### OIL FUTURES: US diesel cracks surge as market discounts Russia supply impact

- NYMEX diesel crack spreads climb over 8%
- Russian imports unlikely to impact US prices: analysts
- Vessel traffic drops amid Hormuz attacks

US diesel cracks moved sharply higher Oct. 13 as analysts discounted the market impact of a US plan to import more Russian diesel fuel.

NYMEX November ULSD climbed 21.12 cents/gallon to settle at $4.9344/gal Oct. 13, pushing the front crack versus NYMEX WTI up over 8% to $113.10/barrel at market settle.

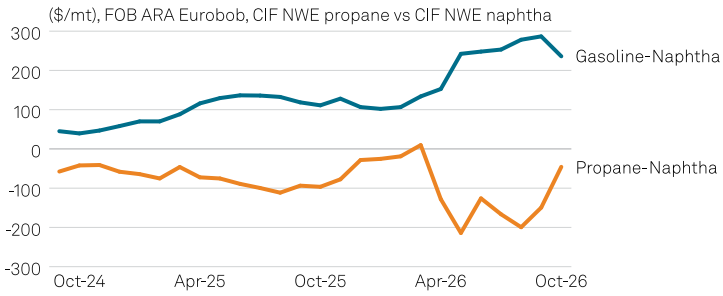

"Strength across crude oil, and products such as diesel in particular, are becoming extremely hard to shake with headlines and deal talks," TD Securities analyst Ryan McKay and Bart Melek said in an Oct. 13 note. "The diesel market is holding strength despite touted Russian supply deals as the volumes are still well below normal and the market remains skeptical about the ability of Russia to deliver."

US authorization to import Russian diesel is unlikely to have a material impact on diesel prices in the near term because Russia has little capacity to boost exports, and the US license could also face legal hurdles, energy analysts say.

"The amount of diesel Russia can provide would be a drop in the bucket compared to global demand," said Masha Kotkin, a fellow at the Center for Strategic and International Studies. "If you are asking about US diesel prices, I don't think it's going to make a difference. It is not very much in the scheme of things."

International Crude

### CHINA DATA: Independent refiners face Iranian crude shortage as Sept imports hit four-year low

- Iranian crude imports drop 57% in September
- Supply shortage forces refineries to cut
- Alternative barrels cost $25/b above Brent

Imports of Iranian crude by China's independent refineries hit a four-year low in September, and are likely to trend lower in October due to the ongoing US blockade of the Strait of Hormuz, refinery and trade sources told Platts, part of S&P Global Energy, on Oct. 13.

Iranian crude deliveries slumped 57.3% month over month to about 2.2 million metric tons (537,000 barrels/day) in September, the lowest since January 2022, when deliveries were 2.18 million mt, according to Platts data.

As a result, the sector's Iranian crude imports in the first nine months of 2026 fell 16.5% year over year to 46.9 million mt, the data showed.

"It's hard to predict how much Iranian crude will arrive in October, especially since most carriers switch off their AIS when passing through the Strait of Hormuz," a Shandong-based analyst said. "I expect the volume to be just over 1 million mt."

The sharp drop in Iranian crude availability has become the dominant concern for China's independent refining sector.

Market sources said Iranian crude cargoes, which typically move to China from floating storage near Malaysian waters, have become increasingly scarce as a result of the Middle East conflict.

#### High prices

The tighter supply picture has driven Iranian Light offers to about $25/b above ICE Brent on a DES Shandong basis, putting the grade close to the premium commanded by Russia's ESPO crude.

Other alternative barrels remain equally expensive. Brazilian Buzios crude was recently offered at premiums of around $25-$27/b to ICE Brent on a DES Shandong basis, amid longer voyage times and elevated freight costs, traders and refiners said.

"Some of those refineries that used to buy Iranian crudes have switched to Basrah barrels, but that is far from sufficient, so some refineries will have to further cut utilization rates," a trader said.

Since late September, small independent refineries have secured about 7 million barrels of Middle Eastern crude, while private mega-refineries have purchased another 4 million barrels, according to trade sources.

The volume was slightly below the 867,000 b/d (3.55 million mt) of total imports by the whole independent sector from the Middle East, excluding Iranian barrels, Platts data showed.

Iraqi Basrah Medium crude for November delivery was traded at premiums of about $17-$18/b to ICE Brent futures on a delivered Shandong basis, while Basrah Heavy changed hands at about $12/b above ICE Brent, two Shandong-based refinery sources said. These cargoes were bought by about eight independent refineries.

"There were no other cheap feedstock choices for independent refineries besides those Middle Eastern crudes, as Iranian crude supplies are apparently diminishing," a trade source in Qingdao said.

**Runs cut despite improving margins**

Refiners, traders and analysts said high feedstock costs, along with improving exports and increased deliveries from the Middle East, have led to cautious feedstock procurement to avoid a sudden slump in oil prices, despite stronger refining margins.

Most refineries have been operating at reduced levels since mid-September and will likely cut rates further late this month due to the limited feedstock, sources said.

According to local energy information provider JLC, average refining margins for processing imported crude rose to 694 yuan/mt as of Sept. 30 from 410 yuan/mt a month earlier.

"The refining margins were still quite good recently, so there is no need for them to shut down at the moment," another analyst in Shandong said.

However, persistent feedstock shortages could trigger additional shutdowns next month as refiners struggle to secure replacement barrels, the analyst said.

## Iraqi crude pipeline flows to Mediterranean jump, push prices to four-week lows

- Iraq-Turkey pumping rate jumps to about 400,000 b/d
- Extra supply puts more pressure on Med sour grades
- Kirkuk's API gravity drops: sources

Exports of Iraqi crude through the Turkish port of Ceyhan have ramped up in the first week of October, with about 400,000 barrels/day flowing through the Iraq-Turkey pipeline, adding barrels to an already well-supplied sour market in the Mediterranean and pushing prices lower, industry sources and analysts said.

Platts, part of S&P Global Energy, assessed Kirkuk FOB Ceyhan at a 15 cents/b discount to Dated Brent Oct. 12 – a level last seen Sept. 17, while the price of Basrah Medium delivered to the Mediterranean was last heard at about flat to the November average of Dated Brent, down $5/b over two weeks.

"Offers on Kirkuk are coming off and cargoes still there," one Mediterranean trader said. "Part of the impact is down to expensive freight and steep Brent structure, but I also don't see anyone desperate for sour grades."

Three Mediterranean crude oil sources said the pumping rate of the Iraq-Turkey pipeline rose to about 400,000 b/d and that translated into higher loadings at Ceyhan. An analyst said the rate was closer to 450,000 b/d.

Loadings from Ceyhan had been roughly 247,000 b/d in September and 137,000 b/d in August, S&P Global Commodity At Sea data show, but that rate has increased substantially in October. In the first 11 days of October, the export rate from Ceyhan hovered just above 500,000 b/d, according to preliminary CAS data.

A higher volume of Basrah Heavy and Basrah Medium, produced in southern Iraq, was trucked north, Iraq's oil ministry spokesperson Saleem al-Rikabi told Platts, part of S&P Global Energy Oct. 13, contributing to the larger export volume. Around 300,000 b/d of crude are being trucked north, al-Rikabi said, supplying figures from Iraq's state oil marketer SOMO.

He said there are plans to increase those volumes in the near future, without specifying the amount.

In August, Iraq's oil minister announced a plan to export 750,000 b/d to Ceyhan that would partially rely on trucking crude, with local media reporting that 450,000 b/d would be exported via the Iraq-Turkey pipeline and 300,000 b/d by truck from Iraq's southern fields to the north. Iraq, which relies on the Strait of Hormuz as its main oil export route, has been heavily affected by restricted movement through the waterway and is working to redirect crude exports via other outlets.

**Varying quality**

"We have seen more crude come to the market recently and it is keeping the sour complex well-supplied," another Mediterranean source said. "US SPR sour release could further pressure prices because the Mediterranean has enough sour supply and doesn't need those US cargoes."

While there is more Iraqi oil flowing through the pipeline, the quality of product can vary.

"We typically see Kirkuk with an API between 26 and 30, and what we've seen recently has been around 27/28 API which is in line with historical trends," a Mediterranean source with primary knowledge said.

Two sources close to SOMO said the API has dropped about 2 degrees.

SOMO did not respond to Platts' inquiries about the current quality of Iraqi crude exports via Ceyhan, which have been variable in recent years.

**Changing crude blend**

Production of Kirkuk crude is currently about 320,000 b/d, sources said.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

"Kirkuk crude has been primarily used for domestic consumption in nearby refineries, and some volumes are still used in those refineries," an Iraq-based source said.

Three analysts and the sources close to SOMO said that Iraqi crude produced in Basrah is being trucked north, put into the Iraq-Turkey pipeline at the Khormala pumping station and being exported to Ceyhan.

Two sources said that Basrah Medium, with an API of 29, is flowing through the pipeline, at around 150,000 b/d-170,000 b/d. Kirkuk crude comprises 50,000-80,000 b/d of what is exported, and Kurdish crude adds 150,000-170,000 b/d, one source with direct knowledge of the matter said.

The Iraq-Turkey pipeline had long been inactive, but exports of Kurdish crude via the Iraq-Turkey pipeline to Ceyhan resumed in September 2025 after a political deal made the pipeline operational again. But security incidents in March 2026 forced international oil companies operating in Iraqi Kurdistan that produce Kurdish crude to halt operations.

Local companies producing Kurdish crude have continued to export crude, and the federally-controlled Kirkuk crude grade has been exported in higher volumes, with Basrah grades playing a larger role in northern refinery operations.

Crude delivered at Ceyhan has seen its quality shift multiple times this year. In February, before security incidents shuttered Western-operated oil fields, Platts reported that the API had grown heavier following a switch from Kirkuk crude flowing in the pipeline, to Kurdish crude.

## MCX crude oil futures traded volume slips 19.08% MOM in August

- Traded volume at 1.47 mil lots in Aug
- Indian crude imports drop 11% MOM

Crude oil futures volume traded on India's Multi Commodity Exchange, or MCX, fell 19.08% month over month to 1.473 million lots in August, exchange data showed Oct. 13, as Indian refineries were seen importing less crude oil over the month.

The MCX crude oil futures contract is a cash settlement contract, priced and traded in Indian rupees, having first been listed Oct. 11, 2005. One lot is equivalent to 100 barrels.

The MCX crude oil futures contract is settled based on NYMEX WTI crude oil prices and incorporates crudes of mostly light, sweet quality, with sulfur content of below 0.42% and API gravity that ranges between 37 and 42 degrees.

The total cumulative open interest across the futures contracts on Aug. 31 stood at 12,360 lots, rebounding 3.67% from the open interest July 31, when the contracts closed the month at 11,922 lots.

Indian refineries were also seen procuring an increasingly diverse range of crude grades, while adapting to changing trade flows by reducing their reliance on traditional Gulf term supplies and sourcing more barrels from the US, Latin America, Venezuela, Brazil, West Africa, and Russia, strengthening their flexibility and leverage in the global crude market.

In August, Indian crude imports fell to 4.47 million b/d in

August, down 3% year over year and 11% month over month, amid lower Russian flows and increased Iraqi supplies

Indian refiners imported 4.8 million b/d over April-August, down 0.4% from a year earlier, according to the report, reflecting the impact of higher crude prices amid renewed geopolitical tensions in the Middle East.

Meanwhile, Indian refineries processed 5.47 million barrels/day in August, according to the oil ministry's provisional estimates released late Sept. 25, reflecting a 3.6% increase in processing from a year earlier, even as imports by the world's third-largest buyer fell on higher prices due to supply concerns arising from the Middle East conflict.

**Front-month MCX futures**

The total traded volume for the August MCX futures — which traded as the front-month contract from July 21 to Aug. 19 — stood at 1.765 million lots during that period, up 87.78% from the July MCX contract, which had amounted to 939,784 lots over June 19-July 20, when the latter traded as the front-month contract.

The front-month August MCX futures contract closely tracked the September NYMEX WTI contract and therefore expired Aug. 19, one trading day ahead of the latter's expiry Aug. 20.

The open interest for front-month August MCX futures stood at 2,784 lots on its last trading day Aug. 19, lower than that of the July MCX crude futures contract, which closed at 3,470 lots July 20.

The Middle East benchmark of Platts cash Dubai averaged $88.75/b in August, up from an average of $76.749/b in July, while the Dubai cash-futures spread, a measure of the market structure, strengthened to an average of $9.59/b in August, up from $1.50/b in July.

## CRUDE MOC: Medium sour differentials fall to 2-month low

- Platts assesses Dubai, Oman crudes at $8/b premium
- 23 Dubai partials trade during MOC

Cash differentials for Middle East medium sour crude markers fell for the third day to hit 2-month lows during the Singapore Platts Market on Close assessment process Oct. 13.

Platts, part of S&P Global Energy, assessed December cash Dubai and cash Oman both at a premium of $8/barrel to same-month Dubai futures at the market close, down $1.78/b day over day.

December cash Murban was down $1.02/b over the same period at a premium of $9.48/b to the same-month Dubai futures.

During the MOC, 23 December Dubai partials of 25,000 barrels each traded. The sellers were BP, Glencore and Unipec, while the buyers were Trafigura, Phillips 66 and ExxonMobil.

No convergences were reached during the MOC. A convergence occurs when 20 partials are traded between two counterparties in the same direction, resulting in a full 500,000-barrel physical cargo being declared from the seller to the buyer.

**October to-date MOC trade, convergence data**

| Partials traded | |
|---|---|
| Dubai Partials | 159 |
| Total partials trades | 159 |
| **Crude grades declared** | |
| Murban | 2 |
| Oman | 1 |

## Chad's Doba crude trades below $20/b discount to Dated Brent in Platts MOC

- Glencore sells Doba to Vitol at $23.75/b discount to benchmark
- Freight rates force FOB differentials to record lows

Doba crude from Chad saw a cargo trade in the Platts Market on Close assessment process on Oct. 13 below a $20/barrel discount to Dated Brent, marking the first trade for the grade in the process since the assessment launched in August 2015.

Glencore offered the cargo in the day's session at a $19.95/b discount to Dated Brent, which was lowered to a $23.75/b discount before being sold to Vitol prior to the 16.30 pm London close.

The offer was the second consecutive session the Nov. 10-11 loading, 950,000-barrel clip was offered, with Glencore opening their offer on Oct. 12 at a $13.25/b discount.

The day's trade was the first time a free-on-board priced crude oil cargo traded in the EMEA Platts MOC below a $20/b discount to Dated Brent.

Market sources told Platts on the day that crude freight rates holding at near all-time highs were forcing FOB cash differentials in West Africa to all-time lows.

"This market is completely out of control," one trader said.

Platts is a part of S&P Global Energy.

## Platts North Sea Crude Daily Market Analysis

- Differentials weaken; freight environment maintains price floor
- US crude inflow expectations remain mixed

The North Sea crude oil market softened in tandem with adjacent markets Oct. 13, although regional market fundamentals remained broadly constructive.

Offers across the North Sea, Mediterranean, and West Africa crude oil cargo markets during the Platts Market on Close assessment process revealed weaker differentials day over day.

A punitive freight environment remained the key theme among North Sea crude traders, with the short-haul nature of the regional market keeping a floor under differentials.

"North Sea cargoes have the advantage of short voyages, which makes sense in this freight environment," said a North Sea crude oil trader.

TotalEnergies offered an Ekofisk cargo loading Nov. 12-14 at a premium of $21.20/barrel to Dated Brent during the Oct. 13 MOC.

The offer demonstrated lower value day over day, but it was left standing at the London close.

Meanwhile, an ExxonMobil bid for a WTI Midland cargo arriving in Rotterdam in early second-decade November was swiftly matched by bp at a $22.50/b premium to Dated Brent.

Incoming WTI Midland volumes are expected to remain limited in the ongoing cycle, although freight costs are likely to increase available volumes to Europe in late November.

"[WTI] Midland is tight as Asia pulled quite a bit [of October loaders]," said a second North Sea crude oil trader.

"The volume of November loaders going East is very low," the trader continued, noting the elevated freight environment.

Still, while transatlantic voyages may appear more economical than the longer-haul journey to Asia, the squeeze on arbitrage economics may push US exporters to store volumes despite the steep backwardation in the market structure.

"It's better than paying freight," said a third trader, citing the $81 million booking of a very large crude carrier (VLCC) to Asia from the US Gulf Coast last week.

Platts, part of S&P Global Energy, assessed the US Gulf Coast-UK/continent Aframax freight rate at $199.60/mt Oct. 12, up $1.06 day over day and $94.55/mt from the previous month.

Americas Crude

## Landlocked Midwest refiners expand pipelines to reach coastal markets

- Laurel Pipeline expansion moves Midwest fuel east
- Western Gateway targets California supply gap
- Midwest refining capacity grows to 24% of US total

US Midwest refiners have long faced a structural problem: large, sophisticated refineries producing more gasoline, diesel and jet fuel than the regional market can absorb, with limited pipeline and waterborne access to move surplus barrels to higher-priced coastal markets.

Two infrastructure developments — the expansion of Buckeye Partners' Laurel Pipeline system into the US Atlantic Coast and the proposed Western Gateway pipeline connecting Illinois to Los Angeles — are now beginning to change that calculus.

The comparison with the US Gulf Coast is instructive. Few regions combine such diverse crude access, dense pipeline connectivity, enormous storage capacity and world-scale export infrastructure in one integrated system.

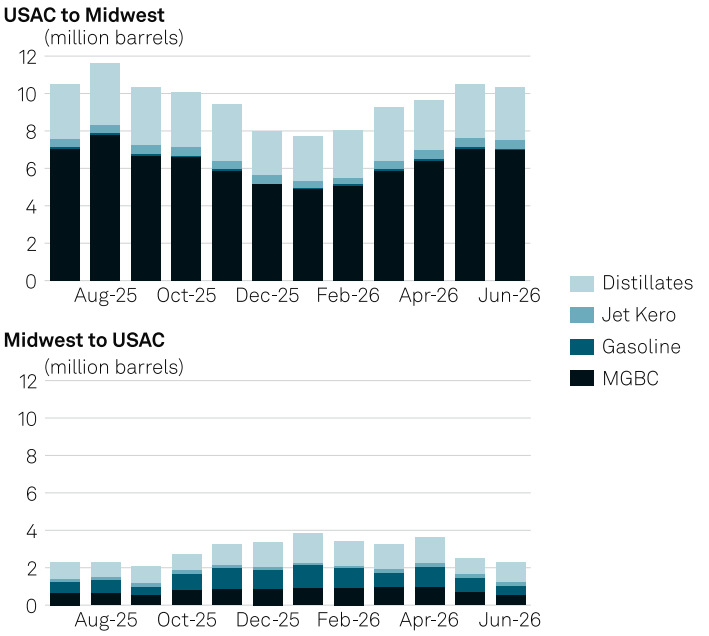

The USGC became the world's most important refining center not simply because it built large refineries, but because an unusually deep midstream network — anchored by the Colonial Pipeline's roughly 5,500-mile system from Houston to New York Harbor, alongside Explorer, Plantation, Buckeye and Magellan — allowed those plants to source almost any crude and sell products into almost any major market.

That combination gave Gulf Coast refiners exceptional scale, flexibility and multiple outlets for every barrel. It is precisely that model that Midwest refiners are now attempting to replicate.

### Shrinking USAC, growing Midwest

The structural case for Midwest-to-East flows has been building for decades. Between 1990 and 2016, US Atlantic Coast refining capacity fell by 570,450 b/d, according to Energy Information Administration data, leaving the region with 1.353 million b/d — just over 7% of total US refining capacity of 18.317 million b/d.

**Midwest-to-USAC pipeline to increase with expanded Laurel Pipe Line flows**

# California turns to US for refined products supply

California is turning to pipelines from the Midwest, Rockies, and US Gulf Coast to offset a refined-products shortfall after shutting down 18% of refining capacity, while imports from Asia have declined as the war in the Middle East reshapes global trade flows.

S&P Global Energy

Data from CERA Upstream Solutions. Compiled Sept. 17, 2026

By 2026, USAC capacity had fallen further to 896,300 b/d, representing roughly 5% of total US refining capacity of 18.16 million b/d. Over the same period, Midwest refining capacity rose to 4.282 million b/d, representing about 24% of total US capacity.

The competitive landscape shifted further in 2019 when the permanent shutdown of the Philadelphia Energy Solutions refinery — the largest on the USAC at 330,000 b/d, following explosions and fire at its alkylation unit — reduced locally refined product flows moving west on the Laurel Pipeline, weakening the case made by Philadelphia-area refiners that protecting intrastate east-to-west capacity was essential to regional supply security.

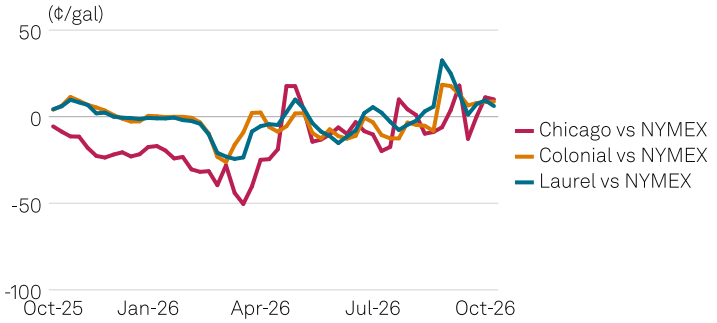

A 2019 FERC settlement had already authorized bi-directional service on the Coraopolis-to-Eldorado segment of the Laurel Pipeline, creating 40,000-60,000 b/d of west-to-east interstate capacity while guaranteeing 120,000 b/d of east-to-west intrastate capacity — roughly 22% of the pipeline's 180,000 b/d total — to protect Philadelphia-area refiners.

Phase 3 of Buckeye's Boardwalk project extended that logic further east, converting approximately 200 miles of additional Laurel infrastructure — Line 720, a 20-inch line from Mechanicsburg to Eldorado/Altoona, and Line 724, a 24-inch line from Sinking Spring to Mechanicsburg — to bi-directional service, adding 80,000 b/d of incremental Midwest-to-eastern Pennsylvania capacity.

The route connects onward via Buckeye's Eastern Products System to eastern Pennsylvania terminals and, via pipeline swaps, to New York Harbor.

FERC approved the tariffs on Sept. 10, 2026, for a service that had already begun Sept. 1. The Pennsylvania Public Utilities Commission's denial of a stay order requested by refiners and petroleum marketers allows Buckeye to operate the expanded service while state courts consider a pending appeal.

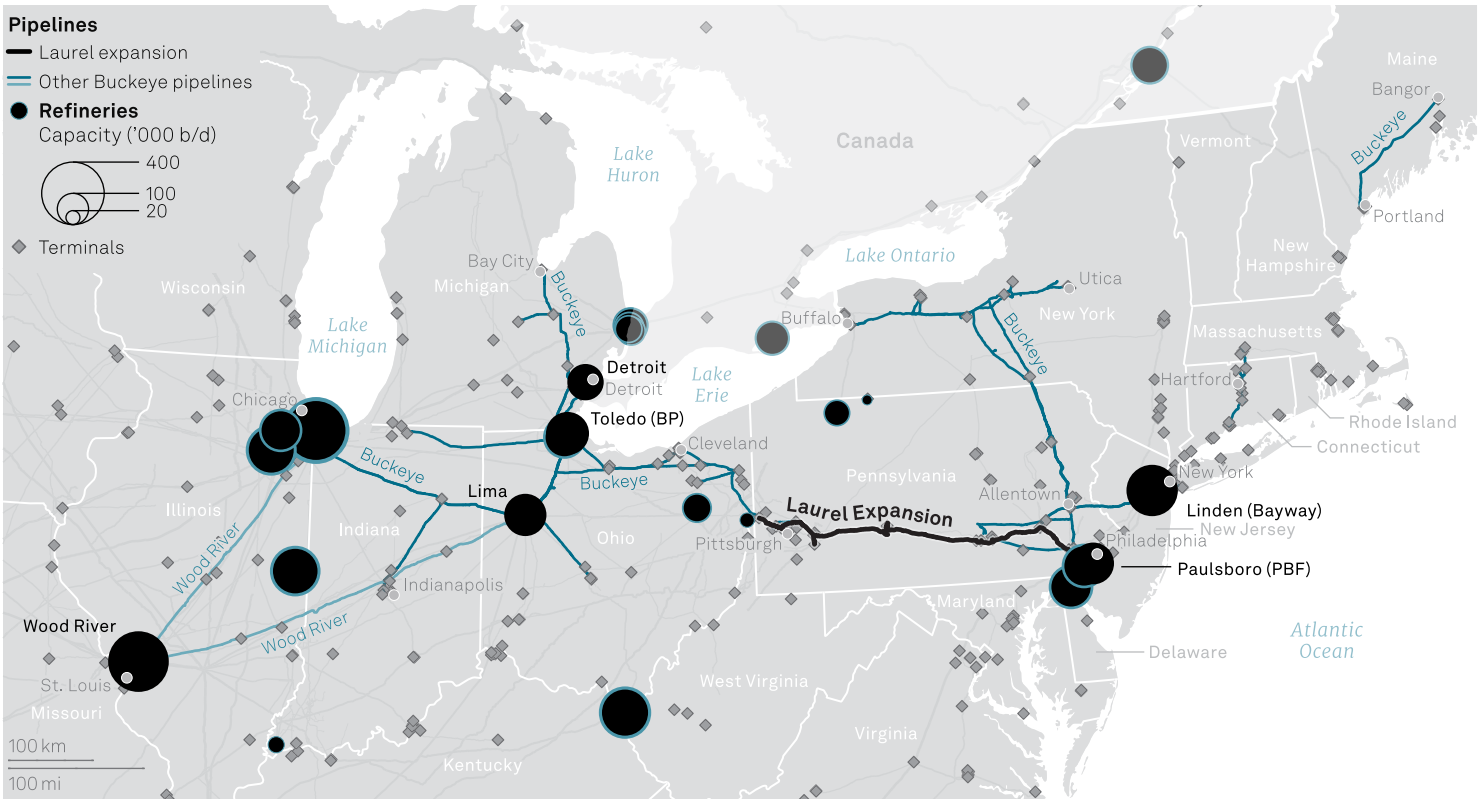

**Chicago Buckeye CBOB diffs up amid increased USAC flows**

The spread dynamics driving shipper interest were acute before the Sept. 1 launch, with Chicago CBOB trading at approximately 11 cents/gal under NYMEX RBOB and hitting intraday extremes of 27 cents/gal under NYMEX on Aug. 24, 2026.

Shippers moved quickly once flows began.

Citgo was the first refiner to publicly confirm on Oct. 1 it had begun shipping gasoline east from its Lemont, Illinois, refinery via the expanded Buckeye system, capturing the premium held by USAC refined product markets by moving surplus barrels produced at a Midwest discount past saturated regional racks.

For the week ended Oct. 9, 2026, Laurel Pipeline CBOB averaged $3.3680/gal, nearly 10 cents/gal above NYMEX RBOB futures, according to Platts assessments. Platts is part of S&P Global Energy.

Buckeye Chicago CBOB for the same week averaged $3.3527 per gallon at an 11.375 cents per gallon premium to futures — more than 60 times the 18 cents per gallon premium recorded for the week ended Oct. 2, when flows first began.

Even so, the tariff economics require scrutiny.

At Tier 3, Buckeye's Brewerton, New York, tariff exceeds Sunoco's competing rate by approximately $1.22/b from Midland, Pennsylvania, and $2.03/b from Toledo, according to FERC tariff filings, requiring equivalent Midwest origin discounts to reach parity.

Up to 80,000 b/d of new Midwest supply should pressure the Laurel-Chicago premium as barrels compete for eastern Pennsylvania terminal capacity, though the impact will depend on TSA participation rates and committed volume tiers. Buckeye said it had seen continued strong interest in movements but declined to comment on specific commitments.

**California: a market in need**

California's refined product market has been bleeding supply for years - and the Western Gateway pipeline final investment decision is the most significant structural response yet.

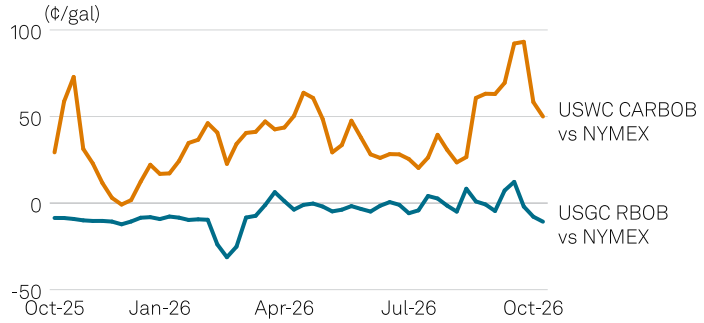

The Aug. 11, 2026, Final Investment Decision (FID) by Phillips 66, Kinder Morgan Inc., and HF Sinclair sets in motion a 1,300-mile, $5 billion pipeline system with a design capacity of 230,000 b/d, targeting completion in 2029 - subject to permits and regulatory approvals.

California has lost more than 30% of its refining capacity in five years, with the closure of the Phillips 66 Wilmington refinery in October 2025 and Valero's Benicia plant in April 2026, leaving California structurally short of in-state supply, with refiners pointing to unhospitable policy by the state as a reason for shutting down plants.

The state has grown increasingly dependent on waterborne imports - primarily from South Korea - to fill the gap, but that strategy has shown its limits: Asian supply has been squeezed by Middle Eastern crude disruptions, and West Coast gasoline inventories have remained persistently below year-ago levels through the summer of 2026.

The commercial underpinning for Western Gateway is the durable premium California-spec CARBOB commands over US Gulf Coast RBOB.

**Wide USWC CARBOB differentials to pull barrels west**

Source: S&P Global Energy

The pipeline creates a new fuel supply corridor originating from St. Louis, Missouri, and expanded Gulf Coast receipt points.

Phillips 66 will construct and operate an approximately 900-mile new-build pipeline from its Borger, Texas, refinery to Phoenix, Arizona, while its Gold Pipeline - reversed - will connect to the Explorer Pipeline and allow Midwest-origin refined products to flow toward Borger.

Kinder Morgan's existing SFPP West Line, running from Colton, California, to Phoenix, will also be reversed to move product east-to-west into California. The system is underpinned primarily by 10-year, take-or-pay contracts and is designed to allow future expansion with limited capital and no new pipe required.

ONEOK's Magellan Pipeline subsidiary has proposed the Sun Belt Connector, a roughly 440-mile refined-products pipeline from El Paso, Texas, to the Phoenix area that would transport gasoline, diesel and jet fuel at an initial capacity of about 200,000 b/d. In addition to the El Paso-to-Phoenix segment, the project's open season contemplated transportation options from Houston and southern Oklahoma into El Paso and Phoenix through the broader Magellan system. ONEOK has indicated the line could enter service in mid- to late 2029, but as of October 2026, no final investment decision or construction start has been announced.

Proposed pipelines could reduce USWC reliance on imported refined products, but may pressure regional refinery margins given cost advantages held by Midwest and USGC refiners — mirroring USAC's experience. The pipelines would also offer Midwest refiners a new outlet as local gasoline demand declines, according to analysts from S&P Global.

## Murphy sees first oil from Chinook well in Gulf of Mexico

- Initial production seen at 15,000 b/d
- Reports first oil in offshore Vietnam

Murphy Oil Corp. announced first oil from its Chinook #8 development well, part of the Cascade-Chinook field in the Gulf of Mexico.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

"The well located in Walker Ridge Block 425, some 180 miles south of Louisiana, is now online and producing through the Pioneer floating production, storage, and offloading vessel," it said late Oct. 12.

In line with pre-drill expectations, the well achieved an initial gross production rate of nearly 15,000 barrels/day, Murphy said.

Murphy holds an 86.7% working interest in Chinook #8, with Petrobras America Inc. holding the remaining 13.3%, it said.

Last March, Murphy said it had signed a purchase and sales agreement to acquire the Pioneer FPSO from BW Offshore with a storage capacity of 600,000 barrels of oil and processing capacity of 80,000 b/d.

**Updates from international operations**

Murphy also announced a successful appraisal at the Bubale West-1X well offshore Cote d'Ivoire and an exploration discovery at the Lac Da Trang (White Camel) North-1X well offshore Vietnam, as well as first oil from the Lac Da Vang (Golden Camel) field, also offshore Vietnam.

"These achievements highlight Murphy's ability to create value across exploration, appraisal, and development," CEO Eric Hambly said in a statement.

The Bubale West-1X well in Block CI-103 offshore Cote d'Ivoire was drilled to a total measured depth of nearly 19,357 feet and encountered 88 feet of net oil pay in the Turonian reservoir, Murphy said, noting additional hydrocarbons were also encountered in the deeper Albian reservoir.

"Preliminary analysis of logs and fluid samples indicates high-quality oil. Information obtained from the well will be integrated with existing subsurface data to optimize the remaining appraisal program at Bubale," it said.

For the Lac Da Vang (Golden Camel) field, Murphy is expected to ramp up development through 2028 as additional wells are brought online, with net peak production of nearly 10,000-15,000 barrels/day of oil equivalent, it said.

"The achievement of first oil represents a major milestone in Murphy's Vietnam strategy and establishes a new source of production and cash flow from the Company's offshore portfolio," it said, adding that net oil pay was encountered at 131 feet at the Lac Da Trang North-1X well.

Murphy and its partners will evaluate the Lac Da Trang North-1X data and assess potential appraisal and development options, it said, noting the now-producing Lac Da Vang asset provides nearby infrastructure for a potential tieback of the Lac Da Trang North discovery, creating a pathway to a capital-efficient, shorter-cycle development.

## Petroecuador reports oil spill at its SOTE pipeline

- SOTE pipeline leaked crude into Cupa River
- Fissure in the pipeline temporarily sealed
- SOTE pipeline was operating at 312,000 b/d

Petroecuador is working to contain a crude oil spill from its 360,000 b/d SOTE pipeline in northwestern Esmeraldas province, the state oil company said in a statement late Oct. 12.

The pipeline, halted for four days at the start of the month following a fire, leaked crude into the Cupa River at Km. 420, the company said hours after lifting a force majeure on crude shipments.

A team of 50 workers, who mobilized excavators, cranes, lighting rigs and vacuum trucks, temporarily sealed a fissure in the pipeline and installed oil retention ponds and containment booms, Petroecuador said. Local media showed footage of rivers running black with crude. It wasn't clear whether the company had to halt pumping operations again.

Petroecuador's press office didn't immediately respond to e-mails seeking comment.

The 498 km SOTE conduit, which links the company's Lago Agrio oilfields with its 110,000 b/d Esmeraldas oil refinery on the northwestern Pacific coast, was operating at 312,000 b/d, according to the company. The pipeline was shut three times last year due to leaks and erosion.

President Daniel Noboa, a 38-year-old businessman who was reelected to a second mandate last year, launched a $42 billion, five-year investment plan to boost oil production, including awarding oil and natural gas fields, refineries and pipelines as private concessions. Ecuador was producing 464,014 b/d through Oct. 12, according to the Energy Ministry. Petroecuador accounts for about 80% of the country's output.

Gasoline

## Platts US Gasoline Daily Market Analysis

- Gulf Coast premium grades strengthen
- Chicago differentials rise on buying interest
- California CARBOB hits lowest since August

Gulf Coast gasoline differentials strengthened Oct. 13 with premium grades posting the largest gains, while CBOB 87 values in Linden, New Jersey fell almost 10 cents as the market rolled to cycle 57. Buying interest pushed Chicago differentials higher, while in California CARBOB prices fell to their lowest levels in over a month.

**Gulf Coast**

US Gulf Coast gasoline differentials rose on Oct. 13 with premium CBOB and RBOB grades showing the greatest strength, while outright values tracked NYMEX RBOB futures lower across grades.

Platts assessed the benchmark CBOB 87 octane A-grade at a 7.75 cent/gal discount to NYMEX November RBOB futures, 3 cents stronger from yesterday's discount. The higher octane CBOB 93 D-grade rose further, gaining 4.75 cents to reach a 34.75 cent/gal premium.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Regular gasoline grades strengthened slightly as well, with unleaded 87 octane M-grade trading 1 cent stronger at futures plus 16.25 cents/gal while the unleaded 93 V-grade closed at futures plus 71 cents/gal. On an outright basis, both closed 3.16 cents, with M-grade reaching $3.41260/gal.

Throughout the USGC region, where unleaded 87 M-grade is a frequent export product, 4.18 million barrels of gasoline were loaded onto 16 vessels for shipment to destinations in Latin America and the Caribbean.

Of these, S&P Global Commodities at Sea data showed that 3.2 million barrels were discharged to Mexico, followed by Guatemala, which received about 612,000 barrels, and Trinidad and Tobago, which received about 332,000 barrels.

**Atlantic Coast**

On the US Atlantic Coast, gasoline outright prices and differentials dipped lower on Oct. 13, tracking the weakening prompt NYMEX RBOB futures contract.

Platts assessed the differential for benchmark barge RBOB at New York Harbor 0.65 cent lower on the day at futures plus 6.25 cents/gal, while its outright price dived 4.81 cents to $3.3126/gal.

Since the beginning of October, the barge RBOB assessment has dipped 27.55 cents, S&P Global Energy data showed, with futures falling and blending for winter-grade gasoline continuing to pick up.

Gasoline coming off of Colonial Pipeline at Linden, New Jersey, also dipped on the day, with Platts assessing CBOB 87 (A4) 9.66 cents lower at $3.2826/gal on Oct. 13, the first day Cycle 57 was assessed.

**Midwest**

In the Chicago complex, buying interest in BCX CBOB and West Shore CBOB followed Wolverine CBOB higher.

Wolverine CBOB extended its rally, with the differential rising 3 cents to NYMEX November RBOB futures plus 30 cents/gal. In the previous session, it climbed more than 19 cents to its highest level since Sept. 17, when it closed at a four-year high of futures plus 55 cents/gal.

Buying interest on the West Shore pipeline focused on RBOB, which Platts has assessed as flat to CBOB since the Environmental Protection Agency issued a national single-gasoline-pool waiver. West Shore RBOB traded as high as futures plus 30 cents/gal before the Platts Market on Close assessment process began at 1 pm CST and was later offered at that level. Platts assessed West Shore/Badger RBOB and CBOB 19 cents higher at futures plus 29 cents/gal, the highest level since Sept. 17, when it closed at a four-year high of futures plus 58 cents/gal.

Platts assessed BCX CBOB 13 cents higher at futures plus 23 cents/gal after a trade and offer at futures plus 24 cents/gal. Its differential was last higher on Oct. 6. Unlike the pipeline assessments, the differential was last reported higher on Oct. 6, rather than in September when all three assessments closed at multi-year highs.

**West Coast**

In California, CARBOB prices fell to their lowest levels since late August as more than 1.6 million barrels of gasoline headed toward the state.

Platts assessed Los Angeles CARBOB down 12 cents at NYMEX November RBOB futures plus 38 cents/gal, the lowest differential since Aug. 21, when it was assessed at futures plus 22 cents/gal. On an outright basis, the price fell 16.16 cents amid a weaker NYMEX market to close at $3.6301/gal, its lowest level since Aug. 27.

In San Francisco, the differential weakened 8 cents to futures plus 48 cents/gal, its lowest level since Aug. 20, when it was assessed at futures plus 30 cents/gal. The corresponding outright price settled at $3.7301/gal, also its lowest level since Aug. 27.

Meanwhile, S&P Global Commodities at Sea data showed seven vessels carrying an estimated 1.63 million barrels of gasoline en route to California. Three vessels, carrying approximately 714,000 barrels, were bound for San Francisco Bay, while the remaining 913,000 barrels were destined for the Los Angeles metropolitan area.

Platts is a part of S&P Global Energy.

Jet

## Platts Asia and Middle Eastern Jet Daily Market Analysis

- Tight tanker supply threatens Chinese exports
- Petrolimex seeks at least 10,000 mt jet A-1 for Nov loading

Asian jet fuel/kerosene prices remained supported amid mixed market sentiment Oct. 13, as tight availability of clean tankers could hinder Chinese exports from reaching the market despite the emergence of several prompt offers.

A broker pegged the balance-of-October regrade swap, the premium of jet fuel over 10-ppm-sulfur gasoil, at $1.40/b in midafternoon Asia trading Oct. 13, up from the Platts assessment of 10 cents/b at the Oct. 12 Asian close.

According to market participants, prompt offers for H2 October-loading cargoes from China have emerged, providing relief after a brief suspension during the Oct. 1-7 National Day holiday. However, tight vessel supply could pose headwinds to the shipment of these prompt-loading cargoes to the market.

"It's tricky because they are showing cargoes, but there are no ships. If that's the case, then it's uncertain if the market will eventually have these supplies," said a Singapore-based jet fuel trader.

"There's more than enough jet supply now that China is back; the main challenge now will be getting vessels because it's so prompt," said a Singapore-based jet fuel trader.

Further ahead, the market's outlook remains clouded by uncertainty surrounding whether China's export quotas will

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

suffice, as the third batch of allocations was lower than expected at about 4.5 million mt.

While some market participants expected supplies to tighten, others cited the possibility of additional quotas being allocated, while some noted that quotas from prior tranches had not been used up.

Seasonally, the Asian jet fuel/kerosene complex is expected to firm during the Northern Hemisphere winter season as demand picks up in Japan, where kerosene is used for heating.

Platts assessed the FOB Singapore jet fuel/kerosene cargo cash differential at plus $3.72/b to the Mean of Platts Singapore jet fuel/kerosene assessments Oct. 12, up 16 cents/b day over day.

In tenders, Vietnam's Petrolimex sought one or two cargoes of jet A-1 fuel 10,000-12,000 mt each for loading from South China/Straits/Thailand in November, with the laycan to be specified by the seller. The tender closes Oct. 15, with validity until Oct 19, with the first round closing Oct. 13.

In September, Vietnam's jet fuel imports fell 8.6% year over year but rose 27.6% month over month to 226,549 mt, according to preliminary data released by Vietnam Customs on Oct. 9. Inflows in the first nine months of 2026 totaled 1.74 million mt, up 8.9% year over year.

Vietnam's airline seat capacity is expected to grow 10.6% year over year to 6.52 million seats in October, according to data from aviation statistics company OAG.

Platts is part of S&P Global Energy.

## Diesel

### India's middle distillate exports to remain robust as European diesel stocks tighten

- Sept. exports at one-year high of nearly 740,000 b/d: CAS
- India cuts windfall gains tax on diesel, jet fuel exports
- Strong product exports boost India's oil terms of trade: CRISIL

India's middle distillate exports rose to a one-year high in September, supported by robust overseas demand as European diesel inventories continued to decline, creating scope for shipments from the South Asian supplier to remain elevated in the coming months, refining sources and analysts said Oct. 13.

Additionally, New Delhi's lowering of export duties in September will continue to encourage private Indian refiners to tap overseas markets, at a time when tighter global product supplies are increasing pressure on policymakers amid surging prices worldwide.

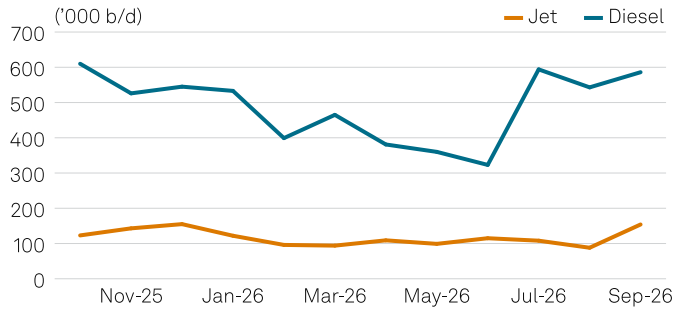

"India's increase in product exports in September coincided with tightening European diesel inventories, which are expected to reach their lowest year-end level in more than a decade," said Saransh Katiyar, liquid bulk analyst at S&P Global Commodities at Sea.

India's middle distillate exports rose to nearly 740,000 barrels/day in September, accounting for about 57% of the country's total oil product exports. Gasoil outflows rose to 586,000 b/d, representing 45% of total exports and standing 43% above average loadings in the first half of 2026, CAS data showed.

India cut the windfall gains tax on diesel and jet fuel exports while retaining the previous rate for gasoline, according to an Oct. 1 gazette notification from the Ministry of Finance, providing some relief to domestic refiners as renewed geopolitical tensions in the Middle East pressure earnings.

The new rates will apply for two weeks from Oct. 1, according to the notification. The new rate of the windfall tax — also known as the special additional excise duty (SAED) — and road and infrastructure cess on diesel exports will be 16 rupees/liter, down from 20 rupees/liter earlier, the notification said. The new rate for jet fuel exports will fall to 10.5 rupees/liter from 15 rupees/liter.

**India's diesel and jet fuel export trend**

Source: S&P Global Commodities at Sea

India's middle distillate shipments to Europe and the Mediterranean region reached a year-to-date high of 298,000 b/d in September, including 216,000 b/d destined for the Mediterranean. Gasoil accounted for 215,000 b/d of total shipments to the broader region, with about three-quarters of that heading to Mediterranean destinations. Of the gasoil shipped to Europe, 40,000 b/d was destined for Rotterdam, marking the resumption of flows to the port after February, CAS data showed.

"While Europe and the Mediterranean region have attracted a larger share of Indian cargoes amid disruptions to Middle Eastern refined products supply, early October data from Commodities at Sea suggests refiners are also expanding sales into Africa and Latin America, highlighting India's growing role as a flexible supplier to deficit markets," said Benjamin Tang, head of liquid bulk at CAS.

**Global supply squeeze**

India's jet fuel and kerosene exports nearly doubled month over month to 154,000 b/d in September, although volumes remained broadly in line with historical levels. The country exported an average of 151,000 b/d in 2025, predominantly to Europe and the Mediterranean region. Shipments to the region had remained limited since the start of 2026, aside from contracted deliveries to Italy.

Jet fuel and kerosene shipments to Europe and the

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Mediterranean region rose 11% month over month to 83,000 b/d in September. About 57,000 b/d was destined for the Mediterranean, while the remaining 26,000 b/d was shipped to Rotterdam in the Netherlands.

"Looking ahead, India's middle distillate exports could remain elevated if tightness in the European gasoil market persists," Katiyar said.

Loading activity remained strong in October. As of Oct. 12, India had loaded 747,000 b/d of middle distillates, with gasoil accounting for 79% and jet fuel and kerosene making up the remainder, CAS data showed.

The Asian ultra-low sulfur gasoil complex is expected to be volatile over Oct. 12-16, weighed by the G7's commitment to frontload the release of diesel stocks and the Russian government's partial lifting of its diesel export ban.

US President Donald Trump said Russia had agreed to supply global markets amid concerns over supply shortages and high prices. Meanwhile, China's estimated refined product export allocation of 4.5 million metric tons — well below prior expectations of 8 million mt — may provide some support to prices, brokers said.

The balance-month October gasoil exchange of futures for swap — an indicator of East-West arbitrage flows — was at minus $161.89/mt at the Oct. 12 close, compared with the Platts assessment of minus $219.24/mt at the Oct. 9 close.

**Export outlook**

"Given the global tight supplies of oil products, India's middle distillate exports will continue to remain elevated in the foreseeable future," said DLN Sastri, former director of oil refining and marketing at the Federation of Indian Petroleum Industry. "Private refineries will account for the bulk of the exports. Even state-run refiners like [Mangalore Refinery and Petrochemicals Ltd.] will be scouting for opportunities in overseas markets."

India will honor its overseas commitments for petroleum products, including diesel, Oil Minister Hardeep Singh Puri said Sept. 24, assuring global markets that the country would maintain supplies despite geopolitical tensions in the Middle East and the Russia-Ukraine conflict.

According to a Sept. 17 research by CRISIL, part of S&P Global, India's merchandise export growth of 18.8% so far in fiscal year 2026-27 (April-March) has been driven by a surge in petroleum exports, which rose 46% year over year, while non-oil exports increased at a slower pace of 14.4%. This marks a sharp reversal from the consecutive declines in petroleum exports recorded over the previous three fiscal years.

"India's oil terms of trade have improved since the onset of the West Asia conflict," said Dharmakirti Joshi, chief economist at CRISIL. "While crude oil import prices have risen sharply, export prices of refined petroleum products have increased even faster. Export volumes have also recovered in recent months after an initial disruption caused by the conflict."

"While exports to some markets have faced headwinds this fiscal year, shipments to newer markets have accelerated, partly offsetting the weakness. These markets are likely experiencing supply shortages from traditional suppliers such as West Asia and Russia amid geopolitical disruptions and reduced refining capacity," Joshi added.

*— Sambit Mohanty*

## Russia could boost diesel exports to 3.5 mil mt/month by year-end: Novak

- Lifting of export ban follows US sanctions waiver
- Russia prioritizes domestic market

Russia could increase its diesel exports to global markets to as much as 3.5 million metric tons/month by the end of 2026, Deputy Prime Minister Alexander Novak said Oct. 12.

"Overall, we have the capacity to increase diesel export volumes. By the end of the year, we could reach export levels of 3 million-3.5 million mt/month to global markets — matching precrisis figures," Novak said in an interview with television channel Rossiya-1.

The Russian government partially lifted a diesel export ban Oct. 10 after negotiations with the US administration.

The US Treasury Department's Office of Foreign Assets Control issued a sanctions waiver on Oct. 9, allowing the sale, delivery and import of Russian-origin diesel fuel, including importation into the US. The license is effective until April 7, 2027.

Russian diesel and gasoil exports averaged about 3.3 million mt/month over January-May, according to S&P Global Commodities at Sea, roughly in line with the volumes exported in 2025. However, exports declined from June, reaching 479,000 mt in September, the lowest monthly volume on record, according to CAS data, which dates back to 2016.

Additional Russian supplies to global markets "will help increase volumes and partially balance supply and demand," Novak said. "[This is a] trend we are already observing, including in global diesel prices, which have adjusted downward by about 5%-6%."

Platts, part of S&P Global Energy, assessed the European diesel benchmark price ULSD 10 ppmS CIF NWE cargo at $1,450/mt on Oct. 12, down from $1,496.5/mt on Oct. 8, before the announcement of the partial ban relief.

On Oct. 9, Novak said Russia is ready to supply 300,000 mt of diesel to the US market and other partners in October and 500,000 mt in November. He said that supplies could rise to 1 million mt in December. The increase in exports depends on the return of Russian refineries from maintenance, according to Novak.

Almost half of Russia's primary refining capacity was offline as of the end of September, according to S&P Global Energy CERA analysts.

President Volodymyr Zelenskyy said Oct. 12 that Ukraine has received no commitment from Russia to stop striking its energy infrastructure, contrary to a statement by US President

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Donald Trump declaring the two countries had reached an energy truce.

Novak said Oct. 12 that supplying Russia's domestic market remains a priority. "It is fully supplied with diesel fuel, given that our refinery capacities far exceed domestic demand," Novak said. "Agricultural operations — both harvesting and sowing — are fully covered today, as are northern supply deliveries."

Despite the sanctions, Russia supplied $21.3 billion worth of energy resources to Europe in the first nine months of 2026, Novak said, citing energy ministry data.

Resid

## Platts European Fuel Oil Daily Market Analysis

- Refineries extend fuel oil supply length
- Bunkering demand weakens on high prices

The European very low sulfur fuel oil market remained well supplied Oct. 13 amid refinery maintenance and lower local bunkering demand.

However, some limited movement on the arbitrage window out of the region provided some support for the complex.

While many refineries in Europe have postponed maintenance until next year to capitalize on the currently elevated distillate prices, some secondary unit works have put pressure on the European fuel oil complex.

In Rotterdam, for example, both Shell and BP refineries have maintenance at their vacuum distillation units.

"[Maintenance] makes them longer," said a European trader regarding fuel oil production.

Meanwhile, higher flat prices continued to weigh on buying appetite for 0.5%S fuel oil within bunkering hubs across the region, traders said.

In the high sulfur fuel oil market, appetite for product diverged across the region.

In the Mediterranean, demand was picking up in the west of the region following reports of tightness the week prior, traders said.

One Med-focused trader described the market as "a bit more balanced ... but there is still interest for prompt barrels."

In Northwest Europe, however, demand stayed limited, with market participants highlighting the volatility in Brent futures and fluctuating ZRE-A ticket prices as key headwinds in Rotterdam.

Trading activity in the Platts Market on Close assessment process was quiet Oct. 13, with 6,000 metric tons of trades observed in the Rotterdam VLSFO barge MOC and 4,000 mt traded for the HSFO equivalent. There were no trades for fuel oil cargoes.

Platts is part of S&P Global Energy.

Feedstocks

## Gasoline-naphtha spread hits two-month low amid naphtha bullishness

- Strong freight rates buoy naphtha price levels
- Open Med-Asia arb could tighten Europe; sources

The European naphtha complex has been soaring over the past week, prompting a multi-month low in the gasoline-naphtha spread.

Platts, part of S&P Global Energy, assessed the front-month gasoline-naphtha spread — the difference between the gasoline Eurobob 10ppm FOB ARA barge swap and the naphtha CIF NWE swap — at $212.50/mt on Oct. 12, the lowest in over two months. It was last seen weaker on Aug. 4, at $210.75/mt.

Soaring clean freight rates have been buoying naphtha delivered prices and widening the east-west spread, handing players the incentive to send cargoes east rather than retain volumes in the Atlantic Basin.

"Hearing east freight is very strong, so owners want to position vessels there," a trading source said.

An open Mediterranean-Asia arbitrage window can erode European supply availability as participants redirect their barrels eastward, which players say is supporting Northwest European prices.

"Some of the Mediterranean naphtha cargoes [are] heading east, so overall Europe looks tighter," the trading source said.

**Gasoline paper and physical markets diverge**

A strong Eurobob complex still continues to buoy naphtha prices. Winter gasoline specifications generally increase blending flexibility and can support greater naphtha incorporation.

"Eurobob is very strong, so it looks like October should stay supported, and let's see if this Asian pull rolls forward," the trading source said. "Also, winter blending, more naphtha can fit into the blending pool."

Tightness in European gasoline remains dominant in the spot markets, while paper markets are pricing in near-term relief.

Platts assessed the cash differential for FOB AR E5 Eurobob barges at $213.50/mt on Oct. 12, a one-month high.

Typically, such a strong backwardated structure puts pressure on smaller blenders to release stored blending material, as it becomes increasingly difficult to put together cargoes amid ongoing logistical issues on the Rhine.

## Asian ethylene-naphtha spread narrows to three-month low

- Naphtha prices surge past $1,000/mt mark
- Cracker margins fall below breakeven levels

The Asian ethylene-naphtha spread narrowed to a three-month low on Oct. 12 as a sharp rally in naphtha prices outpaced

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

gains in the olefins market, squeezing cracker margins across the region, market participants said.

Platts, part of S&P Global Energy, assessed the spread between CFR Northeast Asia ethylene and C+F Japan naphtha at $144/metric ton Oct. 12, down $92.13/mt week over week. The level was below the typical breakeven spread of $250/mt for integrated producers and $300-$350/mt for non-integrated producers. The spread was last lower at $106.25/mt on July 30.

Over the two weeks to Oct. 12, CFR Northeast Asia ethylene fell $40/mt to $1,150/mt and was unchanged from Oct. 2 onward, while C+F Japan naphtha rose $107.75/mt to $1,006/mt.

The narrowing spread was driven largely by the strength of the Asian naphtha market, with benchmark values climbing above $1,000/mt amid escalating freight costs and concerns over regional supply flows.

Market participants said soaring freight rates have significantly eroded arbitrage economics for shipments into Asia, limiting expected inflows for November and tightening supply in the region.

Meanwhile, freight costs for moving naphtha from the Persian Gulf to North Asia have surged to record highs as a growing number of LR2, tankers have switched to the dirty-products segment to capitalize on stronger earnings. As a result, LR2 freight rates reached an all-time high on Oct. 12 and even traded at a premium to LR1, vessels in Worldscale terms.

At the same time, heightened geopolitical risks have added further support to naphtha prices.

"Rising attacks on tankers in and around the Strait of Hormuz are again constraining oil flows from the Persian Gulf, reversing some of the export recovery seen in recent weeks," Daniel Hynes, senior commodity strategist at ANZ, said.

Platts assessed the benchmark C+F Japan naphtha price at $1,006/mt on Oct. 12, marking its first move above the $1,000/mt threshold since May 15, when it reached $1,022.50/mt.

Meanwhile, ethylene buyers remained cautious amid thin spot trade during China's Golden Week holiday, and higher feedstock costs failed to lift ethylene prices after trading resumed. On Oct. 12, sellers cited rising naphtha costs while buyers held to lower indications.

A trade involving an 11,000-12,000 mt US ethylene cargo was heard at $1,070-$1,075/mt CFR late Oct. 12, bound for Taiwan for December delivery. Another trade involving a 4,000-6,000 mt regional ethylene cargo was heard at $1,140-$1,150/mt CFR, bound for China. Both levels indicated largely stable to weaker ethylene prices despite the ramp-up in upstream naphtha prices.

Gas Liquids

## Platts Asian LPG Daily Commentary

- North Asia LPG prices rise on paper strength
- Asian propane-naphtha swaps spread narrows

CFR North Asia LPG prices edged higher at the close of Asian trading on Oct. 13, supported by strength in the paper market.

One bid was heard during the trading session Oct. 13, but no trades were concluded at market close.

Platts assessed CFR North Asia propane and butane cargoes at $987/mt and $1,057/mt, respectively, on Oct. 13, both up $1/mt from the previous session.

The spread between CFR North Asia propane and butane cargoes was assessed at minus $70/mt, unchanged day over day.

Platts assessed CFR East China propane at $985/mt on Oct. 13, up $1/mt from the previous session.

Platts assessed CFR South China propane at $984/mt on Oct. 13, up $1/mt day over day.

Platts assessed the CFR North Asia propane-to-C&F Japan naphtha front-month swap spread at minus $24/mt on Oct. 13, narrowing from minus $31/mt in the previous session.

In data news, Vietnam's LPG imports rose 11.6% month over month and 11.6% year over year to 298,673 mt in September, following two straight months of decline, according to preliminary data released by Vietnam Customs on Oct. 9. Kuwait supplied 46,882 mt, while China supplied 46,771 mt, the data showed.

In the first nine months of 2026, Vietnam's LPG imports rose 13% year over year to 2.73 million mt, with China, Malaysia and Australia its biggest suppliers, according to customs data.

According to a report from S&P Global Energy CERA released Oct. 12, the US continues to supply more than 90% of Japan's and South Korea's LPG imports, while meeting around 66% of Far East requirements overall. US deliveries to Southeast Asia reached approximately 668,000 mt in September, making the US the region's leading supplier.

Platts is part of S&P Global Energy.

Tankers

## Soaring tanker costs threaten to curb European refinery runs: analysts

- NWE refining margins fall but remain historically high
- VLCC cargo cascade shifts crude to smaller tankers

Surging tanker freight rates are challenging Northwest European refinery economics, and some analysts fear a threat to refinery run rates at a time of depleted stocks.

The cost of shipping a VLCC cargo from the Middle East to China has surged to about $35/barrel, up from just $3/b in early 2026, J.P. Morgan Commodities Research said Oct. 9. Freight from the US Gulf Coast to China has reached $41/b, compared with $6/b before the outbreak of the US-Israel war with Iran, citing prices from Platts, part of S&P Global Energy.

"In April, the problem was a shortage of crude. In October, it is the cost of moving it," J.P. Morgan analysts said.

The scope of the war has been intensifying in recent weeks, with attacks by Yemen's Houthis on Saudi infrastructure.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

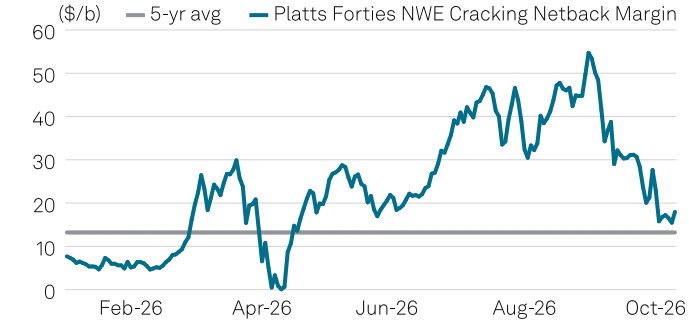

Amid this, Northwest European hydroskimming margins have collapsed, mirroring the deterioration seen in April, according to J.P. Morgan said. This raises the risk of run cuts at less complex facilities, the analysts said.

The Platts Forties Northwest Europe Cracking Netback Margin was $17.97/b Oct. 9, down 67% from Sept. 1, but still 36% above the five-year average. By contrast, flat prices for products remain buoyant; Platts assessed ultralow sulfur diesel on a CIF basis in NWE at $1,450/metric ton, or $194.63/b, on Oct. 12. This was 1% above Sept. 1 and 65% above its five-year average.

There is concern that high freight could blunt oil demand, shipbroker BRS said Oct. 12. "In a normal oil market, this would likely be valid, but in today's market — which is undersupplied by around 4 mb/d and is also suffering from an acute crunch in crude processing capacity — this is unlikely," BRS said.

There are concerns that plants in the developing world could encounter difficulty securing feedstock due to financing constraints, BRS said. "Governments in these countries are increasingly treating refineries as critically important infrastructure and are therefore making efforts to help secure oil supplies for these plants," BRS said.

**NWE refining margins dip amid high freight costs**

Source: S&P Global Energy

**Refining incentive**

The fears about refinery runs may be overstated.

"Distillate cracks remain elevated compared to historical norms, with the collapse in exports from Russia and restricted Middle East exports, so the incentive is still there to keep runs high," Rebeka Foley, an oil analyst at S&P Global Energy CERA, said Oct. 13.

Low stocks may support demand; stocks of middle distillates at Amsterdam-Rotterdam-Antwerp were 2.255 million mt in the week ending Oct. 8, 20% below the five-year average and 26% below the start of the war in late February, according to data from Insights Global.

The start of seasonal refinery maintenance will increase downtime and further encourage production, Foley said.

**Fleet dynamics**

Oil flows through the Middle East have reached as much as 14 million b/d around the start of October, but the way in which transits through the Strait of Hormuz are conducted can intensify shipping bottlenecks and further increase freight costs, Vitol CEO Russell Hardy said Oct.6. With more tankers from the private sector and Gulf states' national fleets willing to take transit risks in the contested waters, Hardy said 2 million b/d of refined products and 12 million b/d of crude were exported from the Middle East at that time.

In the week starting Oct. 5, 11.5 million b/d of crude was exported from the region of the Gulf, following a monthly rate in September of 16.2 million b/d, up from 4.3 million b/d in May, according to data from S&P Global Commodities at Sea. Increasing volumes have drawn an increasing number of tankers to the region, J. P. Morgan said.

The Platts VLCC index has been above the $1 million/day mark for most of October. It was $1.169 million/day Oct. 12, up 462% since the start of the Middle East war in late February and has averaged $139,560 /day since it was launched in March 2024.

Atlantic Basin producers are responding by loading onto smaller vessels, and a single VLCC cargo can be replaced by roughly two Suezmaxes or three Aframaxes. Outside the Middle East, Aframax employment has risen by 141 vessels — up 23% versus the 2025 average — while Suezmax employment has increased by 52 vessels, an 11% gain, according to J.P. Morgan data.

The cascade from larger to smaller tankers "continues to accelerate on a daily basis," fueled by cheaper freight on a dollars-per-barrel basis for smaller ships, BRS said.

This dynamic has so far not materially redirected trade flows, BRS said. Despite VLCC freight from the US to Asia reaching $80 million — equivalent to $40/b — preliminary shipping data for the second half of October continue to suggest more US crude is heading to Asia rather than Europe, BRS said.

## France seizes tanker suspected of shadow fleet activity in Indian Ocean

- Navy boards vessel 450 miles from Reunion
- DF Peak suspected of false-flag registration
- Shadow fleet rates cost $262,641 daily premium

France's navy has boarded and seized a tanker suspected of operating under a false flag and carrying illicit fuel cargo in the Indian Ocean, French President Emmanuel Macron said on X Oct. 12.

The latest French naval operation targeted the tanker DF Peak, intercepted more than 450 nautical miles south of the French overseas territory of Reunion, Macron said.

"This action, carried out in accordance with international law of the sea, demonstrates our determination to uphold the law and combat all forms of illicit trafficking, wherever they occur," Macron said.

The DF Peak, an Aframax, was suspected of sailing under a false flag, Macron said. This is a tactic commonly used by

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

shadow fleet operators to disguise the true origin or destination of a cargo; it involves registering a vessel under a flag state that offers minimal oversight, and is one of several methods used to obscure the paper trail linking a cargo to a sanctioned entity or country. The ship was also suspected of illicit transport of fuels, Macron said.

The boarding took place in international waters, Macron said.

The vessel's last observed port was Puerto La Cruz Tanker Anchorage West, Venezuela, and it is for orders, according to S&P Global Commodities at Sea.

The seizure of the DF Peak adds to a pattern of Western naval enforcement actions targeting vessels suspected of evading sanctions by obscuring their identity or ownership. Navies of EU and individual European countries have occasionally boarded or detained ships suspected of transporting sanctioned Russian oil in recent years, with past enforcements in the Baltic and North Sea, the Mediterranean and the North Atlantic. Burssels has planned to continue expanding the area of enforcement to undermine Russia's war chest against Ukraine.

Russia, Iran and Venezuela have also built networks to evade restrictions through shell companies, intermediaries, alternative payment channels and shadow fleet shipping, Mark Finley, fellow at the Baker Institute's Center for Energy Studies, said previously.

Transporting crude on shadow fleet vessels can be an expensive operation. Platts assessed the premium for carrying a cargo of crude on a shadow fleet Suezmax from the Black Sea to West Coast India over the rate for a compliant vessel at $262,641.17/day Oct. 12.

## Platts Americas Dirty Tanker Daily Commentary

- Suezmax local routes see surge in rates on fresh test
- VLCC Brazil-China run tests w14 lower
- Aframax transatlantic run sinks w25 on day

Despite minimal fresh testing, freight for the Americas Suezmax segment rose on Oct. 13 as market participants pointed toward deals getting done under the radar, tightening the position list.

"Lists remain on the tighter side," one shipbroker said.

One deal was reported in which CNOOC booked the Antarctic, with an owner's option for the Advantage Sun, to lift 145,000 metric tons of crude oil for a Nov. 7-9 loading Guyana-China run at w775, with demurrage set at $600,000/day. Discharge options were also negotiated to the UK Continent at w896.5, and Chiriqui Grande at w1,400.

Although it was later reported that the ship had failed subjects, market participants continued to deem the booked levels market-reflective. Calls for the 130,000 mt Guyana-UKC and 145,000 mt Cross-Caribbean runs were unanimously heard at w1,000 and w1,400, respectively.

When looking at the widened spread between local and transatlantic routes, a second shipbroker said, "Truth be told, the differentials are totally blown out at these high levels" and "now [market level is] at w1,000 on TA, so the effect of a shorter flat is magnified."

A third shipbroker agreed, adding that "no one wants to do short [hauls] right now."

Platts assessed the benchmark 130,000 mt Guyana-UKC run up w20 at w1,000, and the 145,000 mt Cross-Caribbean run surging w470 to w1,400.

Charterers were able to chip away at VLCC Brazil-China rates with reports that Petrobras booked the Empire Hope for a Nov. 14-15 loading run at w704.

Prior to Petrobras covering, expectations were for lower next-done levels with a fourth shipbroker saying, "There is a good number of ships in position for natural dates in Brazil, [so] charterers are now counterattacking."

Platts assessed the 260,000 mt Brazil-China run down w14 to w704.

While it was reported that Petrobras may have placed a second VLCC on subjects at the same level, no details could be confirmed by the close of the Oct. 13 Platts Market on Close assessment process.

Following the softer tone set out of Brazil, market indications fell to a range of $77 million-$78 million for the USGC-China run, with market participants indicating a need for fresh testing.

Platts assessed the benchmark 270,000 mt USGC-China run down $2 million to $78 million.

**Aframax rates see mixed movements**

On the transatlantic route, one Aframax was heard to be booked to transport crude from the US Gulf Coast to Europe.

BP booked the Minerva Elpida, loading Nov. 3-5, for a USGC-UKC/Mediterranean run at w930. However, market participants deemed the level not repeatable because it was an older deal from the prior week. Active market indications were heard between w900 and w950, with the bulk focused in the middle of the range.

Platts assessed freight for the benchmark 70,000 mt USGC-UKC voyage at w925, down w25 day over day.

With a lack of fresh testing on the local short-haul runs, indications were heard trending lower amid bearish sentiment. Platts assessed the 70,000 mt East Coast Mexico-USGC run at w990, down w10 day over day.

On the West Coast, activity was seen out of Vancouver with Cathay booking the Frontier Venture for a Vancouver-China run, loading Nov. 2-4, at $16 million. Following the deal, market participants talked freight at the achieved level.

Platts assessed the benchmark 80,000 mt Vancouver-China run up $1 million to $16 million.

Platts is part of S&P Global Energy.

## News

### Hormuz ship traffic rebounds a day after six maritime attacks

- 22 vessels cross Hormuz after attacks
- 106 ships hit since war began in February
- Northbound Bab al-Mandab traffic improves

Maritime traffic improved in the Strait of Hormuz on Oct. 12, according to S&P Global Commodities at Sea, a day after six ships were attacked around the choke point — one of the most precarious days for regional maritime security since the outbreak of the US-Israel war in Iran.

CAS data showed that a total of 22 ships crossed the Strait of Hormuz, including 13 tankers observed without their automatic identification system location signals activated. For comparison, 18 ships crossed on Oct. 11, and 22 ships were the average on Oct. 1-12.

On Oct. 11, four outbound oil tankers were attacked in the Strait of Hormuz while a fifth was struck near Sohar, Oman, and a container ship was also hit, according to the UK Maritime Trade Operations reports.

Among the ships were the Panama-flagged product tanker Kition M and the Bahamas-flagged crude oil tanker Ever Vict, according to Vanguard TECH. Separately, a Liberia-flagged dry bulk carrier caught fire off Oman on Oct. 12 for unknown reasons, the security consultancy added.

The Marshall Islands-flagged Suezmax Valthera was struck on Oct. 10 while carrying Iraq's Basrah Medium grade crude, and was most recently seen anchored north of Sohar, Oman, according to CAS.

Since the war broke out on Feb. 28, the International Maritime Organization said 106 ships have been attacked as of Oct. 13, killing 24 seafarers.

Speaking with Platts, part of S&P Global Energy, on the sidelines of an industry conference on Oct. 13, International Chamber of Shipping Secretary General Thomas Kazakos said the industry should prioritize crew members' lives above everything else and called on relevant parties to restore freedom of navigation.

The Strait of Hormuz traffic on Oct. 12 included two VLCCs, three Suezmaxes, eight product tankers and one container ship, according to a CAS report Oct. 13. The VLCC Centuries made its first visit to the Middle East since February 2020, CAS analysts said.

A Hong Kong investor owns Centuries via Centuries Shipping Ltd. and was last seen heading for Dubai, according to the report. Centuries Shipping could not be immediately reached.

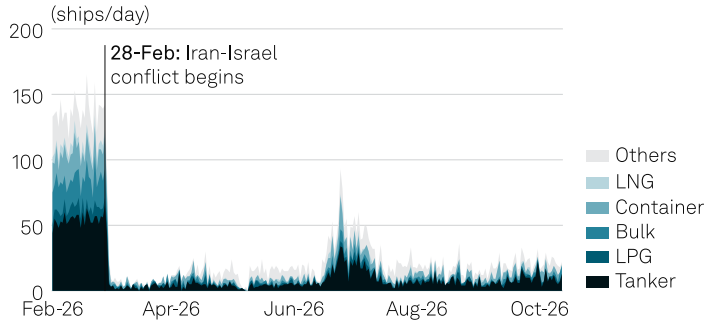

More than 80% of the traffic through the Strait of Hormuz was identified as compliant and unrelated to sanctioned ships, CAS said.

At the US naval blockade line, traffic fell day over day from 71 ships to 44 transits on Oct. 12, the lowest since Sept. 3, according to CAS

CAS data also shows 36 transits were detected at the Bab al-Mandab Strait Oct. 12, the same as on Oct. 11. Traffic included 17 tankers, 10 bulk carriers, four container ships and five vessels from other segments.

The Oct. 12 crossings, including 23 northbound transits, were the highest recorded since Oct. 7, according to CAS.

**Ships crossing Strait of Hormuz, by type, daily count**

### OPEC cuts 2026 global oil demand growth forecast again as global conflict rattles markets

- Expects demand growth of 200,000 b/d in 2026
- OPEC+ output up 900,000 b/d in September
- Dated Brent assessed at $134.245/b on Oct. 12

OPEC has cut its 2026 global oil demand growth forecast amid ongoing production and supply disruptions linked to the conflict in the Middle East.

OPEC now expects global oil demand to grow by 200,000 barrels/day in 2026, compared to last month's estimate of 400,000 b/d, it said in its monthly oil market report released Oct. 13.

In 2026, OPEC has repeatedly cut its estimate for global oil demand growth, which has fallen from 1.4 million b/d at the start of the year.

OPEC has pushed much of the oil demand growth it expected to come in 2026 into 2027 estimates.

It sees global oil demand growing by 2.6 million b/d in 2027 to average 108.3 million b/d, the report said.

"This is assuming that oil demand in 2026 will indeed soften as currently expected and will be further bolstered next year by the need to replenish oil inventories at large," OPEC said.

OPEC also cut the 2026 "call" on OPEC+ crude — the quantity the alliance must produce to balance the market — to 42.1 million b/d, down 100,000 b/d from its September estimate. It expects the call on OPEC+ crude to be 43.9 million b/d in 2027.

OPEC+ crude production in September rose 900,000 b/d month over month to 39.07 million b/d, according to secondary sources used by OPEC to assess output levels.

Middle East member countries' oil production and supply have been disrupted by attacks on energy infrastructure and restrictions on shipping via the Strait of Hormuz. Producers have benefited from higher oil prices, however. Platts, part of S&P Global Energy, assessed Dated Brent at $134.245/b on Oct. 12,

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

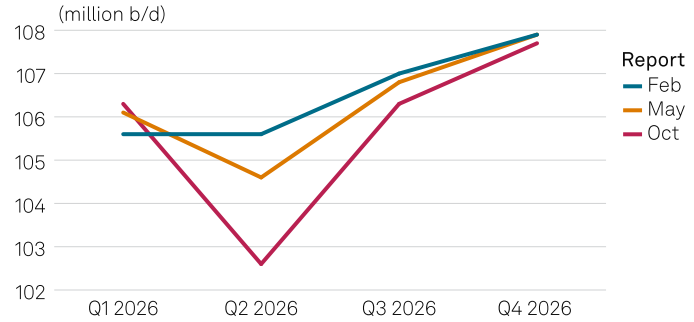

up from $70.94/b on Feb. 27 — the day before the US and Israel attacked Iran.

OPEC maintained its estimate of liquids production growth from countries not part of the OPEC+ agreement at 600,000 b/d in 2026.

"The main drivers of liquids production growth are expected to be Brazil, the US, Canada, and Argentina," the report said.

OPEC also stuck to existing forecasts for non-OPEC+ production growth in 2027 of 600,000 b/d. In addition to continued growth in the Americas, it expects Qatar to drive some of this increase.

**OPEC cuts 2026 oil demand forecasts**

Source: OPEC

**Shipping concerns**

Separately, OPEC said on Oct. 12 that energy and oil ministers from countries participating in the OPEC+ crude production agreement met on the sidelines of the 17th IEF ministerial meeting and the 25th WPC Energy Congress in Riyadh.

The group affirmed the critical importance of safeguarding international maritime routes to ensure the uninterrupted flow of energy, and noted that current disruptions have elevated shipping and insurance costs to unprecedented levels of more than one-third of the commodity value.

"The ministers further stressed that these exceptionally elevated costs are ultimately transmitted across the oil value chain, increasing and prolonging the cost burden on producing and consuming countries and impacting global economic growth," OPEC said.

OPEC said the group will continue to monitor the situation and will engage with governments, industry stakeholders and international organizations such as the International Energy Forum, the International Energy Agency and others to improve global shipping conditions.

## Japan to provide P&I, compensate cargo, hull cover for crude, oil products, LNG transport

- To provide LNG shipping insurance if foreign reinsurance is lost
- Three bills to enhance stability of crude oil, other fuel supplies
- JOGMEC to provide subsidies based on CCS cost-carbon price gap

Japan is set to provide protection and indemnity cover and partially compensate cargo and hull insurance payments for the transportation of crude oil, oil products and LNG, as part of a bill approved by the Cabinet on Oct. 13, a senior official at the Ministry of Economy, Trade and Industry said.

The bill is one of three approved by the Japanese Cabinet earlier Oct. 13 to enhance the security of the country's crude oil supply, among others, amid the conflict in the Middle East.

"The Ministry of Land, Infrastructure, Transport and Tourism will revise the existing specified tanker act. The current law covers crude oil, and the scope will be expanded to include petroleum products such as naphtha, as well as liquefied natural gas," the METI official told a press briefing.

METI will also introduce similar support measures for hull insurance and cargo insurance, the official added.

In response to the Middle East situation and to ensure a stable supply of energy to Japan, METI said the government will establish a program under which it will partially compensate non-life insurance companies for the funds required to pay insurance claims under marine property insurance, such as cargo and hull insurance, covering the transportation of crude oil, oil products and LNG, even in cases where the provision of reinsurance is prohibited.

"In the event foreign insurance companies become unable to provide reinsurance coverage, a situation could arise where the cargo is available but cannot be transported," the official said. "To address such circumstances, the government will establish a mechanism to fill the gap left by the unavailable foreign reinsurance coverage."

Japan introduced a law in 2012 to compensate P&I cover as a sovereign guarantee for each tanker carrying Iranian crude amid EU sanctions against Iran — an initiative that remains in effect to date. However, Japan suspended its imports of Iranian oil in May 2019.

The Japan P&I Club, formally known as the Japan Ship Owners' Mutual Protection & Indemnity Association, provides insurance cover of up to about $9.8 billion per tanker.

METI Minister Ryosei Akazawa said earlier Oct. 13, "Today, the Cabinet approved three bills: a bill concerning the rationalization of the use of designated sea lanes to ensure the stable transportation of crude oil among others; a bill on special measures to secure the fulfillment of specified cargo insurance contracts and specified vessel insurance contracts; and a bill to partially amend the Act on the Japan Organization for Metals and Energy Security."

"In light of the structural changes taking place in the global energy landscape, including the recent situation in the Middle East, it is necessary to strengthen the resilience of Japan's energy supply and demand structure," Akazawa told reporters.

"Through these three bills, we aim to fundamentally enhance the stability of procurement by diversifying the sourcing of crude oil and other fossil fuels and reducing associated risks," he added.

The Cabinet's approval comes after Japan formulated an energy policy package on Aug. 26, under the direction of Prime Minister Sanae Takaichi, to bolster the resilience of the country's energy supply and demand system through Green Transformation (GX) initiatives known as POWERR GX.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

**Other bills**

The first bill, which concerns the rationalization of the use of designated sea lanes to ensure the stable transportation of crude oil and oil products, importers such as refiners, petrochemical producers and trading houses will receive grants when they procure crude oil and oil products from suppliers located outside the Strait of Hormuz region, the official said.

To receive the grant, these companies will be required to formulate a designated sea lane rationalization plan that sets out details such as procurement targets, the types of crude oil covered, shipping routes and the duration of the plan, the official added.

The government will then review and certify the plan, after which JOGMEC will provide grants covering a portion of the costs associated with supply diversification, the official said.

The funding for these grants will come from contributions paid by refiners and other importers, which JOGMEC will use to finance the grant program, the official added.

Regarding the bill amending the JOGMEC Act, the official said the recent situation in the Middle East has underscored the critical role that alternative pipelines can play in ensuring Japan's crude oil procurement.

The proposed measure would allow JOGMEC to provide equity investments and debt guarantees for such pipelines, which are not associated with specific oil and gas fields, as it can currently provide equity investments and debt guarantees only for pipelines associated with oil and gas fields, the official added.

As part of the amendments to the JOGMEC Act, JOGMEC's mandate will also be expanded to include equity investments and debt guarantees for projects involved in overseas biofuel production, the official said.

"Demand for biofuels and other alternative fuels is expected to increase due to regulations in Japan and overseas," the official said. "It is important to ensure ample supply so that biofuel supply and demand can be brought into proper balance."

JOGMEC's functions will also be expanded to include equity investments and debt guarantees for smelting and refining projects that process used materials, such as spent batteries and other recyclable metal resources, the official said.

JOGMEC will also be given the additional function of administering subsidy programs for carbon capture and storage projects, the official said, adding that the subsidies will be provided in accordance with grant criteria established by METI and are intended to support projects by addressing the gap between CCS costs and the prevailing carbon price.

## BP flags soaring refining margins, strong gas trading in Q3

- BP's refining margin leaps to $46.7/b
- Gas trading results surge, oil trading flat
- Writes down $3B-4.5B, mostly in transition unit

BP should see third-quarter earnings buoyed by surging refining margins across its downstream portfolio, as well as an even stronger gas trading result, it said Oct. 13, while flagging $3 billion-4.5 billion of impairments, primarily in its transition business.

In a trading statement, the UK major — which has been undergoing a strategic reset under new CEO Meg O'Neill — said stronger realized refining margins would add $1.9 billion-2.1 billion to its results in Q3.

That will come despite slightly lower throughput following the divestment of the Gelsenkirchen refinery, at 1.38 million-1.41 million barrels/day. Rather, it reflects soaring refining margins of $46.7/barrel, compared with $29.6/b in Q2.

Disruptions to flows through the Strait of Hormuz have sent refined product prices soaring, and diesel cracks to record highs, despite crude flows out of the region starting to recover, according to ship-tracking data.

BP added that its oil trading result in Q3 would be "broadly flat compared with the second quarter," but said its "gas marketing and trading result is expected to be significantly higher."

The company also flagged impairments of $3 billion-4.5 billion in the quarter, "primarily attributable to transition businesses in the gas and low-carbon energy segment."

A spokesperson for BP declined to comment on the details of the write-downs.

Under O'Neill, who took over at BP in April, the company has refocused on its core oil and gas business after a largely unsuccessful shift toward renewables over the past few years.

On the production side, BP narrowed its Q3 upstream output guidance and now expects to pump 2.19 million-2.24 million barrels of oil equivalent/day, compared with 2.201 million boe/d in Q2.

That reflects a recovery from seasonal maintenance, offset by BP's reduced equity interest in Latin America, it said, and the continued disruptions in the Middle East.

Of that, gas and low carbon will rise slightly to 775,000-795,000 boe/d, while oil will be within a band of 1.415 million-1.445 million boe/d in Q3.

Full-year production guidance is expected to be in the region of 2.18 million-2.27 million boe/d, the company said.

**Price volatility**

BP said it recorded an average Brent crude price of $96.99/b in Q3, compared with $103.85/b in Q2, while its US gas Henry Hub price edged up to $2.96/million British thermal unit.

Platts Dated Brent soared past $144/b in April after the war, and has been volatile ever since. Platts is part of S&P Global Energy.

On the financial side, the major said its net debt at the end of Q3 would fall to $13.5 billion-14.5 billion, from $22.3 billion at the end of Q2.

## Galp Q3 upstream output from Brazilian offshore rises 14% YOY

- Refining margin hits record-high $33.80/b
- Oil increases to 90% of production mix

Portuguese integrated energy group Galp Energia SGPS, SA said Oct. 12 its Q3 working interest upstream production from the Brazilian offshore rose 3% from Q2 and was up 14% year over year at 131,000 boe/d.

To reach the updated target of around 130,000 boe/d for all of 2026 announced in July, Galp needs to keep its Q4 production at around 133,000 boe/d, following Q1 volume of 129,000 boe/d and Q2's 127,000 boe/d.

Figures for Q3 are preliminary, with full results to be announced Oct. 26.

The ratio of oil in the production mix has increased to 90% from 88% in Q2 and 86% in Q3 25, Galp said in the regulatory filing.

Galp has a 20% stake in the Equinor ASA-operated Bacalhau field. The project has been ramping up during 2026 toward a production target of 220,000 boe/d set for year-end, according to Galp co-CEO Maria Joao Carioca's statement made July 27.

Equinor did not respond to Platts' Oct. 13 request for comment.

Galp also announced Oct. 7 that a consortium with Equinor as operator with a 70% share and Galp with a 30% share, was awarded a new block in Brazil's latest tender, the Rodocrosita block, which lies adjacent to the Bacalhau development in block BM-S-8.

The field has "future optionality to explore potential synergies with the Bacalhau project," Galp said.

**Record margin**

Downstream, Galp reported a record-high refining margin of $33.80/b in Q3, roughly doubling from $16.80/b in Q2 and more than tripling in annual comparison from $9.50/b, according to the preliminary figures.

Galp operates the 228,000 b/d Sines refinery. The hydrocracker at Sines refinery started a planned maintenance Sept. 24, with the work scheduled to last 37 days.

Refinery throughput in Q3 was 22.2 million boe, down 2% year over year and down 2% quarter over quarter. Throughput for the first nine months of 2026 stood at 63.5 million boe, preliminary figures showed.

The company said in July that it expected full-year throughput between 80 million and 85 million barrels.

Oil product sales totaled 2.0 million mt in Q3, down 1% year over year, but up 10% quarter over quarter, the preliminary figures showed.

Galp's gas and LNG supply and trading volumes increased 26% year over year to 21.4 TWh in Q3, it said, lifted by a 33% year-over-year increase in trading volume to 15.8 TWh.

## OIL FUTURES: US diesel cracks surge as market discounts Russia supply impact...from page 1

Further clouding supply outlooks, President Volodymyr Zelenskyy said Ukraine has received no commitment from Russia to stop striking its energy infrastructure, contrary to a statement by US President Donald Trump declaring the two countries had reached an energy truce, according to his address at the Warsaw Security Forum Oct. 12, quoted by Interfax-Ukraine.

"There's considerable skepticism over the Russia-Ukraine energy ceasefire, particularly with reports that Russia has hit Ukrainian energy targets since Trump announced it. While diesel initially saw some weakness following the US-Russia deal, strength has returned," ING's Warren Patterson said.

NYMEX November RBOB settled 4.16 cents/gal lower at $3.2501/gal.

Crude prices lacked direction as traders weighed improved Middle East supply outlooks and the potential for near-term escalation in the region.

NYMEX November WTI settled 40 cents/b higher at $94.14/b, and ICE December Brent declined 96 cents/b to $105.69/b.

OPEC+ crude output rose by 900,000 barrels/day month over month to 39.07 million b/d in September, according to secondary sources used by OPEC to assess output levels, and the producer group cut its outlook for global demand growth to 200,000 b/d in from 400,000 b/d the month prior.

Concerns over supply chain disruptions through the Persian Gulf persisted, with vessel movements through the Strait of Hormuz under pressure amid a series of security incidents.

Vessel traffic through the Strait of Hormuz climbed to 22 on Oct. 12, S&P Global Commodities at Sea data showed, up from a two-week low of 18 on Oct. 11, despite at least four ship attacks near or within the chokepoint since Oct. 10.

Besides the confirmed ship attacks, the US Central Command said Oct. 11 that US forces disabled the Panama-flagged bulk carrier Akira Sun after it attempted to run the US naval blockade, having previously departed an Iranian port.

"This is raising concerns in the shipping industry that risks taken to transit the strait are becoming too high. This has seen a growing number of supertankers turning away from the Persian Gulf," ANZ's Daniel Hynes said in a note Oct. 13.

# Refinery updates

## REFINERY NEWS: Phillips 66 refinery upset disrupts operations at Texas complex

- Refinery: Sweeny, Texas
- Owner: Phillips 66
- Overall capacity: 277,000 b/d
- Units affected: N/A
- Duration: Began Oct. 12

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Phillips 66's Sweeny refinery in Texas experienced a refinery-wide upset tied to Cogeneration Unit 1 on Oct. 12 that led to flaring and the release of 2,936.7 lb of sulfur dioxide from the coker flare, according to a filing with the Texas Commission on Environmental Quality on Oct. 13.

The event began at 3:35 pm CT and lasted nearly five hours.

Phillips 66 said the refinery experienced a process upset affecting Cogen 1 and refinery operations. Operators stabilized affected units and returned the refinery to normal conditions, with emissions calculated using continuous emissions monitoring system data and engineering estimates.

In a separate filing from Chevron Phillips Chemical's adjacent Sweeny-Old Ocean petrochemical complex, the company reported a site-wide loss of steam from a third-party provider beginning at 3:18 pm CDT and lasting about five hours, resulting in flaring at Ethylene Units 22, 24 and 33.

The company said it stabilized operations by reducing feed rates and switching critical equipment to electric spare units. While neither filing directly links the events, the nearly identical timing suggests the refinery cogen upset may have disrupted steam supply to the integrated petrochemical complex, contributing to flaring and reduced operating rates at the ethylene units.

A company spokesperson was not immediately available for comment.

## REFINERY NEWS: Russia's Slavyansk continues with repairs after attack

- Refinery: Slavyansk (Slavyansky, Slavinsky), Krasnodar, Russia
- Owner: Slavyansk Eco
- Overall capacity: 4 million mt/year (80,000 b/d)

Russia's Slavyansk refinery said Oct. 13 that it continues with repairs after a large-scale attack on Sept. 13.

It also said that experts are assessing the consequences and that the refinery had incurred serious damage, which is affecting its timelines.

It said it cannot currently provide details on when normal operations will restart.

It previously said that it had halted operations after the attack.

The Slavyansk refinery caught fire after a Ukrainian attack on Sept. 13, which took five days to extinguish.

## REFINERY NEWS: Belarus Naftan continues with maintenance work

- Refinery: Naftan, Novopolotsk, Belarus
- Owner: Belneftekhim
- Overall capacity: 12 million mt/year (240,000 b/d)

Belarus Naftan continues with its maintenance work, it said in an in-house publication Oct. 13.

A number of units went into maintenance from Oct. 1, including AVT-6 (CDU VDU 6), rectification column, hydrotreater, xylenes isomerization, paraxylene, hydrogen and others. The sulfur unit also started a second phase of works, having completed the first one at the start of autumn.

Works continue on the gasoline isomerization which started in September. During the shutdown, it will also carry out minor works at all remaining units.

The turnaround is set to last up to 10 days where minor repairs are performed, and up to 30 days units at the rest.

Naftan said in September that its planned maintenance was underway.

The whole turnaround is set to last 60 days.

Russian media has previously reported that Naftan was planning full maintenance this autumn.

## REFINERY NEWS: Japan's Idemitsu restarts Keihin CDU after prolonged maintenance

- Refinery: Keihin, Tokyo Bay
- Owner: Toa Oil, wholly owned by Idemitsu Kosan
- Overall capacity: 60,000 b/d
- Duration: March 22-Oct. 7

Japan's second-largest refiner, Idemitsu Kosan, restarted the sole crude distillation unit at its Keihin refinery in Tokyo Bay on Oct. 7 after completing scheduled maintenance, a company spokesperson told Platts, part of S&P Global Energy, Oct. 13.

Idemitsu suspended operations of the Keihin CDU March 22, planning initially to resume operations in July, the spokesperson said.

The spokesperson did not mention the reason for the prolonged maintenance.

The nameplate capacity of the CDU stood at 70,000 barrels/day as of March 22, when operations were suspended. However, on April 1, Idemitsu lowered the capacity to 60,000 b/d following the termination of its business tie-up with Cosmo Oil.

Platts assessed average prices across the Chiba, Kanagawa, Chukyo and Hanshin regions on Oct. 13 for gasoline at ¥98,550/kiloliter ($98.99/barrel), kerosene at ¥120,750/kl, gasoil at ¥100,800/kl, low-sulfur A-fuel oil at ¥100,575/kl and A-fuel oil at ¥100,075/kl.

## REFINERY NEWS: Germany's Schwedt plans maintenance in 2027: sources

- Refinery: PCK Raffinerie, Schwedt, northeast Germany
- Owner: German state (54.17%), Shell (37.5%), Eni (8.33%)
- Overall capacity: 232,000 b/d

Germany's Schwedt refinery is planning maintenance in the first half of 2027, according to several market sources with knowledge of the matter.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The refinery did not respond to requests for comment by Platts, part of S&P Global Energy.

Schwedt last carried out maintenance work over April-June 2023.

## REFINERY NEWS: Vietnam's Dung Quat operates at 123% capacity in first nine months

- Refinery: Dung Quat, Quang Ngai province, Vietnam
- Owner: Binh Son Refining and Petrochemical
- Overall capacity: 130,000 b/d

State-controlled PetroVietnam Refining and Petrochemical Corp. (BSR) operated at an average capacity of 123% between January and September, PetroVietnam said in a statement on Oct. 12.

That rate is higher than the 118% capacity in the same period last year.

In the first nine months, BSR produced 6.15 million mt of petroleum products, mainly refined products, up 4.8% year on year, according to PetroVietnam.

BSR has recognized that relying solely on existing plant operations leaves limited headroom for expansion. Therefore, the refinery upgrading and expansion project is considered as the decisive foundation for its medium- and long-term growth, PetroVietnam said.

On July 9, BSR awarded the engineering, procurement and construction (EPC) contract to a Chinese contractor consortium to build the refinery upgrading and expansion project. The consortium of China Chengda Engineering and Beijing Petrochemical Engineering would have 37 months to put the project into operation, which is scheduled for 2028, Platts, part of S&P Global Energy, reported earlier.

In the statement on Oct. 12, PetroVietnam said the upgrading and expansion project has entered the implementation phase following a kickoff meeting for the EPC contract between BSR and the contractor consortium on Aug. 21. Ground leveling is currently over 85% complete, on track for clean site handover in November 2026.

Dung Quat and the 200,000 barrels/day refinery at Nghi Son together meet roughly 70% of Vietnam's oil products demand, with the remainder from imports, according to a Vietnamese government statement on March 9.

**Platts amends Abu Dhabi crude OSPs publication**

Platts, part of S&P Global Energy, has updated its publication of Abu Dhabi crude official selling prices effective Oct. 8, 2026, in line with changes announced by Abu Dhabi National Oil Co. (ADNOC).

In July, ADNOC said it would adopt a prompt-month pricing methodology based on the Platts Dubai benchmark (PCAAT00) plus an ADNOC-announced differential for the OSPs of its Abu Dhabi onshore and offshore crude grades, with effect from November 2026 loadings. ADNOC added that it would announce the OSP differentials for Murban, Das, Umm Lulu and Upper Zakum in the month prior to the delivery month.

Accordingly, Platts will publish the monthly OSP differentials for the four grades, basis Platts Dubai, beginning with the November differentials issued by ADNOC on Oct. 8, 2026.

Platts first announced the change in a subscriber note published on Aug. 31, 2026.

The OSP differentials are published under the following reinstated codes:

| Grade | OSP Diff to Dubai |
|---|---|
| Murban | AAIOS00 |
| Umm Lulu | OSLUD00 |
| Das Blend | AAXPL00 |
| Upper Zakum | AAIOV00 |

Platts previously published the OSP differentials under these codes until May 2021, when they were then suspended due to a change in the ADNOC pricing methodology.

From November, the existing codes for the outright OSPs for Murban (AAIKZ00), Upper Zakum (AAILC00), Das Blend (AAXPH00) and Umm Lulu (OSLUF00) will remain unchanged. Platts will publish the outright OSPs of the four grades following the publication of the average of Platts Dubai crude assessments during the month of loading.

In view of the changes, Platts is no longer updating the codes reflecting Upper Zakum, Das Blend and Umm Lulu OSP differentials against Murban, as well as the codes for all four grades, including Murban, calculated against the monthly average of Platts cash Dubai 1st Line assessment in the month of trade.

The following codes will no longer be updated from October:

| Grade | Diff to Dubai | Diff to Murban OSP |
|---|---|---|
| Murban | AOSPA00 | |
| Umm Lulu | AOSPB00 | AOSPE00 |
| Das Blend | AOSPC00 | AOSPF00 |
| Upper Zakum | AOSPD00 | AOSPG00 |

ADNOC's OSPs are published in the Platts price database and on Platts Global Alert page 1051.

Please send all feedback or questions to asia_crude@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if they are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make those not marked as confidential available upon request.

**Platts to discontinue Five Day Rolling Average for oil reports**

Platts, part of S&P Global Energy, will discontinue Five-Day Rolling Averages and Unit of Measure (UOM) Conversions for Crude Oil, Gasoil, Jet Kerosene, Low Sulfur Fuel Oil, High Sulfur Fuel Oil, Naphtha and Gasoline in Oilgram Price Report, US Daily and applicable Fixed Pages, effective Oct. 19, 2026.

The Five-Day Rolling Averages will be replaced with new weekly averages and UOM Conversions, effective Oct. 19, 2026.

| Description | Format | Fixed Page or Publication Name |
|---|---|---|
| Gasoil International | Five Day Rolling Average, Currency-UOM Conversion | PGA0032, PRF0032 |
| Jet Kerosene | Five Day Rolling Average, Currency-UOM Conversion | PGA0035, PRF0035 |
| Gasoil US Market | Five Day Rolling Average, Currency-UOM Conversion | PGA0033, PRF0033 |
| High Sulfur Fuel Oil | Five Day Rolling Average, Currency-UOM Conversion | PGA0039, PRF0039 |
| Naphtha | Five Day Rolling Average, Currency-UOM Conversion | PGA0034, PRF0034 |
| Crude oil, Products | Five Day Rolling Average, Currency-UOM Conversion | Oilgram Price Report |
| Crude oil, Products | Five Day Rolling Average, Currency-UOM Conversion | US Daily |
| Global Low Sulfur Fuel Oil | Five Day Rolling Average | PGA0038, PRF0038 |
| US Gasoline Market | Five Day Rolling Average | MH0036, RF0036 |
| Jet Kerosene | UOM Conversion | PGA0027, PRF0027 |
| Oil | UOM Conversion | Gas Daily |

Please send any feedback or questions to pricegroup@spglobal.com .

For written comments, provide a clear indication if they are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make those not marked as confidential available upon request.

**New Platts Americas new SAF assessments**

The following Platts Americas new SAF assessments have been created under the Market Data categories BF(Agriculture: Biofuels), PL(Oil Products: Latin America) and UG(Oil Products: US Gulf Coast).

They will appear on:

- Publications: Aviation weekly report, Biofuelscan report, Biomass-Based Diesel Report, Brail Fuels daily report, Combustíveis Brazil, Oilgram Price Report, and US Marketscan Report.
- Fixed Pages: Platts Biofuel Alert pages PBF0010, PBF0011, PBF0012, PBF0220, PBF0221 and PGA0158, PGA0166, PGA0167, PGA0168, PGA0450, PGA0451, PGA0480, PGA0483 and PRF0158, PRF0166, PRF0167, PRF0168, PRF0450, PRF0451, PRF0480 and PRF0483

They are scheduled to begin updating on Oct. 1, 2026.

**Platts to launch daily FOB Middle East bitumen assessments from Nov. 2**

Platts, part of S&P Global Energy, will launch daily VG30 and VG40 bitumen spot assessments for FOB Middle East, effective Nov. 2, 2026.

The new assessments will complement Platts' existing daily and weekly bitumen assessments, providing greater price transparency and information in the waterborne trade for the product in the Asia-Pacific and Middle East markets.

Platts will launch two new daily outright assessments and their respective monthly averages. These assessments will reflect bulk viscosity grade 30 and VG40 grade bitumen, as per IS 73:2013 specifications, loading 10-30 days forward from the date of publication in the Middle East.

| Assessment | Quantity | Laycan | UoM |
|---|---|---|---|
| FOB Middle East Bitumen VG30 | 2,500-10,000 mt, bulk | 10-30 days forward | $/mt |
| FOB Middle East Bitumen VG40 | 2,500-10,000 mt, bulk | 10-30 days forward | $/mt |

Pricing information for material with other specifications, such as PEN 60/70, may be considered for the assessments, normalized to the proposed standard.

The assessments will reflect market value at the close of Asian trading at 4:30 pm Singapore time and follow the Singapore publication schedule. Bids, offers and trades reported throughout the day may be considered in the assessment process, with values normalized to the market close at 4:30 pm Singapore time.

This follows a proposal published Sept. 14 and available here.

Please send any questions, comments or feedback to asia_products@spglobal.com, with a copy to pricegroup@spglobal.com.

For written comments, please provide a clear indication if they are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make those not marked as confidential available upon request.

**Platts proposes to amend rollover date of Asian Dated Brent Strip at London close**

Platts, part of S&P Global Energy, is proposing to amend the rollover date of its Asian Dated Brent Strip at London close assessment to the first publication day of the month, from Dec. 1, 2026.

The proposed change, which follows Platts review of historical data sets, would align the ADB Strip at London close assessment with the current rollover date of its ADB Strip at Asia close assessment.

Currently, this assessment, which reflects the forward value of Dated Brent two months ahead of the date of publication at the 4:30 pm London close, rolls over on the 9th of the month.

The assessments affected by this change appear in Crude Oil Marketwire, Asia Pacific/Arab Gulf Marketscan, Oilgram Price Report, Platts Global Alert/ Platts Crude Oil Alert pages 2206, 2213, 2215, 2217, 2219, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2280, 2281, 2558, 2559, and under their price database codes as below:

**Platts proposes to change timestamp and publishing schedule for three Americas dry bulk fertilizer freight assessments**

Platts, part of S&P Global Energy, proposes to change the timestamp and holiday publishing schedule for three Americas dry bulk fertilizer freight assessments from 1630 Sao Paulo Standard Time to 1330 Central Standard Time and change the holiday schedule from the Brazil calendar to the US calendar, effective Oct. 15.

The change will reflect coverage of three routes moving to the US from Sao Paulo.

Further information on Platts pricing holiday schedule can be found here.

Assessments affected by this proposed change are as follows:

| From | To | Symbol | Cargo Size | Currency | UOM | Basis Load Port | Basis Discharge Port |
|---|---|---|---|---|---|---|---|
| US Gulf | Brazil | FUFWQ04 | 40,000 mt | US Dollars | mt | Tampa | Santos |
| Vancouver | Brazil | FUFWN04 | 60,000 mt | US Dollars | mt | Vancouver | Santos |
| Vancouver | China | FUBAP04 | 50,000 mt | US Dollars | mt | Vancouver | Fangcheng |

Bids, offers, trades and indicative values would only be considered for the assessment if they are received before the 1330 Central Standard Time cutoff.

These assessments are published in Platts Fertecon Phosphates Market Report, Platts Fertecon Nitrogen Market Report, Platts Fertecon Sulphur Market Report, Platts Fertecon Potash Market Report, on Fertilizer Alert page FEA1000, and on Platts Shipping Alert page SHP0006 and in the Platts pricing database under the symbol codes above.

Please send all feedback, comments or questions to **shipping@spglobal.com** and **pricegroup@spglobal.com** by Sept. 16, 2024.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

**New delivered Russian ESPO Blend crude assessment symbols**

The following delivered Russian ESPO Blend to Shandong assessment symbols have been created under the Market Data category RP (Crudes: at 16:30 Singapore).

They will appear on:

- Publications - Crude Oil Marketwire report and Oilgram Price Report.
- Fixed Pages - Platts Global Alert pages PGA2238, PGA2239, PGA2205 and PGA2206 and Platts Crude Oil Alert pages PCR2238, PCR2239, PCR2205 and PCR2206.

They are scheduled to begin updating on July 1, 2026.

**Platts revises measurement units, descriptions for FO Licht ethanol prices**

The following Platts FOLicht ethanol prices have had their units of measurement and descriptions updated, as summarized below.

Cubic Meter Pure Alcohol (CPA)

• Type: Volume Unit

• Definition: A unit of volume that measures the volume of pure (100%) alcohol. One CBMPA equals 1 cubic meter (1,000 liters) of pure alcohol. Unlike a standard cubic meter ($m^3$), which measures the total volume of any substance (liquid, gas, or solid), CBMPA refers specifically to the ethanol content, not the total liquid volume.

**Units of measurements and descriptions updated for Platts FOLicht ethanol prices**

The following Platts FOLicht ethanol prices have had their Units of measurements and descriptions updated, as summarized below.

Hectoliter Pure Alcohol (HPA)

• Type: Volume Unit

• Definition: A unit of volume that measures the volume of pure (100%) alcohol. One HLTPA equals 1 hectoliter (100 liters) of pure alcohol. Unlike a standard hectoliter (hL), which measures the total volume of any liquid, HLTPA refers only to the pure alcohol content, regardless of the concentration in the original beverage.

If you have any comments or questions about this announcement, please contact S&P Global Energy Support team or email **support.energy@spglobal.com.**

**Platts proposes to launch weighted indexes for Chicago CBOB, ULSD**

Platts, part of S&P Global Energy, is proposing to launch Chicago basket indexes for gasoline and diesel from March 2, incorporating the independent assessments for the major pipelines and Buckeye Complex and weighting them by trading volume, as well as adding a new, separate assessment for Chicago West Shore and Badger pipeline ULSD.

Feedback from market participants has indicated the need for Chicago-weighted basket indexes that reflect recent volumes traded on the Badger, West Shore, and Wolverine pipelines, as well as the Buckeye Complex.

The proposed weightings would be calculated by tracking recent trades across the West Shore, Badger, and Wolverine pipelines, as well as the Buckeye Complex. Total reported trades would be compiled on a cyclical basis, assuming a minimum volume of 10,000 barrels where not specified. These trades will then be sorted by pipeline to determine the percentage contribution of each component.

The weighted index would be calculated from the average of the differentials to NYMEX futures for the West Shore/Badger pipelines, Wolverine pipeline and BCX assessments, adjusted by their corresponding weightings.

For example, if Platts is assessing Cycle 2 for Chicago ULSD and traded volumes from the previous cycles came out to 20% West Shore and Badger, 30% Wolverine and 50% Buckeye Complex and the pipeline differentials were assessed at plus 2 cents/gal, plus 3 cents/gal and plus 3.50 cents/gal, respectively, the index basket differential would be plus 3.05 cents/gal.

Platts' current assessments for Chicago CBOB and ULSD are as follows:

| Symbol | Name |
|---|---|
| AATHA00 | ULSD Chicago pipeline |
| AGCWC00 | ULSD Chicago Wolverine Pipeline |
| ACBAE00 | ULSD Chicago BCX |
| AAREL00 | Gasoline CBOB Chicago pipeline |
| ACBAA00 | Gasoline CBOB Chicago BCX |
| AGCWA00 | Gasoline CBOB Chicago Wolverine Pipeline |

The proposed Chicago basket indexes would be as follows:

| Name |
|---|
| Gasoline CBOB Chicago Basket |
| ULSD Chicago Basket |

Platts is concurrently seeking feedback on how to incorporate West Shore and Badger into the weighted index when the 1 psi waiver is in place during the summer. More information on how Platts will adjust the West Shore and Badger assessments in accordance with the 1 psi waiver can be found here.

Additionally, Platts seeks feedback on the naming conventions for the proposal. Platts proposes to amend the assessment name from Gasoline CBOB Chicago pipeline to Gasoline CBOB West Shore and Badger pipeline to better represent the products assessed. This change follows the Feb. 3, 2025, removal of the Wolverine Pipeline from the basket underpinning the generic Chicago assessment due to the anticipated removal of the 1 psi waiver in multiple Midwest states and a division in RVP.

Platts is also proposing to launch a separate West Shore/Badger assessment for Chicago ULSD; this would not replace the existing generic assessment, which would remain unchanged. The name of the new assessment would be ULSD Chicago West Shore and Badger Pipeline.

The indexes would appear on PGA pages 350, 351, 154, 24, 482, 410 and 411, as well as in US Marketscan, Oilgram Price Report, and on Platts Connect.

Please send all feedback and comments by Jan. 23 to **americas_products@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

**Platts invites feedback on US gasoline RVP calendar for 2026**

As part of its commitment to open and transparent pricing and product specifications, Platts, part of S&P Global Energy, would like to invite feedback regarding publishing dates and/or cycles for 2026 US gasoline RVP shifts.

The 2026 calendar largely follows 2025 norms, with no notable deviations from prior years. The calendar will be updated throughout the year as more information becomes available.

The shift dates are based on relevant pipeline schedules, historical information, and feedback from market participants.

US Gulf Coast shifts are based on the Colonial Pipeline schedule. US Atlantic Coast shifts are based on Buckeye Pipeline and Colonial Pipeline calendars.

On the West Coast, Los Angeles, San Francisco and Arizona RVP changes are based on Kinder Morgan's SFPP schedule, while Portland and Seattle shifts are based on Olympic Pipeline's calendar.

In the Midwest, Group 3 shifts are based on the ONEOK Pipeline schedule, while Chicago shifts are based on Explorer Pipeline and Buckeye Complex schedules.

The US Environmental Protection Agency removed a waiver in eight Midwestern states that allowed for an additional 1 psi during the summer. Platts will adjust the RVP Calendar for Chicago CBOB in accordance with the implementation of the waiver. More information can be found here.

## Platts Index, Oct 13 (PGA page 115)

| | | | Change |
|---|---|---|---|
| Platts Jet Fuel Index | PJGLO00 | 533.63 | +16.930 |

The Platts Jet Fuel Index is calculated using daily assessments of Jet fuel spot prices in relevant regional centers. These values are compared with average spot prices in the base period (Index value of year 2000 = 100%) to generate a percentage figure reflecting the overall rise or fall in markets compared to the base period.

LSR = Light Straight Run. *=DAP barge. **= Diff to Mont Belvieu Enterprise natural gasoline.

Note: Platts line space assessments reflect the physical trade of gasoline or distillates at two locations agreed upon by the parties along the Colonial Pipeline between Pasadena, Texas, and Linden, New Jersey. The assessments represent the premium or discount paid by a buyer while taking refined product off the line at one location while giving product to the seller at another.
