Market Commentary

Platts European Gasoline Daily Market Analysis

- Eurobob gasoline barges drop $33/mt
- Trading activity slows amid poor liquidity
- Mediterranean faces tight supply, high freight

European gasoline prices extended losses Oct. 14, with market sources pointing to thin liquidity and technical selling rather than an easing of underlying supply-demand fundamentals.

Platts assessed FOB AR Eurobob gasoline barges down $33/metric ton at $1,199.25/mt on Oct. 14, while the equivalent cash differential narrowed $13.25/mt to $132.25/mt.

Market participants reported a slowdown in trading activity as weaker flat prices weighed on refining margins, while liquidity in the paper market was heard to be particularly limited.

"The move down in cash in Amsterdam-Rotterdam-Antwerp [is] spooking the market a bit," a European trader said. "Cash had been really performing but then just dropped off a cliff."

The trader added that liquidity had been "really poor on paper," with participants increasingly reluctant to engage in the market toward the end of the year.

Against the softer Eurobob complex, higher-octane grades remained supported. Broker sources reported a 98 RON gasoline barge trading at a $245/mt premium over the November E5 Eurobob swap.

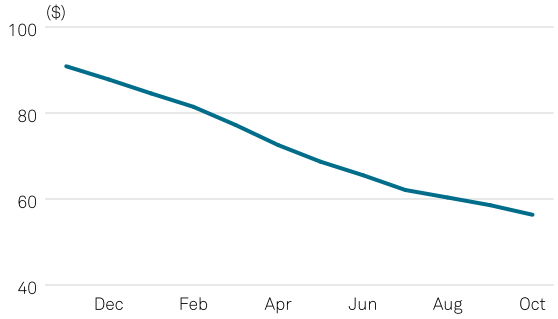

Platts assessed FOB AR 98 RON gasoline barges up $5.25/mt at $1,311.75/mt on Oct. 14. Reformate rose by the same amount to $1,333/mt, with sources reporting continued export demand for the high-octane blendstock.

In the Mediterranean, gasoline availability was heard to be tight, although elevated freight costs continued to challenge flows from Northwest Europe. Sources said both the Eastern and Western Mediterranean were tight, while some more restrictive gasoline specifications could limit the pool of suitable supply. Nevertheless, the FOB Med cargo cash differential fell $11.50/mt to $105.50/mt on the day.

At the same time, reformate demand remained in focus amid limited MTBE availability. Sources said scarce Asian MTBE arrivals had increased interest in reformate as an alternative octane booster, including for oxygenated gasoline blending.

A Mediterranean market source said elevated

MTBE prices were supporting E5 gasoline relative to E10, while reformate could increasingly be drawn into blending if MTBE remained expensive. Refinery maintenance was also seen lending support to reformate, although the source expected prices could stabilize from already elevated levels.

Export economics, however, remained challenging. Freight costs were heard keeping European gasoline arbitrages uneconomical, while European naphtha was also supported by a wider East-West spread. Market sources said gasoline pricing would need to adjust to improve the competitiveness of European barrels into export destinations.

Platts assessed the front-month FOB AR Eurobob barge swap at $1,067/mt, down $19.75/mt on the day, with the equivalent crack $2.54/barrel lower at $24.83/b.

The October/November spread fell $15/mt to $85/mt, while November/December dropped $7/mt to $61/mt.

The October Mediterranean/North gasoline differential, representing the spread between the October FOB Mediterranean gasoline swap and the equivalent FOB ARA Eurobob barge swap, was unchanged at a $15/mt premium. The November differential fell 50 cents/mt to an $18/mt premium.

Platts is part of S&P Global Energy.

a $25/mt premium to Eurobob barges, unchanged on the day, using information heard in the market in the absence of competitive indications in the Platts Market on Close assessment process. A daily structure of $3.54/mt was applied through the curve.

Gasoline Eurobob FOB AR Barge <AAQZV00> assessment rationale:

Platts assessed the Eurobob gasoline barges at $1,199.25/mt and at a $132.25/mt premium to the Eurobob October swap, down from a $145.50/mt premium, based on a competitive traded bid for mid-window dates at $1,199.50/mt registered in the Platts Market on Close assessment process. A daily structure of $3.54/mt was applied through the curve.

Gasoline E10 Eurobob FOB AR Barge <AGEFA00> assessment rationale:

Platts assessed the E10 Eurobob gasoline barge at a $45.75/mt discount to E5 barges, up from a $37.50/mt discount, using information heard in the market in the absence of competitive indications in the Platts Market on Close assessment process.

Exclusions: None.

Platts is part of S&P Global Energy.

Platts NWE Med Gasoline Cargo Daily Rationale & Exclusions

Gasoline 10ppmS CIF NWE Cargo assessment rationale:

Platts assessed CIF NWE gasoline cargo at $1,284.25/metric ton and at a $85/mt differential to physical Eurobob, unchanged on the day, using information heard in the market in the absence of competitive indications in the Platts Market on Close assessment process. A daily structure of $3.54/mt was applied through the curve.

Gasoline Prem Unleaded 10ppmS FOB Med Cargo assessment rationale:

Platts assessed the FOB Mediterranean gasoline cargo assessment at $1,1905.50/mt, at a $23.50/mt premium to balmo swaps, up from a $20.50/mt premium, and at a $105.50/mt premium to M1 swaps, down from a $117/mt premium, using information heard in the market in the absence of competitive indications in the Platts Market on Close assessment process. A daily structure of $3.42/mt was applied through the curve.

Gasoline Prem Unleaded 10ppmS CIF Med Cargo <AAWZB00> assessment rationale:

Platts derived the CIF Mediterranean gasoline cargo assessment as a freight net-forward from the FOB Mediterranean gasoline cargo assessment, using the following: FOB Med gasoline cargo assessment plus the cost of transporting a 30,000 mt clean cargo from a basket of Mediterranean ports to a basket of Mediterranean destinations.

Exclusions: None.

Platts is part of S&P Global Energy.

Platts European Naphtha Daily Market Analysis

- High freight costs erode Med-Asia arbitrage
- LR2 vessels switch to dirty trade routes

The European naphtha complex dipped Oct. 14 amid falling cracks and a sharp flattening of prompt backwardation.

Buying interest in Asia is relatively robust, but soaring freight rates are eroding arbitrage economics from the Mediterranean to North Asia.

Meanwhile, the clean freight bull run continues, as over 100 LR2 vessels have turned dirty this year in pursuit of higher returns, market participants said. This has significantly tightened vessel availability on the product side.

"There is demand there [Asia], but freight is just insane," a trading source said, "There [are] barrels around [in the Med], whether you can move them is different."

As a result, trade has been concentrating on the smaller medium-range tankers.

"LRs [are] out of the picture now, too expensive," a second trading source said, "Skikda is getting broken up into MRs."

Meanwhile, the gasoline-naphtha spread has been narrowing sharply over the last few sessions, indicating deteriorating naphtha blending economics.

"Yeah, it has been massive numbers [in blending], but maybe that is a bit of a reset, things are clearing, chems paying big numbers," the first trading source said.

Despite having weakened, players highlighted that the market remains steeply backwardated on the CIF Northwest Europe forward curve, which continues to signal prompt tightness in the naphtha market.

"It's still $30/metric ton backward; it's not weak," a trading source said.

Platts, part of S&P Global Energy, assessed the physical naphtha CIF NWE cargo price at $921/mt, down $10.50 day over day.

Platts assessed front-month CIF Northwest Europe naphtha swap at $879.75/mt, down $4.75.

Platts assessed the October/November time spread at $31/mt, down $8 day over day, while the November/December spread was at $28.50/mt, down $6.

The front-month East-West spread between the CFR Japan naphtha cargo swap and the CIF Northwest Europe equivalent was at $85.25/mt, up $4.25 day over day.

Platts NW Europe Naphtha CIF Cargo Daily Rationale & Exclusions

The CIF NWE naphtha cargo <PAAAL00> was assessed at $921/metric ton based on the following inputs:

The CIF NWE naphtha cargo assessment was based on the relationship between the physical and swap markets in the absence of competitive indications seen in the Platts Market on Close assessment process.

A daily paper structure of $1.29/mt backwardation was applied throughout the rest of the curve.

Platts is part of S&P Global Energy.

Exclusions: None.

Platts Mediterranean Naphtha FOB Cargo Daily Rationale

Naphtha FOB Med Cargo <PAAAI00> assessment rationale:

The FOB Mediterranean naphtha cargo assessment was derived as a freight netback from the CIF NWE naphtha cargo assessment, using the following assessments: CIF NWE naphtha cargo assessment minus the cost of transporting a 27,500 metric ton naphtha cargo from Alexandria in the Mediterranean to Rotterdam.

Platts is part of S&P Global Energy.

Platts European Jet Daily Market Analysis

- Jet differentials mixed on day
- Market remains fundamentally tight
- Arb from Gulf of Oman widens

European jet fuel differentials were mixed Oct. 14, with strong bidding in the Platts Market on Close assessment process reflecting tightness in the cargo market, while a competitive barge offer pressured values lower.

Platts assessed the Jet CIF NWE cargo differential at a premium of $217.75/mt to ICE LSGO M1, up $2.25 day over day. The Platts Jet FOB FARAG barge differential was at a premium of $216.75/mt, down $1.75 day over day.

Market participants have reported a tight market, reflected in strong differentials, which, in turn, are attracting flows from exporting regions.

Jet fuel arbitrage opportunities from the Gulf of Oman to Northwest Europe and the Mediterranean have looked more positive in recent days, amid rising supply availability in Fujairah, while European markets remain tight.

Platts pricing data showed a $321/mt spread between the FOB Fujairah and CIF NWE jet fuel prices Oct. 12, the widest spread since March 6, when it was assessed at $355.80/mt. The calculation uses a conversion factor of 7.89 barrels/metric ton of jet fuel.

The widening spread was evidenced by the recent appearance of offers in the MOC window, indicating that market participants were looking to market Middle Eastern cargoes in Europe.

Gunvor emerged to offer around 27,000 mt of Jet A1 on board the newbuild Athinagoras Oct. 8 and Oct. 12 that loaded offshore Fujairah and at the Duqm Refinery, according to Kpler ship tracking data.

Arbitrage incentives to bring an LR2 tanker from Gulf of Oman to Northwest Europe on Oct. 9 were estimated at 68 cents/b, according to data from S&P Global CERA, while estimates for the Gulf of Oman to Mediterranean were placed at a $7.41/b incentive.

Estimates were last around this level in March, with the arbitrage opening momentarily on the PG-Med route to $7.18/b on March 3 amid high volatility.

The disparity between Northwest Europe and the Mediterranean was due primarily to rising tanker rates, rather than considerable differences in fundamentals within the regions, with Fujairah-Med freight pricing at around a $5/b discount to Northwest Europe.

Weekly Fujairah stock data from late September showed oil product inventories rose to a five-month high on Sept. 21, with middle distillates increasing 23% week over week to 2.6 million barrels, according to the Fujairah Oil Industry Zone published Sept. 23, the highest in six months.

Rising stock levels are the result of normalizing flows through the Strait of Hormuz over the past month, with vessels shuttling product from the Persian Gulf for transfer to vessels off the coast of Oman.

However, traders suggested this could be short-lived as continued attacks have cutoff vessel runs through the Strait of Hormuz.

"Oil is struggling to get through the straits," the source said, adding that vessels that ran from refineries in the Persian Gulf to the Gulf of Oman had recently stopped.

Globally, Northwest Europe was the largest importer of jet fuel in September, taking in 1.02 million mt, Kpler data showed. So far in October, expected imports are second only to imports into North America.

Platts is part of S&P Global Energy.

Platts NWE Jet Barge Daily Rationale & Exclusions

Jet FOB FARAG <PJABA00> assessment rationale:

Platts based the FOB jet fuel barge assessment on the following indications in the Platts MOC process: Platts assessed value on Oct. 21 at $225.75/mt below the a competitive offer. A backwardation of around $3/mt, in line with the paper structure, was applied to the front and back of the curve.

Exclusions: None.

Platts is part of S&P Global Energy.

West Africa Daily Refined Products Commentary

- Ghanian gasoline pricing window revised Oct. 15
- Depot prices in Nigeria heard slightly lower

West African refined products were assessed mostly unchanged on Oct. 14, while news circulated in the market that some fresh Nigerian gasoline import permits were released.

Three West African refined products traders said 150,000 mt of additional gasoline import permits were issued across Q4, ahead of the winter increase in demand.

Traders said Dangote product continued to be on offer at $80/mt premiums to prompt EBOB pricing.

Meanwhile, depot prices in Lagos were heard slightly lower on the day. Gasoline in Lagos is heard offered around 1,350 nairas/liter, while gasoil is on offer at around 1,800 nairas/liter.

In Ghana, the two-week gasoline pricing window will be revised tomorrow, Oct. 15. The window is fixed at the average of the trailing two weeks using the Platts 10 ppm Rotterdam barge price and other associated costs.

Freight from UKC to WAF 37,000 mt clean was assessed at $54.75/mt, unchanged on the day. Cross-WAF clean rates were also unchanged on the day at $19.9/mt.

Platts assessed FOB West Africa gasoline at $1,232/mt, down sharply on the day amid the falling flat price. Gasoline STS Lome was assessed at $1,197/mt, and a $45/mt premium to Balmo swaps.

Meanwhile, the FOB NWE WAF assessment was at $1,112/mt and a $40/mt discount to EBOB balmo.

STS Lome low sulfur diesel was assessed at $1,528.75/mt, $80/mt against ICE LSGO November, while diesel FOB West Africa was assessed at $1,548.75/mt, a $100/mt premium to ICE LSGO October.

Platts European Gasoil Daily Market Analysis

- 50ppm gasoil barge flat price inches higher
- 0.1% CIF NWE gasoil cargoes flat price rises
- Rhine water level falls to about 12 cm at Kaub

In the European gasoil market, the 50 parts per million FOB ARA gasoil barges and the 0.1% CIF NWE gasoil cargoes flat prices were assessed higher Oct. 14 as demand for heating oil begins to pick up.

Platts, part of S&P Global Energy, assessed the 50ppm gasoil FOB ARA barge flat price Oct. 14, $1.50 higher at $1,459.50/metric ton and at $10.75/mt premium to the front-month ICE LSGO futures contract.

In the late afternoon hours of Oct. 14, the Rhine water level fell to about 12 centimeters at the critical chokepoint of Kaub, according to data from Germany's Directorate-General for Waterways and Shipping. Water levels are expected to rise to about 19 cm over the next 24 hours and hover around similar levels in the days that follow, according to the forecast.

Moving on to the 0.1% gasoil cargoes market, Platts assessed the 0.1% CIF Northwest European gasoil cargo flat price $7.25 higher to $1,4233.75/mt day over day, and at $15/mt discount to the front-month ICE LSGO futures contract as demand for product has been picking up slightly.

In the 0.1% NWE gasoil market, market participants have said that demand is gradually picking up for the winter as temperatures have recently cooled.

A Europe-based market participant said, "France is pulling heating oil again. It makes sense given the season." A second source confirmed that demand has been picking up, saying "I think this little cold snap had a bit of impact".

France has remained one of the only Northwest European countries that still allows 1,000 ppm (0.1%) gasoil to be used as heating oil.

Europe's heating oil demand had been slow in the previous weeks heading into this winter, and buyers had been holding back on seasonal stock building as gasoil flat prices have roughly doubled year over year.

For comparison, the 0.1% CIF NWE gasoil cargoes flat price remained above $740.50/mt on Feb. 27, the day before the US-Israel war in Iran started, and above $647.25/mt Oct. 14, 2025.

Platts European Diesel Daily Market Analysis

- Geopolitical tensions keep futures elevated
- Refiners shift focus from diesel to jet fuel

The European diesel complex remained elevated Oct. 14, with bullish factors compounding to support prices.

Platts assessed the front-month low sulfur gasoil futures contract down $1.75/metric ton day over day to

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

$1,488.75/mt, but the contract price remained above the month-to-date average of $1,425.25/mt in a highly volatile market.

Sustained high prices followed ongoing geopolitical tensions in the Middle East. A tanker and a container ship were both attacked by unknown projectiles near the Strait of Hormuz Oct. 13, S&P Global Commodities at Sea said in an Oct. 14 report, citing UK Maritime Trade Operations data.

On fundamentals, refiners may now start to prioritize jet fuel production over diesel, with the jet-diesel regrade firmly in positive territory, which could reduce diesel availability in an already tight pool.

The physical ARA diesel crack spread to Dated Brent was at $67.46/b on Oct. 13, $15.44/b below the jet fuel crack, Platts data showed.

The diesel crack has declined $17.27/b from Aug. 13, when the regrade was at minus $10.67/b.

"I think [European refiners] are going to switch back to jet," said a Mediterranean-based diesel market source.

Market fears persisted despite the rescinding of Russia's diesel export ban.

Russia's Deputy Prime Minister Alexander Novak said Oct. 14 that the country's oil production was set to recover and grow as refineries return from maintenance, while negotiations with the US on energy supply contracts were actively underway.

"The situation is improving. A number of our plants have resumed operations following maintenance, and the situation today is significantly better than it was a month or two weeks ago," Novak said on the sidelines of the Russian Energy week, according to TASS.

He also reiterated that Russia is ready to increase its diesel exports to global markets to as much as 3.5 million mt/month by the end of 2026.

In other news, the International Energy Agency cut its forecasts for global oil demand this year and slashed its estimate for next year's demand recovery, Oct. 14, warning that diesel supplies would remain tight well into next year as the Middle East war continued to hit supplies and fuel pump prices.

World oil demand is now set to decline by an average of 2.6 million barrels/day in 2026 as the impact of the war in the Middle East weighs on markets and demand growth is not expected to return to positive territory until March 2027, the IEA said in its latest monthly Oil Market Report.

Any demand destruction could help to ease the global diesel balance.

Platts is part of S&P Global Energy.

Platts NWE ULSD Barge Daily Rationale & Exclusions

ULSD 10ppmS FOB ARA Barge <AAJUS00> assessment rationale:

Platts based the ULSD FOB ARA barge assessment on the following input, expressed as differentials to the front-month ICE LSGO futures contract:

Platts assessed the value on Oct. 21 at $30.36/mt at the average of a traded bid and a traded offer in the Platts Market on Close.

Platts assessed the value on Oct. 24 at $24.75/mt below a competitive offer in the Platts Market on Close.

A structure was interpolated between the competitive indications and extended to the front of the curve.

A previously established structure of around $1.15/mt in backwardation was applied to the rest of the curve.

Exclusions: None.

Platts is part of S&P Global Energy.

Platts NWE ULSD Cargo Daily Rationales & Exclusions

ULSD 10ppmS CIF NWE Cargo <AAVBG00> assessment rationale:

Platts based the CIF NWE diesel cargo assessment on the previously established relationship between the physical and paper markets in the absence of competitive indications in the Market on Close assessment process.

Exclusions: None.

ULSD 10ppmS CIF NWE Basis UK Cargo <AAVBH00> assessment rationale:

Platts based the CIF UK diesel cargo assessment on the previously established relationship between the physical and paper markets in the absence of competitive indications in the Market on Close assessment process.

Exclusions: None.

ULSD 10ppmS CIF NWE Basis Le Havre Cargo <AAWZC00> assessment rationale: Platts derived the CIF Northwest Europe (Le Havre) diesel cargo assessment as a freight net forward from the CIF NWE (ARA) diesel cargo assessment, using the following assessments: CIF NWE (ARA) diesel cargo assessment plus the cost of transporting a 30,000 mt clean cargo from a basket of ports in Northwest Europe to Le Havre, France.

Exclusions: None.

Platts European Fuel Oil Daily Market Analysis

- Med HSFO market shows balanced conditions
- Elevated freight rates block arbitrage trades
- VLSFO supply-demand remains well balanced

The Mediterranean high sulfur fuel oil market was balanced Oct. 14, while elevated dirty tanker freight rates made arbitrage opportunities challenging.

In the high sulfur fuel oil market, appetite for product diverged across the region.

In the Mediterranean, demand picked up in the west of the region following reports of tightness the week prior, traders said.

Describing the market as balanced, one Med-focused trader added, "I don't see a lack of product — you can easily find product in the West Med."

In Northwest Europe, by contrast, demand remained limited, with market participants citing volatility in Brent futures and RED III premiums as hindering the appetite for bunkers in Rotterdam.

Traders also said arbitrage opportunities into the region from the Americas were uneconomical, owing to elevated freight rates.

In the very low sulfur fuel oil market, supply-demand fundamentals remained well-balanced across the Northwest European and Mediterranean markets.

While the paper market has seen some strength in recent days, market participants put this down to volumes being fixed to both Singapore and the Americas from Europe over the past week.

"There were some arbs," a Northwest European trader source said.

Despite dirty tanker freight rates remaining elevated, participants said some volumes werere shipped on smaller vessels to offset higher Suezmax freight rates. Freight remains a key challenge in keeping this arbitrage window open.

Within the European 1% market, blending demand has been stable, while in the Mediterranean, another market participant described demand as slightly stronger.

Trading activity in the Platts Market on Close assessment process was quiet Oct. 14, with 6,000 metric ton trades observed in the Rotterdam VLSFO barge Platts Market on Close assessment process and 5,000 mt traded for the HSFO equivalent.

There were no trades for fuel oil cargoes.

Platts is part of S&P Global Energy.

Platts FOB Rotterdam 0.5% Marine Fuel Barge Daily Rationale & Exclusions

Marine Fuel 0.5% FOB Rotterdam barge $/mt <PUMFD00> assessment rationale:

Platts assessed the 0.5%S FOB Rotterdam barges based on the following inputs:

Value on Oct. 24 was assessed at $683.25/mt, in line with normalized traded bids for mid-window dates in the Platts Market on Close assessment process;

Value on Oct. 27 was assessed at $676/mt, in line with a traded offer for back-end dates in the MOC.

A daily backwardation of around $2.42/mt was implied between the mid-window and back-end dates and extended to the back of the physical curve.

A daily backwardation of around 80 cents/mt was applied to the mid-window dates and extended to the front of the physical curve in line with the paper structure.

Exclusions: None

Platts is part of S&P Global Energy.

Platts Russian Refined Products Daily Commentary

- Fuel supply improves with refinery restarts: Deputy PM
- Further out, situation depends on attacks: Novak

Several refineries have resumed operations after the situation regarding repairs and fuel supply improved significantly compared with recent weeks, Deputy Prime Minister Alexander Novak told local media.

Novak, however, added that, further out, the situation depended on Ukraine's attacks on Russian refineries, which have stepped up efforts to defend themselves.

Several refineries have restarted in recent days, although some of them are operating only partially, according to domestic market sources.

Nonetheless, availability of gasoline has improved on the exchange floor as demand starts to wind down in line with seasonal patterns.

Diesel supply remained plentiful, according to market sources, as output significantly exceeded domestic consumption.

Refineries and tank farms needed to place their stocks of summer diesel, which is no longer in demand, to free up storage space for intermediate and winter grades, market sources said.

Platts European Feedstocks Daily Commentary

- LSSR supply stays high amid unit maintenance
- VGO loadings jump to 120,900 tons weekly

European low sulfur straight run remained well supplied Oct. 14, despite firming VLSFO providing support, while VGO loadings were higher week over week.

Low sulfur straight run remained well offered across Europe as secondary-unit maintenance reduced appetite for LSSR material.

However, VLSFO cracks had been moving higher over the past week, leading to increased blending demand for LSSR into the cracked very low sulfur fuel oil pool.

In the VGO market, European and Russian loadings rose to 120,900 metric tons in the week to Oct. 9, according to the latest S&P Global Commodities at Sea data. This marks an increase from the week prior, when no volumes were loaded.

Supporting the overall feedstocks complex were diesel cracks, which remained robust at $92.14/b Oct. 13, according to Platts data.

The Platts Market on Close assessment process recorded no bids or offers for feedstocks during the session.

Platts is part of S&P Global Energy.

VGO Deal reported

None.

Platts North Sea Crude Daily Market Analysis

- Differentials weaken as margins soften
- Sweet-sour crude switch possible amid wide spread

Differentials in the North Sea crude oil market came under fresh pressure Oct. 14, tracking a wider softening in Europe and narrowing margins.

North Sea crude oil traders have indicated that differentials may have approached a near-term peak as the elevated cost environment pressures downstream margins.

The EMEA Platts Market on Close assessment process saw cargo offers across the North Sea and Mediterranean markets Oct. 14.

In the North Sea market, TotalEnergies offered an Ekofisk cargo loading over Nov. 6-8 at a premium of $20.30/b over Dated Brent, while Glencore offered a WTI Midland cargo arriving in Rotterdam over Nov. 14-18 at a premium of $22.25/b over Dated Brent.

Both indications reflected weaker values on the day but failed to attract buyers by the London close.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The retreat in crude values comes amid a squeeze on downstream margins following a recent rally in both feedstock and freight prices.

"I feel the current pricing set is starting to impact demand and margins," said one North Sea crude oil trader.

The Platts Forties Northwest Europe Cracking Netback Margin stood at $18.62/b Oct. 13, down 66% from its Sept. 1 peak. Nevertheless, the figure remains above the $12.87/b average seen in October 2025, Platts data showed.

The elevated cost environment has increased buyer hesitancy in the market amid limited clarity on price direction, as in previous cycles. A second North Sea crude trader also suggested that buyers may be waiting for a rebound in downstream product prices.

Refined product inventories remained low in the lead-up to stockpiling season amid weak storage economics, given the underlying backwardation in oil markets.

"[However] reality is coming to check in fast," the second trader said.

Despite the latest sell-side pressure, values of light-sweet crude grades remained elevated relative to their sour counterparts in the North Sea.

First-decade November loading Johan Sverdrup cargoes were again heard trading around a premium of $6/b over Dated Brent during the Oct. 14 session.

On a delivered basis to Rotterdam, two traders have estimated the spread between WTI Midland and Johan Sverdrup to be at least $10/b.

"I reckon [a sweet-sour switch] is going to happen with such wide spreads on prices," another North Sea crude trader said.

Traders have acknowledged the potential for such a switch to occur, noting the cargo movements in the first half of the week.

"Sweet is too pricey versus sours right now," the second trader said.

In upstream news, Equinor and its partners have made an oil and natural gas discovery in the Grimsnes prospect near the Osberg field in the North Sea, the Norwegian energy company said Oct. 14.

Preliminary figures put estimated volumes between 19 million and 50 million barrels of recoverable oil equivalent, Equinor said.

Platts is part of S&P Global Energy.

Platts North Sea Dated Brent, BFOE, CFD Assessment Rationales & Exclusions

Dated Brent <PCAAS00> assessment rationale:

Of the six crudes in the Dated Brent basket, Ekofisk and WTI Midland were seen in the Market on Close assessment process.

Platts assessed Brent Blend unchanged Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting steady market fundamentals, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed Forties unchanged Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting steady market fundamentals, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed Oseberg 50 cents/barrel lower Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting weakness demonstrated by Ekofisk, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed Ekofisk lower in a 4-cent/day backwardated structure Oct. 24 to Nov. 7, using an outstanding offer Nov. 7.

Nov. 7-14 was assessed in a flat structure.

Platts assessed Troll 50 cents/b lower Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, reflecting weakness demonstrated by Ekofisk, and in the absence of indications testing the Oct. 13 assessment.

Platts assessed FOB WTI Midland lower, reflecting a lower CIF Rotterdam assessment and a higher freight adjustment factor.

Platts assessed CIF WTI Midland lower in a 2-cent/day backwardated structure Oct. 26 to Nov. 14, using an outstanding offer Nov. 15-17.

WTI Midland was the most competitive grade Oct. 24 to Nov. 4. Ekofisk was the most competitive Nov. 5-9. WTI Midland was the most competitive grade Nov. 10-14.

BFOE (PCAAQ00-PCAAR00,PCARR00) assessment rationale:

Platts assessed Dec Cash BFOE using a traded bid in the MOC.

Platts assessed Jan Cash BFOE using December/January EFP roll heard during the day.

Platts assessed Feb Cash BFOE using January/February EFP roll heard during the day.

CFD (PCAKA00-AALDA00) assessment rationale:

Platts assessed Oct. 19-23 using a traded offer.

Platts assessed Oct. 26-30 using an outstanding offer.

Platts assessed Nov. 2-6 using an outstanding bid.

Platts assessed Nov. 9-13 using an outstanding offer.

Platts assessed Nov. 16-20 using a narrowed Nov. 9-13 versus Nov. 16-20 CFD roll than heard during the day, as earlier parts of the curve had been proven narrower.

Johan Sverdrup FOB North Sea (AJSVA00, AJSVB00) assessment rationale:

Platts assessed Johan Sverdrup 50 cents/b higher Oct. 24 to Nov. 13, with flat structure rolled over back-end dates, using stronger values heard during the session, and in the absence of indications testing the Oct. 13 assessment.

Exclusions: None.

Platts EMEA Weekly Bitumen Commentary

- European bitumen supply tightens
- Traders disagree on current demand levels
- Mediterranean fuel oil market shows balance

European bitumen availability grew tighter in the week to Oct. 14, as the European winter season approached.

On the supply side, "the European bitumen market is quite tight at the moment," one trader said.

Traders remained sharply split on demand, however. A second trader said demand was present and supported by good weather.

However, a third trader had contrasting views, describing the market as "much smaller than expected" for this time of year.

The market was slowing into the winter season, where weather conditions across the continent are deemed suboptimal for road construction and infrastructure projects, traders said.

Others still identified pockets of support around the continent, where favorable weather was bolstering demand.

In the related high sulfur fuel oil market, appetite for product diverged across the region.

In the Mediterranean, demand picked up in the west of the region following reports of tightness the week prior, traders said.

One Med-focused trader described the market as "balanced," adding that "I don't see a lack of product — you can easily find product in the West Med."

In Northwest Europe, by contrast, demand remained limited, with market participants pointing to volatility in Brent futures and fluctuating ZRE-A ticket prices as the key headwinds in Rotterdam.

Traders also said arbitrage opportunities into the region from the Americas were uneconomical due to elevated freight rates.

Platts EMEA Weekly Base Oil Commentary

- Groups I and II see increased supply
- Small blenders most impacted by high costs

Within the European base oil markets, Groups I and II prices slid in the week ended Oct. 14 amid increased product supply, whilst higher prices caused lubricant blender demand destruction.

Group I product appears well supplied in Europe as local production steadies despite refiners continuing to optimize diesel production. Meanwhile, demand has remained subdued.

"There is more downward pressure" within the Group 1 market, a local trader said.

Italy's Augusta refinery announced a scheduled shutdown running from Sept. 29 through Dec. 15, with affected facilities primarily concentrated in the lubricants section, including vacuum distillation, solvent deasphalting and extraction units.

The maintenance is causing local tightness within Italy, the same source said. However, this dynamic is not seen across the wider Mediterranean basin.

Platts assessed Group 1 SN150 at $1,835/metric ton and SN500 at $1,965/mt, both down $30/mt. Bright Stock moved $20/mt lower to $2,480/mt.

Within the Group II market, European demand was slightly better. However, participants note ample availability of product across the region.

"There are loads of Group II available," a second trader said.

Participants note that major base oil producers are all selling product, which, combined with higher freight costs, has limited the arbitrage window into Europe.

A third source said, "We are offering lower and don't get rid of the product."

Platts assessed Group II 150N and 220N at $2090/mt with 600N at $2200/mt, all down $30/mt week over week.

Within the Group III market, limited availability has continued to constrain trading activity, with few volumes being sold into Europe, participants noted.

While higher prices have led to some demand destruction, this appears to have mainly impacted price-sensitive, smaller lubricant blenders.

"There has been some demand destruction due to the extremely high prices for small and medium blenders," the second trader said, adding that majors and larger blenders are still buying Group III product at these elevated levels.

Group III assessed prices remained unchanged week over week.

Platts to launch ewindow instruments for Singapore gasoil swaps 16.30 London Nov. 2

Effective Nov. 2, Platts, part of S&P Global Energy, will launch a number of eWindow instruments to facilitate the publication of bids, offers and interest to trade for FOB Singapore 10 parts per million gasoil swaps 16.30 London.

The addition of the new eWindow instruments follows the launch on May 5 of gasoil EFS and Singapore gasoil swaps assessments at 4:30 pm London time.

Participants in the Platts Market on Close assessment process will be able to submit bids, offers and interest to trade for publication directly through the eWindow software or through an editor, who would then publish bids and offers using the software.

The new instruments will automatically appear under the product names Platts GO (balmo) (London MOC), Platts GO (London MOC) and Platts GO Spr (London MOC). They will be automatically added to the reviewed market participants' existing portfolio where there is Platts Gasoil Diff ULSD 10ppm CIF NWE Cg/LSGO Dec26 on the day of launch. Bids, offers and trades for FOB Singapore 10ppm gasoil swaps 16.30 London derivatives will be published through the eWindow software for Balance Month, Month 1, Month 2 , Month 3, Month 4, Month 5, Month 6, Month 7, Month 8, Month 9, Month 10 and Month 11 contracts, along with their associated time spreads.

MOC TIMING: the cutoff time to enter bids and offers for outright swaps is 4:20:00 pm London time and the cutoff time to enter bids and offers for time spreads is 4:15:00 pm London time.

INCREMENTABILITY: The price for bids and offers for FOB Singapore 10ppm gasoil 16.30 London derivatives (outright and time spreads) may be improved by a maximum of 20 cents/barrel every 20 seconds.

REPEATABILITY: Market participants will have 30 seconds to repeat a bid or offer, following a trade.

EXTENSION: An extension of one minute will be triggered by any price changes or a rebid or reoffer in the last 20 seconds before the close at 4:30:00 pm London time.

Further information on Platts timings and increments guidelines can be found here.

Please send any comments or feedback to **Europe_Products@spglobal.com** and **pricegroup@spglobal.com.** For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts launches transitional NWE 0.1% gasoil freight netforward assessments Oct. 1

Platts, part of S&P Global Energy, has launched a suite of transitional assessments and related spreads for NWE 0.1% gasoil freight netforward from Oct. 1, 2026, based on the new net-forward methodology that will be applied to the existing CIF NWE 0.1% gasoil cargo benchmark price assessments from Jan. 4, 2027. The transitional assessments and related spreads will be published through to Dec. 31, 2026, to provide participants with an extended period of transitional reference data supporting the methodology changes to benchmark CIF NWE 0.1% gasoil cargo coming into

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

effect from January 2027.

This follows a decision published Sept. 4 and available here.

The transitional freight netforward assessment represents a freight net-forward from the existing Gasoil 0.1%S (1,000 ppm) FOB ARA Barge assessment (AAYWT00) and is derived using the relevant daily freight rates published in Platts Clean Tankerwire for UKC-UKC 22,000 mt cargoes (PFALY00). The freight component is calculated as the incremental freight differential between two baskets of freight routes: an ARA basket covering Brofjorden to Amsterdam-Rotterdam-Antwerp and Antwerp to Amsterdam and Rotterdam; and a Le Havre basket covering Brofjorden/Antwerp to Le Havre.

In addition, Platts is publishing through this transitional period the differential between the freight netforward from FOB 0.1% gasoil barges and the CIF NWE 0.1% gasoil cargoes (AAYWS00).

The new assessments appear in Platts price database under the following codes:

Assessment	Symbol
Freight netforward from FOB 0.1% gasoil barges	AAYGN00
Freight netforward from FOB 0.1% gasoil barges (monthly average)	AAYGN03
Spread between freight netforward and CIF NWE 0.1% gasoil cargoes	AAZGN00
Spread between freight netforward and CIF NWE 0.1% gasoil cargoes (monthly average)	AAZGN03

Please send any comments or feedback to europe_products@spglobal.com and pricegroup@spglobal.com. For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Chevron Products UK Limited to join EMEA Jet Fuel Barges-Physical MOC

Chevron Products UK Limited has advised Platts, part of S&P Global Energy, that it would like to participate in the Platts Market on Close (MOC) assessment process for EMEA Jet Fuel Barges-Physical.

Platts has reviewed Chevron Products UK Limited and will consider information from the entity in the assessment process for EMEA Jet Fuel Barges-Physical, subject at all times to adherence with Platts editorial standards.

Platts will publish all relevant information from Chevron Products UK Limited accordingly.

Platts welcomes all relevant feedback regarding MOC participation. Platts considers bids, offers and transactions by all credible and credit-worthy parties in its assessment processes. For comments and feedback, please contact Platts editors at pl_middisteurope@spglobal.com and market_integrity_review@spglobal.com.

Platts removes UK delivery ports from the SAF CIF NWE assessments Sept. 28

Platts, part of S&P Global Energy, has excluded UK Ports from the Northwest Europe delivery basis for its Sustainable Aviation Fuel (HEFA-SPK) CIF NWE cargo price assessments, effective Sept. 28, 2026.

The change follows research and market feedback indicating an intrinsic value difference between SAF volumes in the UK market and mainland Europe. This divergence in value stems from differences in regulatory frameworks. The UK's SAF policy incentivizes lower carbon-intensity aviation fuel. In contrast , the ReFuelEU volumetric mandate structure does not incentivize higher greenhouse gas savings. Platts seeks to include only markets where product values are formed under sufficiently comparable regulatory, commercial and demand conditions.

The Platts SAF CIF NWE assessments continue to reflect cargoes of HEFA-SPK delivered to the Amsterdam-Rotterdam-Antwerp hub, as well as northern France.

Platts published a notification of this methodology change on Aug. 28, following a proposal, published on July 17.

The change affects the Platts SAF (HEFA-SPK) CIF NWE $/mt (AJNWD00) and Platts SAF (HEFA-SPK) CIF NWE Premium $/mt (AJNWF00) assessments, as well as associated currency and unit conversions.

These assessments appear in Biofuelscan, Aviation Weekly, Oilgram, Carbon Market Daily, Marketscan and the Platts price database under the codes above.

Please submit any feedback, comments, or questions to platts_biofuels@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

VAROPreem AG to join EMEA Gasoil/Diesel - Paper MOC

VAROPreem AG has advised Platts, part of S&P Global Energy, that it would like to participate in the Platts Market on Close assessment process for EMEA Gasoil/Diesel — Paper.

Platts has reviewed VAROPreem AG and will consider information from the entity in the assessment process for EMEA Gasoil/Diesel — Paper, subject at all times to adherence with Platts editorial standards.

Platts will publish all relevant information from VAROPreem AG accordingly.

Platts welcomes all relevant feedback regarding MOC participation. Platts considers bids, offers and transactions by all credible and credit-worthy parties in its assessment processes.

For comments and feedback, please contact Platts editors at pl_middisteurope@spglobal.com and market_integrity_review@spglobal.com.

Platts to launch transitional NWE 0.1% gasoil freight netforward assessments Oct. 1

Platts, part of S&P Global Energy, will start publishing a suite of transitional assessments and

© 2026 by S&P Global Inc. All rights reserved.

related spreads for NWE 0.1% gasoil freight netforward from Oct. 1, 2026, based on the new netforward methodology that will be applied to the existing CIF NWE 0.1% gasoil cargo benchmark price assessments from Jan. 4, 2027. The transitional assessments and related spreads will be published through to Dec. 31, 2026, to provide participants with an extended period of transitional reference data supporting the methodology changes to benchmark CIF NWE 0.1% gasoil cargo coming into effect from January 2027.

This follows a decision published Sept. 4 and available here.

The transitional freight netforward assessment will represent a freight netforward from the existing Gasoil 0.1%S (1,000 ppm) FOB ARA Barge assessment (AAYWT00) and will be derived using the relevant daily freight rates published in Platts Clean Tankerwire for UKC-UKC 22,000 mt cargoes (PFALY00). The freight component will be calculated as the incremental freight differential between two baskets of freight routes: an ARA basket covering Brofjorden to Amsterdam-Rotterdam-Antwerp and Antwerp to Amsterdam and Rotterdam; and a Le Havre basket covering Brofjorden/Antwerp to Le Havre.

In addition, Platts will publish through this transitional period the differential between the freight netforward from FOB 0.1% gasoil barges and the CIF NWE 0.1% gasoil cargoes (AAYWS00).

The new assessments will appear in Platts price database under the following codes:

Assessment	Symbol
Freight netforward from FOB 0.1% gasoil barges	AAYGN00
Freight netforward from FOB 0.1% gasoil barges (monthly average)	AAYGN03
Spread between freight netforward and CIF NWE 0.1% gasoil cargoes	AAZGN00
Spread between freight netforward and CIF NWE 0.1% gasoil cargoes (monthly average)	AAZGN03

Please send any comments or feedback to europe_products@spglobal.com and pricegroup@spglobal.com. For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts to amend Gasoil 0.1% CIF NWE assessment methodology effective Jan. 4, 2027

Platts, part of S&P Global Energy, will amend the methodology for its Gasoil 0.1% CIF NWE Cargo assessment (AAYWS00) and the related freight netback Gasoil 0.1%S FOB NWE Cargo assessment (AAYWR00), effective Jan. 4, 2027.

Gasoil 0.1% CIF NWE to be assessed as freight net-forward

Effective Jan. 4, 2027, Platts will assess Gasoil 0.1% CIF NWE Cargo (AAYWS00) as a freight net-forward from the existing Gasoil 0.1%S (1,000 ppm) FOB ARA Barge assessment (AAYWT00), which reflects German DIN specification heating oil. More details of the underlying methodology of FOB ARA Gasoil Barges can be found at in the Specifications Guide, Europe And Africa Refined Oil Products, available here.

The assessment will be derived using the relevant daily freight rates published in Platts Clean Tankerwire for UKC-UKC 22,000 mt cargoes (PFALY00). The freight component will be calculated as the incremental freight differential between two baskets of freight routes: an ARA basket covering Brofjorden to Amsterdam-Rotterdam-Antwerp and Antwerp to Amsterdam and Rotterdam; and a Le Havre basket covering Brofjorden/Antwerp to Le Havre.

Gasoil 0.1% Cargoes FOB NWE

The Gasoil 0.1% FOB NWE Cargo assessment (AAYWR00) will continue to be calculated as a freight netback from the Gasoil 0.1% CIF NWE assessment (AAYWS00). The netback will be based on a basket of routes from Brofjorden and Antwerp to Le Havre, using the relevant daily freight rates published in Platts Clean Tankerwire for UKC-UKC 22,000 mt cargoes (PFALY00).

Comparison of upcoming versus current methodology

For comparison, the corresponding Worldscale incremental flat rate used in the proposed net-forward formula would have been $1.327/mt in 2025. Gasoil 0.1% CIF NWE Cargo averaged $677.86/mt in 2025 and $742.36/mt in 2024 under the current methodology. Using the new methodology coming into effect at the start of next year, the equivalent average assessment would have been $662.51/mt in 2025 and $730.47/mt in 2024. As of Aug. 10, the average from Jan. 2, 2026, under the current methodology is calculated to $1,003.88/mt. Using the new methodology during the same period, it would calculate to $978.75/mt.

Additional interim assessments

On an interim basis from Oct. 1, 2026, until Dec. 31, 2026, Platts will publish assessments of Gasoil 0.1% CIF NWE Cargo and Gasoil 0.1% FOB NWE Cargo, based on the methodology that will be applied to the existing benchmark price assessments once the change is implemented. These interim assessments will be published under dedicated codes and will allow the market to gauge the difference in value between the spot-market based assessments and the upcoming freight net-forward methodology.

Platts welcomes further feedback from the market on aspects related to amendments of contracts that will settle against Gasoil 0.1% CIF NWE Cargo (AAYWS00) and Gasoil 0.1%S FOB NWE Cargo assessment (AAYWR00) from Jan. 4, 2027, onwards.

Rationale for the change

Platts understands that French legislation will reduce the maximum sulfur content for heating oil imported into France from March 1, 2027, from the current 1,000 ppm limit. In light of this regulatory change, Platts has consulted and sought market feedback on the proposed change to ensure the assessment remains representative of the high sulfur gasoil complex in Northwest Europe, along with the broader methodology parameters underpinning the assessment.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The decision follows a proposal published on July 7, 2026, and a prior consultation subscriber note which was published on March 16. The proposal subscriber note is available here and the prior consultation note can be reached here.

Feedback and Comments

Please send any comments or feedback to **europe_products@spglobal.com** and **pricegroup@spglobal.com.** For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts has introduced operational tolerance dynamic pricing eWindow functionality for CIF European ULSD/gasoil cargoes

Platts, part of S&P Global Energy, has introduced new operational tolerance dynamic pricing functionality on its eWindow communication tool for the Platts Market on Close assessment process for CIF Northwest European 10 ppm diesel and 0.1% gasoil cargoes, as well as CIF Mediterranean 10 ppm diesel and 0.1% gasoil cargoes, effective June 29.

With this addition, participants in the MOC process are able to select the operational tolerance pricing basis and change the corresponding pricing differential when submitting and controlling bids and offers for CIF European diesel/gasoil cargoes for publication directly through the eWindow communication tool, or do so through an editor who will then publish the bids and offers using the software.

In line with existing methodology, Platts reflects bids, offers and trades that limit a counterparty's price exposure to operational tolerance. Operational tolerance in CIF cargo markets is typically limited to plus or minus 10% of the transacted size for cargoes.

When pricing on a floating basis, Platts reflects CIF cargoes where the operational tolerance prices after the completion of discharge (COD).

Platts wishes to clarify to subscribers that main volume pricing and operational tolerance pricing are expected to be within a reasonable range, while accounting for market structure, in order to be reflected in the Platts CIF European distillate cargo MOC. Platts may review for publication instances where the two pricing elements are deemed to diverge significantly.

Platts has established clearly defined guidelines and standards of price incrementability which apply when publishing bids and offers in the MOC process in order to ensure an orderly and transparent price assessment process.

For further details of these guidelines, please see: https://www.spglobal.com/platts/en/our-methodology/methodology-specifications/oil/oil-timing-and-increment-guidelines

Please send any feedback, questions or comments to europe_products@spglobal.com and pricegroup@spglobal.com.For written comments, please provide a clear indication if comments are not intended for publication for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts to update European fuel oil and feedstocks 2026 netback formulas

Platts, part of S&P Global Energy, will update the formulas to derive its netback and net forward assessments to reflect 2026 Worldscale rates.

The changes to the formulas are effective Jan. 2, 2026, for the following assessments:

High sulfur fuel oil

The flat rate used to calculate FOB NWE HSFO cargoes (PUABB00) as a freight netback from CIF NWE HSFO cargoes (basis Rotterdam) will be $6.74/metric ton.

The flat rate used to calculate FOB Mediterranean HSFO cargoes (PUAAZ00) as a freight netback from CIF Mediterranean HSFO cargoes will be $8.32/mt.

The Rotterdam harbor dues are $1.15/mt.

Low sulfur fuel oil

The flat rate used to calculate CIF NWE LSFO cargoes (PUAAL00) as a freight net-forward from FOB NWE LSFO cargoes will be $7.74/mt.

The flat rate used to calculate CIF Mediterranean LSFO cargoes (PUAAJ00) as a freight net forward from FOB NWE LSFO cargoes, in the absence of other daily bid, offer and trade information, will be $15.17/mt.

The flat rate used to calculate FOB Mediterranean LSFO cargoes (PUAAK00) as a freight netback from CIF Mediterranean LSFO cargoes will be $8.53/mt.

Marine fuel

The flat rate used to calculate FOB Mediterranean Marine Fuel 0.5% cargoes (MFFMM00) as a freight netback from CIF Mediterranean Marine Fuel 0.5% cargoes will be $7.41/mt.

Fuel oil feedstocks

The flat rate used to calculate FOB NWE VGO cargoes (AAHMX00 and AAHNB00) as a freight netback from CIF NWE VGO cargoes will be $5.13/mt.

Please note that spot market bids, offers and trades may, where relevant, also be taken into account when assessing FOB NWE VGO cargoes.

The flat rate used to calculate FOB Mediterranean VGO cargoes (ABBAD00 and ABBAC00) as a freight netback from CIF Mediterranean cargoes will be $5.20/mt.

The Rotterdam harbor dues are $1.15/mt.

Platts to update 2026 European Jet, ULSD and Gasoil netback and net-forward assessment formulae effective Jan. 2, 2026

Platts, part of S&P Global Energy, will update the formulae to derive its netback and net-forward assessments to reflect updated Worldscale freight rates for 2026.

The updates are effective Jan. 2, 2026, across the following Platts price assessments for the Europe and Africa region.

Effective Jan. 2, 2026, the following formulae apply:

Diesel:

Assessment Name 2026 netback/net-forward formula

ULSD 10ppmS FOB NWE Cargo(AAVBF00) $5.86/mt

ULSD 10ppmS FOB NWE Basis Le Havre Cargo (AAWZD00) $7.16/mt

ULSD 10ppmS CIF NWE Basis Le Havre cargoes (AAWZC00) $1.23/mt

ULSD 10ppmS FOB Med Cargo (AAWYY00) $8.36/mt

Gasoil:

Assessment Name 2026 netback/net-forward formula

Gasoil 0.1%S FOB NWE Cargo (AAYWR00) $8.40/mt

Gasoil 0.1%S FOB Med Cargo (AAVJI00) $7.93/mt

Jet Fuel:

Assessment Name 2026 netback/net-forward formula

Jet FOB Med Cargo (AAIDL00) 2026 WS rate for Augusta-Rotterdam, inclusive of Rotterdam port fees

Please send any questions or comments to **Europe_products@spglobal.com** with a CC to **pricegroup@spglobal.com**

Worldscale rates for 2026 Russian oil product netbacks to be updated

Effective Jan. 2, 2026, Platts, part of S&P Global Energy, will update the Worldscale flat rates per metric ton for the following routes for Russian oil products netbacks: Novorossiisk-Genoa, Vysotsk-Rotterdam, St. Petersburg-Rotterdam and Primorsk-Rotterdam.

For more information on the above flat rates, please see the Worldscale website.

Please send any comments or questions to europe_products@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches FOB Rotterdam 0.1%S ultra low sulfur fuel oil barge assessment Dec 1, 2025

Platts, part of S&P Global Energy, has launched a daily assessment for FOB Rotterdam 0.1%S ultra-low sulfur fuel oil (ULSFO) barges Dec. 1, 2025.

This follows an increase in demand for the fuel in Europe following the implementation of the Mediterranean Emissions Control Area from May 1, 2025.

Specifications: The assessment reflects RMG 380 specifications as per ISO 8217: 2017 Petroleum products — Fuels (class F) on all parameters, with the addition of a minimum viscosity of 30 CST, in line with market feedback.

Size: The assessment reflects a barge size of 1,000 mt, with an operational tolerance of plus/minus 5%. Platts also publishes indications between 1,000 mt and 5,000 mt inclusive. Indications higher than 1,000 mt may be subject to normalization.

Port basis & assessment period: The assessment reflects the value of barges loading FOB basis Rotterdam-Antwerp, for loading 3-15 (Monday to Tuesday) or 5-15 (Wednesday through Friday) days forward, with value normalized to reflect the mean value of these loading ranges. Platts understands that barges typically trade for the front five days, middle five days or the back five days.

Product Origin: In line with all European fuel oil assessments, the FOB Rotterdam ULSFO barge assessments reflects non-Russian origin.

Assessment: The assessment is assessed as a flat price, in line with Platts' existing 3.5% and 0.5% Rdam barge assessments.

Nomination: A seller can nominate any reasonable terminal in the Amsterdam-Rotterdam-Antwerp region for a FOB Rotterdam-Antwerp barge trade reported in the Market on Close assessment process, and the buyer should not unreasonably refuse this option. The seller should compensate the buyer for the demonstrable incremental freight cost associated with loading in an alternative port to Rotterdam-Antwerp. For FOB North West Europe barges across all products, the buyer must give the seller 48 clear working hours' notice of the date of loading required. The nomination procedure expectations are in line with Platts' 0.5% Rdam barge assessment expectations, as stated in the Europe and Africa Refined Oil Products Methodology guide, found here: **https://www.spglobal.com/content/dam/spglobal/ci/en/documents/platts/en/our-methodology/methodology-specifications/refined-products/refined-products-europe-africa-specifications.pdf**

Platts will launch eWindow instruments for this assessment on Dec. 15.

The FOB Rotterdam Marine Fuel 0.1% Barge assessment will be published to code FBEBR00, and on fixed pages PGA0030/PRF0030, PGA1112/PRF1112, PGA1510/PRF1510 and in European Marketscan.

Platts first proposed to launch this assessment on Oct. 10 in a subscriber note and published its decision to launch the assessment in a subscriber note on Oct. 31.

Please send any comments, feedback and questions to **Europe_products@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts to change CIF Mediterranean Marine Fuel 0.5% Cargo basis port to Algeciras, Jan 2

Platts, part of S&P Global Commodity Insights, will change the basis port of the CIF Mediterranean Marine Fuel 0.5% Cargo assessment (MFCMM00) from Genoa to Algeciras, effective Jan. 2, 2026.

This follows a proposal published on Aug. 22, 2025 , available here: Platts proposes to change CIF Mediterranean Marine Fuel 0.5% Cargo basis port to Algeciras, Jan 2 | S&P Global.

Following market feedback and an observed change in product flows, including in relation to the recent IMO designation of the Mediterranean as an ECA zone since May 1, 2025, Platts understands that Algeciras is the most prevalent discharge location of 0.5%S marine fuel in the region. As such, Platts will reflect this market shift by changing the basis port of its CIF Mediterranean Marine Fuel 0.5% cargo assessment.

In addition, Platts will amend the basket of ports used to calculate the FOB Mediterranean Marine Fuel 0.5% Cargo netback assessment, to reflect the following routes & weightings:

Load port	Discharge port	Weighting
Lavera	Algeciras	35%
Tarragona	Algeciras	25%
Genoa	Algeciras	20%
Sarroch	Algeciras	10%
Eleusis	Algeciras	10%

Currently, the FOB Mediterranean Marine Fuel 0.5% Cargo assessment is based on the following basket of routes, with equal weightings:

Load Port	Discharge Port
Sines	Malta
Haifa	Algeciras
Algeciras	Genoa
Sarroch	Malta
Fos	Barcelona

The current netback flat rate for 2025 is $6.94/mt. Based on 2025 Worldscale rates, the new basket flat rate would be $6.96/mt.

Effective Jan. 2, 2026, the FOB Mediterranean Marine Fuel 0.5% Cargo market will continue to be assessed using a freight differential to the CIF Mediterranean assessment, based on the new weighted basket outlined above, multiplied by the daily Worldscale assessment for the 30,000 mt Cross-Mediterranean route assessed in Platts Dirty Tankerwire .

The assessment is published in Platts European, Asia Pacific and US Marketscans in the tables entitled “Marine Fuel,” and on Platts Global Alert and Platts Refined Products alert pages 30 and 1114.

Please send any feedback, questions or comments to **europe_products@spglobal.com** and **pricegroup@spglobal.com** .

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.
