroup@spglobal.com** by Dec. 1, 2026.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts proposes to assess FOB Johan Sverdrup as a freight netback from CIF Rotterdam assessment from Jan. 4, 2027

Platts, part of S&P Global Energy, proposes to assess Johan Sverdrup FOB Mongstad as a freight netback from its existing CIF Rotterdam Johan Sverdrup assessment through the application of a Johan Sverdrup freight netback, effective Jan. 4, 2027.

Under this proposal, Platts would stop publishing bids, offers and trades on an FOB Mongstad basis for assessment purposes from Jan. 4, 2027, while continuing to publish bids, offers and trades for Johan Sverdrup cargoes on a delivered Rotterdam basis.

In practice, this would mean the FOB Mongstad assessment would be derived by applying a Johan Sverdrup freight netback value and adjusting for the typical sailing time between Mongstad and Rotterdam of two days.

This proposal reflects feedback from market participants that a significant portion of trades in the over-the-counter market are on a delivered, rather than FOB, basis.

Currently, Platts nets CIF/CFR Rotterdam indications back to a FOB-equivalent value for use in the FOB Mongstad Johan Sverdrup assessment using the Mongstad-Rotterdam Freight Adjustment Factor, which reflects 80% of the associated freight and port fee costs. In the absence of indications, the CIF Rotterdam Johan Sverdrup assessment is currently a freight net-forward from the FOB Mongstad assessment using 100% of the assessment day's freight costs.

Under this proposal, the starting point of the Johan Sverdrup assessment suite would be the CIF Rotterdam curve, with the FOB Mongstad curve then calculated as a freight netback from the CIF Rotterdam curve.

Johan Sverdrup freight netback value

Platts proposes to launch a Johan Sverdrup freight netback value that would reflect 100% of freight costs for this proposed netback.

The existing Mongstad-Rotterdam Freight Adjustment Factor [FMGRM00] used for Troll in Dated Brent, and currently for Johan Sverdrup, which reflects 80% of freight costs, would not be impacted by this proposal.

This proposed netback value for Johan Sverdrup would reflect a higher proportion of cargoes remaining in Europe and a thinning premium associated with the inherent optionality of FOB Johan Sverdrup cargoes, according to vessel-tracking data seen by Platts and feedback from market participants.

The Johan Sverdrup freight netback value would be calculated by applying the 10-day rolling average of Platts Dirty 80,000 metric ton Cross-UK/Continent Worldscale assessment [TDUUW00] to the Mongstad-Rotterdam flat rate and adding the Rotterdam port fee.

The Rotterdam port fee is typically updated annually and published in a subscriber note by Platts on the first working day of each calendar year. The Mongstad-Rotterdam flat rate used in the calculation will be updated in line with Worldscale Association.

The impacted assessments include:

Assessment Name	Symbol	Monthly Average
Johan Sverdrup FOB Mongstad	AJSVA00	AJSVA03
Johan Sverdrup FOB Mongstad vs North Sea Dated Strip	AJSVB00	AJSVB03

All other aspects of Platts existing Johan Sverdrup CIF Rotterdam methodology would remain unchanged.

Platts currently publishes Johan Sverdrup CIF, CFR and DES Rotterdam bids and offers of 700,000-barrel cargoes arriving between 12 days to a month-ahead, pricing five days after deemed BL as standard.

Further detail on the existing Johan Sverdrup CIF Rotterdam methodology can be found in the Platts EMEA Crude methodology guide.

Please send all feedback, comments, or questions to **pl_crudeoileurope@spglobal.com** and **pricegroup@spglobal.com** by Oct. 23, 2026. For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available to the public upon request.

New delivered Russian ESPO Blend crude assessment symbols

The following delivered Russian ESPO Blend to Shandong assessment symbols have been created under the Market Data category RP (Crudes: at 16:30 Singapore).

They will appear on:

- Publications - Crude Oil Marketwire report and Oilgram Price Report.
- Fixed Pages - Platts Global Alert pages PGA2238, PGA2239, PGA2205 and PGA2206 and Platts Crude Oil Alert pages PCR2238, PCR2239, PCR2205 and PCR2206.

They are scheduled to begin updating on July 1, 2026.

Platts to update European, African crude oil freight netbacks for 2026

Effective Jan. 2, Platts, part of S&P Global Energy, will reflect updated Worldscale freight rates for 2026 across its European and African crude oil price assessments.

All applicable flat rate values are available via Worldscale.

The following freight netback and net forward calculations will be updated to reflect the changes:

Dated Brent CIF Rotterdam

Sullom Voe to Rotterdam flat rate for Brent/Ninian Blend.

Hound Point to Rotterdam flat rate for Forties Blend.

Sture to Rotterdam flat rate for Oseberg.

Teesside to Rotterdam flat rate for Ekofisk.

Mongstad to Rotterdam flat rate for Troll.

The Rotterdam port charge used will be 13 cents/b.

Urals and Mediterranean

Primorsk to Rotterdam flat rate for Urals ex-Primorsk

Gdansk to Rotterdam, Primorsk to Rotterdam and Ust-Luga to Rotterdam flat rates for Urals ex-Baltic.

Ust-Luga to Rotterdam flat rate for KEBCO FOB Ust-Luga.

Ceyhan to Augusta flat rate for Azeri Light FOB Ceyhan.

Es Sider to Augusta flat rate for Es Sider.

Novorossiisk to Augusta flat rate for Urals FOB Novorossiisk and KEBCO FOB Novorossiisk.

Novorossiisk CPC terminal to Augusta flat rate for CPC FOB Aframax Novorossiisk CPC terminal and CPC FOB Suezmax Novorossiisk CPC terminal.

Sidi Kerir to Augusta flat rate for Iranian Light and Iranian Heavy.

Skikda to Augusta flat rate for Saharan Blend.

Supsa to Augusta flat rate for Azeri Light FOB Supsa/Batumi.

The Rotterdam port charge used will be 13 cents/b.

Latin America delivered-Rotterdam

P75 FPSO to Rotterdam for Buzios.

Please send all comments to **europe_crude@spglobal.com** and **pricegroup@spglobal.com** .

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts to maintain weightings in North Sea-Rotterdam Freight Adjustment factor for 2026

Platts, part of S&P Global Energy, confirms it will maintain the existing weightings in the weighted average flat rate used in the North-Sea Rotterdam Freight Adjustment Factor (FAF) for 2026.

Platts calculates the WTI Midland Freight Adjustment Factor (FAF), reflected in Dated Brent, as a weighted average based on relative production of Brent, Forties, Oseberg, Ekofisk and Troll.

The weightings for 2026 will be unchanged, as follows:

- Teesside: 37%
- Hound Point: 30%
- Mongstad: 17%
- Sture: 10%
- Sullom Voe: 6%

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

These weightings will be applied to the 2026 Worldscale flat rates, once available, to determine the weighted average flat rate.

The 10-day rolling average of the Platts Dirty Cross-UK/Continent 80,000 metric ton Worldscale freight assessment [TDUUW00], and the Rotterdam port fee will be applied to the average flat rate and multiplied by 80%.

Platts publishes the North Sea-Rotterdam Freight Adjustment Factor, used for the adjustment of WTI Midland from CIF Rotterdam to FOB North Sea-equivalent value, to the code FSFRM00.

The FAF is published at 11 am London time ahead of the Platts Market on Close assessment process to pages PGA and PCR 1218. It is also published in Crude Oil Marketwire.

Please send all feedback and questions to **europe_crude@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make feedback not marked as confidential available to the public upon request.

Platts Quality Premiums for January-loading North Sea crude cargoes

Effective Dec. 1, the North Sea quality premiums for January-loading North Sea crude oil cargoes will be as follows:

Crude grade	Quality premium
Oseberg	1.0380
Ekofisk	0.7095
Troll	1.1580

Quality premiums are available on Platts Global Alert pages 1210 and 1212 and in the Platts Pricing Database under the following codes:

Grade	Current month	Month ahead
Oseberg	AAXDW00	AAXDX00
Ekofisk	AAXDY00	AAXDZ00
Troll	ATFNB00	ATFNA00

The quality premiums are published to four decimal places and at 60% of the net price differences between Ekofisk, Oseberg, Troll and the most competitive grade of crude among Brent, Forties, Oseberg, Ekofisk, Troll and WTI Midland during the month prior to the announcement.

Platts, part of S&P Global Energy, announces quality premiums on the first publishing day of each month, a month prior to the escalators coming into effect.

Please send any comments and queries to **europe_crude@spglobal.com** and **pricegroup@spglobal.com** .

Upstream CI values are modelled on a marginal basis and are published monthly. Carbon Intensity Premiums are assessed daily. Venezuela's Orinoco Belt upstream marginal carbon intensity is calculated using only the Hamaca basin.

*Upstream marginal CI number is assessed from the field to the storage terminal. **Transport CI is calculated from storage terminal to refinery gate and for shipping routes assumes an Aframax vessel.

Dated Brent Monthly Update

Platts Dated Brent September 2026 update

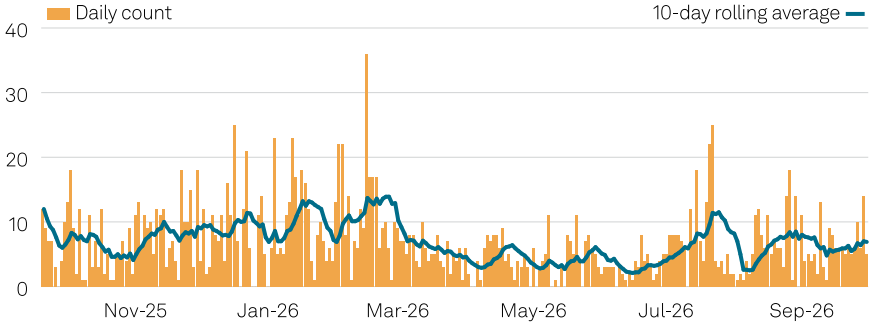

- Dated Brent surges past $100/b to highs last seen in April, reflecting mounting global supply risks.
- Physical differentials spike in mid-September as European refiners rush to cover disrupted Middle East flows.
- Stellar margins and tight balances keep competition fierce for feedstock barrels heading into the next trading cycle.

Dated Brent price and market structure ($/b)

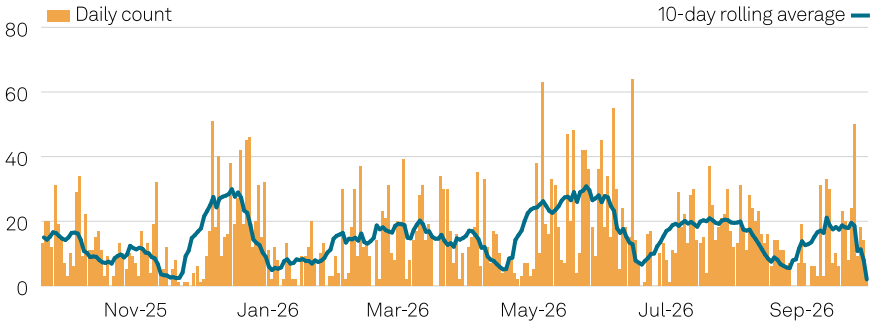

Structure values represent the structure between Platts' Week 2 and Week 7 Brent CFD assessments

Dubai Monthly Update

Platts Dubai/Oman September 2026 update

- The front-month Dubai cash/paper spread averaged $21.60/b, up from $9.59/b in August.
- Middle East crude differentials hit March highs on falling Iranian and Russian crude supply, Saudi East-West pipeline outage.
- Differentials cool toward end-September as Middle East producers and traders ramp up spot offers.

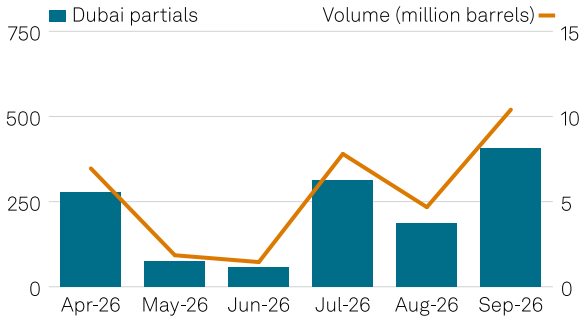

Cash Dubai price and Dubai cash/futures spread ($/b)

Partials trade count

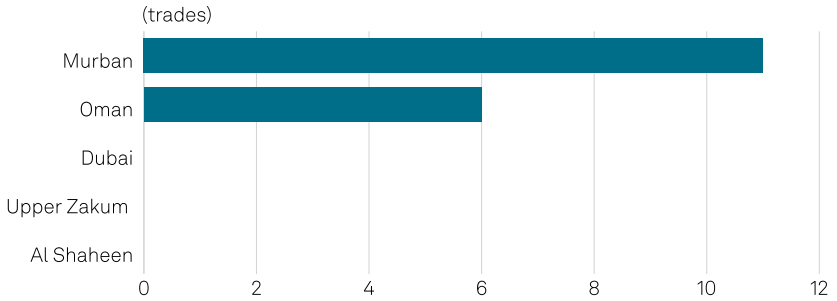

- A total of 416 partials were traded in the Platts Market on Close assessment process in September, of which 407 were for November Dubai partials and nine for November Oman partials.

Total number of cargo convergences

- 17 convergences were declared in September through the partials mechanism.
- Two 500,000-barrel Murban cargoes traded on the MOC in September.

Grades declared upon convergence in September MOC

USGC Monthly Update

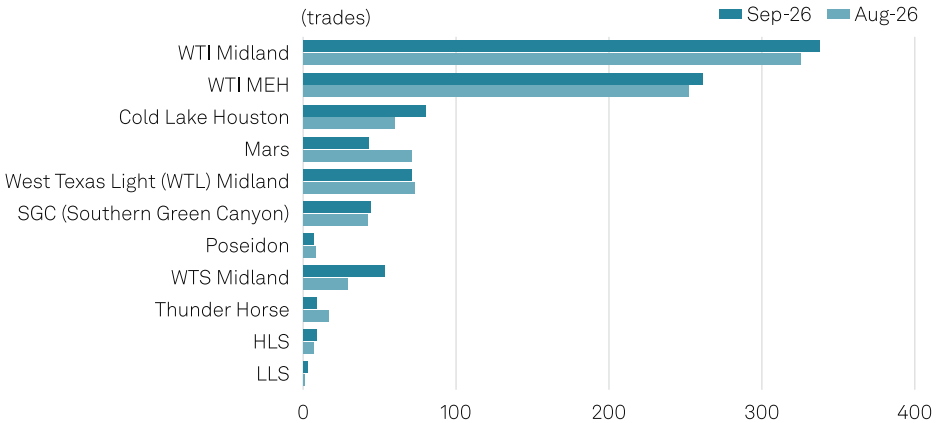

Platts USGC Crude September 2026 update

- Reported trade activity increased in September, with 338 transactions for WTI Midland and 261 for WTI MEH.
- West Texas Intermediate crude on an FOB basis weakened in September, as Aframax freight to Europe strengthened, and the WTI-Brent spread widened as the war boosted freight rates.
- Gulf Coast sour crude differentials weakened in September, as the war in the Middle East reduced buying interest for sours.

3-DAY TRAINING

Oil Markets Fundamentals & Commercial Strategies

Oct 20-22, 2026 | London	Nov 3-5, 2026 | Singapore	Dec 8-10, 2026 | Dubai	Jan 12-14, 2027 | Houston
Jan 26-27 | Abuja	Mar 23-25, 2027 | Singapore	Apr 27-29, 2027 | Istanbul	Apr 27-29, 2026 | London

As the oil and gas industry navigates new challenges, staying ahead requires a sharp understanding of market dynamics. Our prestigious program will equip you with a comprehensive understanding of the forces shaping global oil markets today, including supply and demand shifts, price forecasting, trading, and risk management strategies

.

Equip yourself to make confident decisions in a complex and evolving market.

WHO SHOULD ATTEND

The course would be suitable for:

- Technical and non-technical professionals, with experience or new recruits, from crude oil and refined products companies
- Traders; Brokers; Analysts
- Personnel from Planning, Business Development, Commercial, Distribution, and Project
- Shippers

CPD CERTIFIED

Energy

2-DAY TRAINING

Upstream Fundamentals and Economics

June 2-3 | Houston

Fossil fuels dominate the energy mix representing over 80% of global energy demand. With geopolitical tensions influencing supply volumes and lower price, the S&P Global Commodity Insights "Upstream Fundamentals and Economics" course will equip you with the insights and strategies needed to navigate a constantly changing environment, meet challenges with informed decisions, and drive business growth.

Our prestigious Upstream Fundamentals and Economics Training is a great opportunity to hear from a range of S&P Global experts sharing their expertise, regional trends and industry insights, as well as concrete case studies and analyses.

WHO SHOULD ATTEND

This course would be suitable for:

- Technical and non-technical professionals, with experience or new recruits, from crude oil and refined products companies
- Governments, EPCs, OEMs, Suppliers, Investors
- Personnel from Projects, Planning, Business Development, Commercial

Instructors
